Fiji are said to be unduly low and the recent poll tax of £1 on every adult is regarded as a heavy burden. The registrations for purposes of the tax have proceeded smoothly. It is also understood that the number of Indians exempted from the tax last year was substantial and there seems no reason to anticipate that the policy of exempting those in whose case it will be a real hardship to levy the tax will not be pursued in the future. Wages in both Fiji and British Guiana are to a large extent dependent on the sugar market, which is at present buoyant. It will be possible to form a more accurate opinion of the position in Fiji when the papers indicating the concessions in favour of Indians in the Colony which have been agreed to by the Colonial Office as a result of the representations by the Colonies Committee of the Govt. of India, are published. The reports of the British Guiana deputation were published on the 21st of January 1924. Towards the end of the month a deputation from the Colony of British Guiana, consisting of Sir Joseph Numan, Kt. and the Honourable Mr J. O. Luckhoo, K.C. arrived in India to re-affirm the scheme of colonisation which these gentlemen had submitted to a committee of the Imperial Legislative Council in February 1920 and which that committee had generally approved. They brought proper credentials from the Government of the Colony and were authorised to place this scheme before the Government of India and the Indian Legislature for consideration. The Government of India agreed to give the deputation facilities to meet the Standing Committee on Emigration of the two Houses of the Indian Legislature and this Committee met the deputation which had, in the meantime, been joined by Messrs M. Panday and C. A. McDunn who respectively represented the Hindu and Muhammadan sections of the resident Indian community on the 19th and 19th of March. The Committee fully discussed the scheme with the deputation but decided to defer making any recommendations to the Government of India until their next meeting which took place on the 26th May 1924. On this occasion the Committee had also the advantage of examining Mr Tewary who was one of the members of the Committee appointed by the Government of India which visited British Guiana in 1922. After full consideration the Standing Emigration Committee reported that while they would be inclined to view with favour the colonisation scheme put forward by the deputation they would, before making any definite recommendation like the Government of India to depute an officer to British Guiana to report on—

- (a) the progress made in providing suitable land for prospective settlers, the steps taken to provide such settlers with materials and skilled assistance to put up residential accommodation and with loans for agricultural development, and the measures instituted to improve the sanitary conditions of the Colony, especially in respect of drain age and water supply,
- (b) the steps, if any taken by the Government of British Guiana to provide facilities for the repatriation of the

Indians already settled in the Colony who are willing to return to India.

- (c) what improvements if any have taken place in the political and economic status of the resident Indian community since the earlier St. Jan deputation visited the colony in 1922 and
- (d) sentiments of the Hindu residents in the matter of cremation of their dead

Kunwar Maharaj Singh, M.A. O.I.C., Bar-at-Law was deputed to British Guiana for this purpose. He proceeded to that Colony in Sept. 1923. His report was received on February 1st and the following notification (No. 240 of the 23rd March 1924) authorising renewal of emigration to British Guiana on terms and conditions which were based on the report and approved by the Standing Committee on Emigration was submitted to the two houses of the Legislature and also approved by them.

(4) Other Parts of the Empire.—In Ceylon, Mauritius and Malaya, the position of Indians has on the whole been satisfactory, and the matters have gone smoothly. The Government of India have now appointed their own Agents in Ceylon and Malaya. The question of the fixation of a standard minimum wage for Indian state labourers in Ceylon and Malaya has been the subject of negotiations between the Govt. of India and the Colonial Governments ever since the emigration of Indian labour to the Colonies for the purpose of unskilled work was declared lawful in 1923 under the provisions of the Indian Emigration Act, 1923. So far as Ceylon is concerned a settlement satisfactory to the Govt. of India and that of Ceylon has been arrived at, i.e. the standard wage and other outstanding questions affecting the interests of the labourers and the draft legislation to give effect to it is before the Ceylon Legislative Council. In regard to Malaya the question is still engaging attention.

In April 1924 the Government of Mauritius requested that emigration to the Colony might be continued for a further period of one year but the Government of India in consultation with the Standing Committee on Emigration decided that consideration of the request should await the results of a local investigation. The Government of Mauritius agreed to receive an officer for the purpose and to give him all facilities and in December 1924 an Indian Officer of Government, Kunwar Maharaj Singh left India to conduct the necessary inquiry.

Kunwar Maharaj Singh's report was published by the Government of India in August 1925. The various recommendations made in the report have been commended to the consideration of the Colonial Government.

In February 1924 the Government of India received a reply from the Colonial Government stating that they accepted the main conclusion formulated by Kunwar Maharaj Singh in regard to the renewal of emigration to Mauritius, i.e. that no more unskilled Indian labour should be sent to Mauritius either in the immediate or near future. With regard to Kunwar Maharaj Singh's

suggestions relating to other matters of interest to the Indian population now resident in the Island. The Colonial Govt. expressed their willingness to give effect to several of them.

In Australia, a Bill was introduced in the Commonwealth Senate on the 12th June 1925 amending sub-section (5) of section 39 of the Commonwealth Electoral Act, 1918-24, by adding after the word "Asia" the words, "(except British India)". This measure gives the Commonwealth franchise to subjects of British India at present domiciled in Australia and is the fruition of the hopes held out by the Commonwealth Government to Mr. Sastry on the occasion of his visit to Australia in 1922. The Bill was passed by the Senate and under it the Indians will enjoy both the State and Commonwealth franchise throughout Australia except in Queensland and in Western Australia, where Indians do not enjoy the suffrage in respect of election for the Lower House.

Emigration to British Guiana—Emigration to British Guiana for the purpose of unskilled work shall be lawful with effect from such date as the Governor-General in Council may with the concurrence of the Governor of British Guiana notify in the *Gazette of India* on the following terms and conditions which shall thereupon become operative—

(1) The family shall be the unit for the purpose of emigration. Not more than 500 families shall be permitted to emigrate and the number of persons included in the said 500 families shall not exceed 1,500.

(2) The emigrants shall either have been recruited by a person licensed for that purpose by and responsible to an officer (hereinafter called the Emigration Commissioner) appointed by the Government of British Guiana or have applied direct to the Emigration Commissioner for an assisted passage and have been accepted by him.

(3) No part of the cost of his recruitment or subsistence during transport shall be recoverable from any emigrant and all expenses in this connection shall be borne by the Government of British Guiana or met from funds at their disposal.

(4) The Government of British Guiana shall at any time when so desired by the Governor-General in Council, admit and give all facilities to an Agent appointed under section 7 of the Act.

(5) If at any time there is no Agent appointed under section 7 of the Act, or if the Agent is absent or unable to perform his duties, the Government of British Guiana shall at the request of the Governor-General in Council appoint a person to perform temporarily the duties of the Agent.

(6) Prior to the arrival of the emigrants a Settlement Commission shall be appointed in British Guiana to select and prepare suitable agricultural land for the emigrants and generally to supervise their employment. The Agent referred to in clause (4) shall, on appointment, be a member of such Commission.

(7) The Government of British Guiana shall offer to each family for its separate employment a holding comprising not less than five acres of

suitable agricultural land prepared for cultivation on the terms hereinafter set out in a locality which shall be healthy and shall have an adequate supply of good drinking water. All expenses in connection with the preparation of the holdings shall be borne by the Government of British Guiana and shall in no case be recoverable from an emigrant.

The annual rent of the holding shall be fixed by the Settlement Commission at a rate not exceeding the lowest rate paid in the locality.

After an emigrant has been in occupation of a holding for three years, he shall, provided that he has cultivated a portion of the holding either by himself or through some member of his family be entitled to a grant of the holding on payment at any time during the ensuing four years of such fees not exceeding 24 dollars as may be fixed by the Settlement Commission.

On the expiry of seven years from the date of the commencement of his occupation of a holding an emigrant shall acquire absolute ownership in the holding provided that he has paid the rent and fees referred to in the foregoing paragraphs of this clause and has brought under cultivation either by himself or by some member of his family half the area of his holding.

(8) An emigrant on arrival in British Guiana shall be housed and maintained without charge by the Government of British Guiana for at least one month.

(9) If any emigrant so requires loans shall be made to him for maintenance, house accommodation, payment of rent and for agricultural purposes generally. Free medical assistance and free skilled supervision shall be provided.

(10) Any emigrant shall be entitled to repatriation at the expense of the Government of British Guiana to the place of his former residence in India on the expiry of 7 years from the date of his arrival in British Guiana.

Any emigrant shall be entitled to repatriation at the expense of the Government of British Guiana to the place of his former residence in India on the expiry of more than 5 and not more than 6 years from the date of his arrival in British Guiana on payment to the Government of British Guiana of half of the cost of his passage from his residence in India to British Guiana.

Any emigrant shall be entitled to repatriation at the expense of the Government of British Guiana to the place of his former residence in India on the expiry of more than 6 and not more than 7 years from the date of his arrival in British Guiana on payment to the Government of British Guiana of quarter of the cost of his passage from his residence in India to British Guiana.

(11) Notwithstanding anything contained in the last preceding clause the Government of British Guiana on the request of an Agent appointed under section 7 of the Act shall repatriate at its own expense and without any payment by or on behalf of the emigrant to the place of his former residence in India any emigrant at any time after his arrival in British Guiana.

(12) An emigrant shall be at liberty at any time after his arrival in British Guiana to take up work or employment other than or in addition to the cultivation of a holding on lease from the Settlement Commission.

(13) The ordinance enjoining compulsory education in British Guiana shall be enforced to the same extent in the case of Indian children as in the case of children belonging to other communities.

(14) Boards of arbitration in regard to wages shall be established before the arrival of the emigrants and Indians shall be adequately represented on such boards.

(15) Any Indian who has emigrated to British Guiana before the date of this notification and under any agreement in force at the date of this notification is entitled to an assisted return passage to India shall not be required to pay more than 25 per cent of the excess in the cost of his return passage and clothing over the

cost of such passage and clothing at the time of his first arrival in the colony.

(16) Any Indian who has emigrated to British Guiana before the date of this notification and has at the date of this notification become or thereafter becomes destitute shall be entitled to be repatriated to India at the expense of the Government of British Guiana without being further required to prove that he has become incapable of labour.

(17) The Government of British Guiana shall furnish such periodical reports and returns as may be required from time to time by the Government of India in respect of the welfare of the persons emigrating to the Colony in accordance with this notification.

Indians in Great Britain.

More than sixty years have gone by since the Parsi community, in the persons of the late Dadabhai Naoroji and other members of the firm of Cama & Co., led the way in the sojourn of Indians in England for business purposes. This lead has since maintained though there are both Hindu and Mohammedan business men firmly established there. Nor are the professions unrepresented, for there are in London and elsewhere practising barristers, solicitors and medical men of Indian birth. Three Indians (all belonging to the Parsee community) have sat in the House of Commons. An Indian has served since 1910 on the Judicial Committee of the Privy Council and a second Indian (Lord Sinha) took his seat there on in 1928. Three Indians are on the Secretary of State's Council. In 1919 Lord Sinha was the first Indian to be raised to the peerage and to be appointed a member of the Home Government. In the spring of 1923 Mr (now Sir) Dadiba Dada was appointed High Commissioner for India being the first Indian to hold the office. He resigned towards the end of 1924 to be succeeded by Sir Atul Chatterjee previously a member of the Government of India. The early years of the present century saw the gathering of a new Indian element in permanent residence—that of retired officials and business men or people of independent means who from preference or in order to have their children educated in England, leave the land of their birth and seldom if ever visit it again. Further the stream of Indian summer visitors includes wealthy people who come regularly. There is an Indian Social Club founded in 1912, with Sir M. M. Bhownagree as president which arranges for dinners and other functions to celebrate Indian festivals or to honour Indian visitors of special distinction. Sectionally, however, the only Indian community to be fully organised is that of the Parsees. They have an incorporated and well-endowed Parsi Association of Europe, and have established "Zoroastrian House" (168, Cromwell-road, S.W. 3) as a communal centre. A later development of great value in promoting social intercourse and good relation has been the formation of the British-Indian Union, 10 Grosvenor Gardens, S.W. 1 under the presidency

of H. R. H. the Duke of Connaught and with Lord Reading as Chairman.

The Indian Pavilion at the British Empire Exhibition in 1924 and 1925 with its gleaming towers and minarets and its cool fountain-filled forecourt was one of the most conspicuous and admired architectural features of Wembley, and the great popularity of the section was shown by the crowded state of the more attractive courts day after day. The continuous education of English, Colonial and foreign visitors in regard to the products and artware of India was of great value and did much to spread a vogue for Indian artistic workmanship. This success led to proposals for a permanent India House in some central position to be the office of the High Commissioner and the Trade Commissioner and where a show of products and artware would replace the small though choice exhibition of Indian wares at the present office of the High Commissioner for India in Grosvenor Gardens, S.W. 1.

The Students.

Under normal conditions it is the student community which constitutes the greatly preponderating element and creates an Indian problem. Its numbers multiplied ten or twelve fold in the quarter of a century before the war. After a very considerable temporary check caused by the Great War the number rapidly expanded from 1919 in spite of pressure on college accommodation. In addition to the ordinary graduate or under-graduate student, there are some youths of good family, including heirs of Native States, admitted into our public schools such as Eton and Harrow. There are over 800 Indians at the Inns of Court. Since the war there has been a welcome increase in the number of technical and industrial students. Altogether including technical and medical students, there are fully 2,000 young Indians (some five per cent of their women) in London, Edinburgh, Cambridge, Oxford, Glasgow, Manchester, Birmingham, Leeds, Sheffield, Liverpool and a few other centres. London absorbs about half the total.

The Advisers.

It is well known that until a few years ago the young Indian apart from inadequately

supported unofficial effort and the chance of coming under the influence of English friends of their families, were practically left to their own devices. But in April 1909 Lord Morley, created for their benefit a Bureau of Information and appointed Dr (now Sir) T. W. Arnold to the charge of it under the title of Educational Adviser. The Bureau was located at 21 Cromwell-road, together with the National Indian Association and the Northbrook Society which were thus given spacious quarters for their social work among the young men. (For Burmese students distinct club accommodation is provided, partly by subventions from Indian revenues, in the commodious Albion House, St. Peter's Square Hammer-smith, W 6.) In India provincial advisory committees exist to help and advise intending students, but in some instances have been replaced by University Committees. The work of the Bureau rapidly expanded, and in consequence Lord Crewe in 1912 re-organised the arrangements under the general charge of a Secretary for Indian students, Mr (now Sir) O. E. Mallet who resigned at the close of 1916. He was succeeded by Dr Arnold under the designation of Educational Adviser for Indian Students to the Secretary of State. Mr N. O. Sen followed Dr Arnold as Local Adviser in London. At Oxford, the Oriental Delegation and at Cambridge the Inter-Collegiate Committee have been instituted to deal with Oriental students generally whilst Local Advisers for Indian students have been appointed at Manchester, Edinburgh and Glasgow.

These arrangements underwent far reaching revision in the autumn of 1920 in connection with the setting up, under the Act of the previous year of a High Commissionership for India in the United Kingdom. The agency work Sir William Meyer took over from the Secretary of State included that connected with Indian students. Sir T. W. Arnold accepted an appointment long pressed upon him as Professor of Arabic at the School of Oriental Studies and the High Commissioner appointed Mr N. O. Sen and Dr Thomas Quayle as Joint Secretaries for the Education Department. The administrative work hitherto divided between the India Office and 21 Cromwell road was consolidated at the offices of the High Commissioner in Grosvenor-gardens, thereby obviating a good deal of duplication of files and papers.

The whole situation was investigated by a committee of inquiry which set in 1921 under the chairmanship of Lord Lytton. Arrangements had been made for the Committee to continue their investigations in India in the cold weather of 1921-22 but were abandoned in consequence of the refusal of the Legislative Assembly to vote the necessary grant. This largely accounts for the somewhat tentative form of the recommendations of the unanimous report published in October 1922. The opinion was expressed that the only permanent solution of the problem is to be found in the development of education in India. Attention was invited to the distribution of the number of Indian students proceeding abroad that would result from giving effect to recommendations made for such development by previous commissions, and by the establishment

of an Indian Bar. The Committee held that it should be possible to secure admission both to British universities and, subject to certain reservations to the works of manufacturing firms in Great Britain for all Indian students competent to profit by the facilities afforded, provided that some machinery existed to ensure their distribution to the places best suited to their requirements. Subsequently a committee presided over by Sir Edward Chamberlain considered the creation of Indian Bars, which should have the effect of much reducing the number of Indians going to the Inns of Court. An Act for the purpose was passed by the Indian Legislature in 1926.

The students have hosts of non-official friends and helpers and the report suggested that there should be a conference of representatives of all organisations interested in the social and intellectual welfare of young Indians in Great Britain to discuss the best means for co-ordinating their efforts. Accordingly the High Commissioner held a conference in July 1925 when plans were formulated to help to meet the needs of students more particularly in respect to suitable boarding accommodation in London. The subject had been previously discussed at a meeting of the East India Association (April 27 1925) when a paper was read by Mr F. H. Brown. The conference came to the conclusion that, since non-official effort admittedly does not meet the need fully the hostel and club at 21 Cromwell road should be maintained more particularly to provide accommodation for new comers. A small committee with Mr A. D. Bonarjee (Warden of 21 Cromwell-Road) as Secretary was established to assist students in obtaining suitable accommodation.

Under the presidency of Lord Hawke an Indian Gynkhana Club in 1921 acquired its own sports ground at Osterley the total cost of purchase and equipment being estimated at £15,000. Generous gifts were made by some Ruling Princes and others, particularly the Maharaja of Patiala, but further help is required. The cricket eleven of the Club has an excellent record in matches at Lords and the Oval and with suburban clubs.

A notable development of 1920 was the opening of the Red Triangle Shakespeare Hut in Bloomsbury off Gower Street, as a union and hostel for Indian and Ceylonese students up to the number of 500. The hostel was removed to permanent premises 108-112 Gower-street, close to University College in the autumn of 1923. It is Indian both in conception and control the warden Mr P. D. Rungtadhan and committee being responsible not to the National Council of Y. M. C. A. in London but to the Indian National Council in Calcutta. While the organisation has a definitely moral and spiritual as well as a social purpose, it is not a proselytising agency. There is a steady average of nearly 500 members, and the hostel is exceptionally fortunate in securing the voluntary services of men and women of great distinction in many fields for the regular Sunday afternoon and other lectures. The cost of the building and furnishing has been met and the question of extending the hostel accommodation is under consideration.

Societies : Literary, Scientific and Social.

AGRICULTURAL AND HORTICULTURAL SOCIETY OF INDIA (Calcutta).—Founded 1880. A Class Annual subscription Rs 32. K. tradofoe Ra 8 B Class Annual subscription Rs 12. Secretary S Percy Lancaster F.L.S. F.R.S. M.R.A.S. 1 Alipore Road, Alipore.

AGRI HORTICULTURAL SOCIETY OF BURMA.—Superintendent B. E. Cooper Esq. F.R.H.S. Secretary O. A. Chiffening Agri-Horticultural Gardens, Kandawgley Rangoon.

AGRI HORTICULTURAL SOCIETY OF MADRAS.—Established 1836. Quarterly subscription for members in Class A Rs. 7 in Class B Rs. 3. President H. E. The Rt. Hon. Vis. count Goschen *Chairman*. The Hon. Quettow Sir William Phillips Kt. 108. *Hon. Secretary* Mr. H. A. B. Vernon. I.C.S. *Hon. Treasurer* Dewan Bahadur G. Narsinsawmy Chetty Garu. Teynampett. 9 W. Madras. *Nursery Superintendent* Mr. N. Ramalingam. *Nalker Foreman Ornamental Garden* Mr. N. Munisawmy Nalker.

ANGLO INDIAN LEAGUE.—To protect the interests of Anglo-Indians. President Dr. H. W. B. Moreno. Ph.D. *Hon. Secretary*—Mr. A. McDonald. B.A. B.L. *Hon. Treasurer*—Mr. S. V. Cowen. Office 2, Wellesley Square Calcutta.

ANTHROPOLOGICAL SOCIETY OF BOMBAY.—Founded 1886 to promote the prosecution of Anthropological research in India to correspond with Anthropological Societies throughout the world to hold monthly meetings for reading and discussing papers and to publish a journal containing the transactions of the Society. Annual subscription Rs 10. President Shams ul Ulma. Dr. Jivanji Jamshedji Modi, B.A. Ph.D. O.I.E. 172 Hornby Road, Bombay. *Hon. Secretary*—Principal J. Mackenzie. M.A.

BURNES MATHEMATICAL SOCIETY.—Founded in 1918 for the encouragement and promotion of research in the various branches of Pure and Applied Mathematics, and in the History of Mathematics. It conducts a journal 'The Proceedings of the Burnes Mathematical Society' in which original papers on Mathematics are published and maintains a library. There are about 60 members from all parts of India. Admission fee Rs 10. Annual subscription Rs 15 (resident members) and Rs 5 (non resident members). *Patron* Sir William Burnes, K.C.B.I. K.O.I.E. *Life President* Dr. Ganesh Prasad, M.A. (Cantab). D.Sc. *Secretary* Prof. Ganesh Prasad, M.Sc. *Treasurer* Prof. Syamacharan De. M.A.

BHANDARKAR ORIENTAL RESEARCH INSTITUTE POONA.—The Institute was inaugurated on the 6th of July 1917 the 80th birthday of late Sir B. G. Bhandarkar at the hands of H. E. Lord Willington, who became its first President. Its objects are to publish critical editions of texts and original works bearing on Oriental Antiquities to provide an up-to-date Oriental Library to train students in the methods of research and to act as an information bureau on all points connected with Oriental Studies. The valuable library of Sir B. G. Bhandarkar which he

had bequeathed already to the Institute was handed over after his demise by his executors to the Institute and is now located in the Central Hall of the Institute. Since the 1st of April 1918 the Government of Bombay have transferred to the Institute the unique collection of manuscripts at the Deccan College together with a maintenance grant of Rs. 3,000 a year. Government have likewise entrusted to the Institute a grant of Rs. 12,000 a year for the publication of the Government Oriental Series. The Institute has undertaken to edit the *Mahabharata* critically at the request of the Chief of Anundhi who has promised a grant of Rs. 5,000 annually for that purpose. Grants are being received from the University of Bombay and the Governments of Burma, Baroda and Madras. The Institute has a journal called *Annals of the Bhandarkar Institute* published four times a year. It also held under its auspices the First Oriental Conference on the 5th 6th and 7th of November 1919 under the patronage of H. E. Sir George Lloyd and the presidency of Sir B. G. Bhandarkar. Owing to liberal donations from the Tatas and the Jain community the Institute is housed in a fine building near the hills behind the Home of the Servants of India Society. Minimum membership dues Rs 10 a year or Rs 100 compounded for life. Members can borrow books from the library and get the Journal free and other publications at concession rates. *Secretary* Dr. B. K. Bhalvarkar. M.A. Ph.D. (Harvard).

BOMBAY ART SOCIETY.—Founded 1888, to promote and encourage Art by exhibitions of Pictures and Applied Arts, and to assist in the establishment and maintenance of a permanent gallery for pictures and other works of Art. Annual exhibition usually held every January. Annual subscription Rs. 10. Life member Rs 100. *Secretary* B. V. Bhandarkar. Bandra, Bombay.

BOMBAY BRANCH OF THE ROYAL ASIATIC SOCIETY.—Founded 1804 to investigate and encourage Oriental Arts, Sciences and Literature. Annual subscription Rs. 20. *Secretary* Dr. Edward Parker. Town Hall, Bombay.

BOMBAY NATURAL HISTORY SOCIETY.—Founded 1886, to promote the study of Natural History in all its branches. The Society has a membership of about 1,700 and a museum with a representative collection of the different vertebrates and invertebrates found in the Indian Empire and Ceylon. In 1921 the Society was entrusted with the management of the Natural History Section of the Prince of Wales Museum and a great part of the Society's collections have been transferred to that Museum. A Journal is published quarterly which contains articles on natural history and sport as well as descriptions of new species and local lists of different orders. In the more recent numbers, serial articles on game birds, common snakes, and common butterflies have been appearing. Annual subscription Rs 25. Entrance fee Rs 20. *President*, H. E. The Viceroy of India, H. R. H. the Prince of

Wale, Vice-President, H. H. The Maharaja of Oudh, G.O.I. H. H. the Maharaja of Jodhpur, K.G.I. K.C.V.O. H. H. the Maharaja of Bawa, K.O.I. H. H. the Maharaja of Dhar and Mr. F. V. Evans Liverpool, President, H. E. The Rt. Hon. Sir Leslie Wilson, P.C., G.O.I., C.M.G., D.S.O., Vice Presidents: The Hon. Mr. J. E. R. Hooton, G.O.I., K.C.S., and H. H. the Maharaja of Oudh, G.O.I. G.O.I. Rev. E. Blatter, B.A., Ph.D. F.R.S. Honorary Secretary: Sir Reginald Spence, Kt., F.R.S. Treasurer: S. H. Prater, C.M.E.S. Asst. Treasurer: O. A. McOmnan Head Clerk: Mr. A. F. Fernandes, Offices 6, Apollo Street, Bombay

BRITISH AND FOREIGN BIBLE SOCIETY—Since 1811 the British and Foreign Bible Society has been at work in this country. It has 6 Auxiliaries in India and an Agency in Burma. The first Auxiliary was established in Calcutta, in 1811, then followed the Bombay Auxiliary in 1818, the Madras Auxiliary in 1820, the North India Auxiliary in 1845 the Punjab Auxiliary in 1843 the Bangalore Auxiliary in 1876, while the Burma Agency was founded in 1899. The Bible or some portion of it is now to be had

in nearly 100 different Indian languages and dialects and the circulation throughout India and Burma reached nearly 8,00,000 copies in 1924. The Bibles, Testaments, and Portions in the various vernaculars are sold at rates which the very poorest can pay and at considerable loss to the Society. Grams of English Scriptures are made to Students who pass University examinations, as under—

The New Testament and Psalms to Matriculates.

Portions of Scriptures in the important vernaculars have been prepared in raised type for the use of the Blind and large grants of money are annually given to the different Missions, to enable them to carry on Colportage and Bible Women's work. Besides the British and Foreign Bible Society there is Bible work carried on in India, and Burma in a much smaller way by the Bible Translation Society—which is connected with the Baptist Missionary Society—the National Bible Society of Scotland, the American Bible Society and the Tranquebar Tamil Bible Society.

The following table shows the growth in the British & Foreign Bible Society's work during the past few years in India and Burma:—

TABLE OF CIRCULATION OF THE B.F.B.S. IN INDIA.

Auxiliaries.	1925	1924	1923	1922
Calcutta	122,781	107,084	148,026	111,567
Bombay	164,820	161,263	133,608	181,888
Madras	238,371	215,247	221,681	249,076
Bangalore	30,315	29,088	45,099	35,866
North India	138,238	144,960	191,602	168,091
Punjab	81,598	61,781	65,578	71,269
Burma	71,228	63,472	55,832	83,306
Total copies of Scriptures	812,446	782,865	831,516	886,278

These returns do not include the copies which any Auxiliary has supplied to London or to other Auxiliaries and agencies during the year.

BRITISH INDIAN PEOPLE'S ASSOCIATION—To protect the interests of Down-trodden Europeans Anglo-Indians and Indians alike. President: Raja Kishore Chao Law G.I.N. M.L.O. Joint Hon. Secretaries: Dr. H. W. B. Moreno, Ph.D. Office 2, Wellesley Square Calcutta.

BRITISH MEDICAL ASSOCIATION (Bombay Branch)—Founded 1884, to promote Medical and the Allied Sciences and the maintenance of the honour and interests of the Medical Profession.

BOMBAY MEDICAL UNION—Founded 1885 to promote friendly intercourse and exchange of views and experiences between its members and to maintain the interest and status of the

medical profession in Bombay. The entrance fee for Resident members Rs. 5 monthly subscription Rs. 2. Absent members Rs. 1, and non-resident members yearly subscription Rs. 5. Hon. President: Dr. V. Bhajekar, Hon. Vice Presidents: Dr. S. H. Banker and Dr. Deshmukh, Hon. Librarian: Dr. S. Popat and Dr. Lam, Hon. Treasurer: Dr. P. T. Patel and Hon. Secretaries: Dr. S. P. Kapadia and J. E. Spencer Top Floor Alke Building Hornby Road, Bombay.

BOMBAY SANITARY ASSOCIATION—Founded to create an educated public opinion with regard to sanitary matters in general, (b) to diffuse the knowledge of sanitation and hygiene generally, and of the prevention of

the spread of disease amongst all classes of people by means of lectures, lectures and practical demonstrations, and, if possible by holding classes and examinations, (c) to promote sanitary science by giving prizes, rewards or medals to those who may by diligent application add to our knowledge in sanitary science by original research or otherwise, (d) to arrange for homely talk or simple practical lectures for mothers and girls in the various localities and different shawls, provided the people in such localities or shawls give facilities. The Sanitary Institute Building in Princess Street which has lately been built by the Association at a cost of nearly Rs 1,00,000 the foundation stone of which was laid by Lady Wellington in March, 1914, and opened in March, 1915 is a large and handsome structure with a large Lecture Hall Library Museum, etc., and also provides accommodation for King George V Anti-Tuberculous League Dispensary transferred to the Municipality in 1934 and Museum and the office of the Assistant Health Officer C and D Wards and the Vaccination Station. *Hon Secretary* Dr J E Sandilands *M.C.* *M.A.* *M.D.* *Executive Health Officer* Bombay

INDIA SUNDAY SCHOOL UNION The India Sunday School is an interdenominational organization having as its object the establishment and strengthening of Christian Sunday Schools throughout the Indian Empire. It embraces a number of Auxiliaries which are generally associated with particular language areas. Both in the local Unions and in the Central organization, help is given by foreign and Indian workers of almost all denominations.

The I S S U was founded in Allahabad in 1876 and reorganised in 1922. Its General Committee is made up of the officers representing the various Christian Councils, the Auxiliary Union and the World Sunday School Association and works in India appointed by the W S S A. Funds are liberally provided for the support of by the British Committee of the W S S A and by the International Bible Reading Association. The Headquarters of the Union is in Coonoor. A Teacher Training Institution was opened in 1923 in Coonoor Nilgiris.

The chief activities of the Union are—(1) The publication and sale of literature in English and various vernaculars (2) The training of teachers by means of lecture courses and help in private study (3) The arrangement of examinations in English and vernaculars in connection with the various courses provided for which certificates, medals and Scripture awards are given (4) The encouragement of Daily Bible Reading as an aid to the spiritual life (5) The encouragement

ment of teachers and other workers by means of conventions and conferences in connection with the Auxiliaries. The Teacher Training Department is in the hands of Mr H A Annett Keswick Cottage Coonoor

The Union publishes the following quarterly periodicals in English —

Notes for Teachers of Junior Scholars on the Brit International Course; Notes for Teachers of Senior Scholars on the Amer International Course; and a Journal for Teachers containing reports, articles and reviews.

Approximately 15 000 schools with 600 000 scholars and 20 000 teachers are touched by these activities.

The Officers of the Union are--*President*
Bishop J W Robinson M E Church Delhi
Treasurer W H Warren Madras *General*
Secretary J A Innett Coonoor

INSTITUTION OF ENGINEERS (INDIA)—The organization of the Institution commenced in 1919 and it was inaugurated by H. E. Lord Chelmsford in early in 1921. Its object is to promote and advance the science, practice and business of engineering in India on the same lines as are adopted by the Institutions of Civil Mechanical and Electrical Engineers in the United Kingdom. The standard of qualification is the same. Membership is divided into three classes, viz. Members, Associate Members and Associates and there is an additional class for students. *President* W. H. Neilson *Chairman* F. D. Secretary J. Lowell Williams *Office* 6-8 Esplanade Row East P. O. Box 203 Calcutta.

It distributes a monthly journal to members and undertakes developing printing and enlarging work from its members only. There are excellent work room apparatus and reading room at the Society. *Headquarters* at 209 Lower Circular Road Calcutta. *Hon. Secretary* A. Henry 229 Lower Circular Road Calcutta.

POONA SEVA SADAN SOCIETY—This Institution was started in 1909 by the late Mrs. Ramabai Ranade, Mr. G. K. Devadhar and a few other ladies and gentlemen in Poona and registered in 1917. It is now working independently though for a few years in the beginning, it was conducted as a branch of the Bombay Seva Sadan. Its main object is to make women self-reliant and to train them for missionary work undertaking educational and medical activities for their sisters and brethren especially the former in backward areas and working on a non-sectarian basis. Nominal fees are now being charged for instruction

except for the Male Classes for Special Classes in English, and for High school classes etc. There are eight different departments subdivided into 67 classes. Arrangements are made for training Nurses and Midwives and women Sub-Assistant Surgeons at the Sassoon Hospital Poona and a hostel is maintained for the former and two for those attending the Sub-Assistant Surgeons' Classes. The number in these three hostels is now about 85 to 90. Besides there is a full-fledged training College named after Bai Motilal Wadia with about 51 students for being trained as Mistresses for Vernacular schools. This College is probably the only college in India maintained by a non-official non-Christian missionary body teaching the full course. The results of the Certificate Examinations held in the year 1926-27 under the authority of the local Government Training College for Women were as follows: old II year 13 and I year senior 2. The total number of certificates granted so far is 335 now. The Practising School for little girls attached to the Training College has now eleven classes with 263 students reading up to the Marathi VI Standard. English being taught in the top three standards. Primary (Class) for grown-up women teaching up to the Marathi V Standard are attended by about 150 women. It is here that poor women are recruited for training as a teacher, nurse, midwife or doctor. Special classes for teaching English, First Aid, Home Nursing were attended by about 80 students. The Music Classes by 118 students and the Work room Classes for teaching Sewing, Embroidery, Basketry and Weaving by 105 women. Thus, the total number of pupils is 908 to-day. There are two branches of the Society started at Satara and Baramati which named after Lady Vishal is Thakerey, the wife of the greatest helper of the Society so far the late Sir Vishaldas D. Thakerey. Besides there are branches started at Bomlay, Solapur, Ahmednagar, Alibay, Nashik, Nagpur, Gwalior for either educational or medical work or for both. Thus the total number of women and girls including 100 duplications on the rolls at these various Centres of the Society is nearly 1419. There are in Poona six hostels three of which are located at the headquarters and the other three in the Baste, a Peth and the Somwar Peth for Nurses, etc. under training at the Sassoon Hospital. The number of resident students is above 200 in these six hostels. One of the three hostels at the headquarters is intended for women of depressed classes. The number of these women at present is 12. In connection with the medical branch a committee has been formed in England, which will enable the Society to send fully qualified Nurses there to undergo further training. There is an active Infant Welfare centre and ante-natal clinics with the average daily attendance of 60 expectant mothers. The Society is extending its medical activities by undertaking with the help of two charitable Trusts in Bombay to work out the scheme of Maternity, Infant Welfare, Child Welfare and General nursing for the women and children of the Bhatia Community under the supervision of Mr. G. K. Devadhar, the organizer of the scheme. This

scheme has a Maternity Hospital and Nursing Home, and three Infant Welfare centres. Besides these Maternity Hospitals and Nursing Homes at Ahmednagar and Alibag under the management of the society in connection with other organizations. Now Her Excellency the Countess of Reading Lady Wilson, Lady Lloyd, Lady Willington Lady Sydenham and Lady Chelmsford are Hon Patronesses. The institution is largely dependent upon public contributions and Government assistance. The annual expenditure roughly comes up now to Rs. 2,50,000. *President* Shrimant Southbhyavadi the Raniabeh of Sangli. *Honorary Organizer and General Secretary* Mr Gopal Krishna Devadhar, M.A., C.I.E., *Local Secretary and Treasurer* Mrs Yamunabai Bhat. *Lady Superintendent and Secretary for Development and Collections* Mrs Janaki bai Bhat (Kaiser I Hind Nivert Medal) *Hon Secretary Auring and Medical Education Committee* Rao Bahadur Dr P V Shikhhare I.M. & S (on leave) Dr V O Gokhale, I.M. & S and Dr N L Ranade B.A., M.B.B.S (acting)

BANCOOK LITERARY SOCIETY—*President* H E The Governor of Burma *Hon Secretary*, Mrs C Peacock 17, York Road

REGENERATION CLUB INSTITUTE—This Institution was started in 1912-13 by the members of the Ismaili Dhami (religious) Library in Bombay. Its central office is in Bombay with branches at Ahmedabad, Ahmednagar, Karachi, Hyderabad (Sindh) Poona Warangal etc. The aims and objects of the society are to elevate and improve the social economic and spiritual condition of the oppressed and poor classes of people and with that intent to found primary schools, associations and such departments and to take all constructive means to achieve the above objects. The Institute has 2 orphanages with 160 inmates industrial works domestic industries sales depots Clinics, Libraries etc. It also issues two Anglo-Vernacular papers *The Imamiya* (a weekly) and *The Nisari* (a monthly). *Hon. Secretary*, Mr Hasan Lalji Devraj

ROYAL SOCIETY OF ARTS, INDIAN SECTION—This Society was founded in London in 1754. Its recently published history by Sir Henry Trueman Wood, late Secretary of the Society, gives the following account of the Indian Section. In 1857, a proposition was made by Mr Hyde Clarke, who wrote to the Council suggesting that "a special section be formed for India, another

for Australia, one for English America and so on. It was suggested that the Indian Section should meet once a fortnight for the reading of papers. Nothing came of the suggestion until ten years later when Mr Hyde Clarke returned to England, and in 1868 he renewed his proposal but only proposing the formation of a Committee which should organize conferences on Indian subjects. This time the suggestion was taken up more warmly. Mr Hyde Clarke himself was placed on the Council and the Indian Conference, which soon developed into the Indian Section, were started. "The Indian Section thus established became a most important department of the Society. It has had great results in India by spreading information as to the directions which the development of Indian manufactures and Indian products could most profitably take and in England by giving similar information as to the industrial resources and progress of India itself. The Section has received great help from the Indian press and it has in return been of service to the Indian press in supplying useful information to it. It has been of great value to the Society itself as the means by which many members have been added to its list, so that in fact thanks to a very large extent to the work of the Indian Section and of the allied section for the Colonies, a large proportion of the present number of members come from the dependencies of the Empire abroad." *Secretary of the Society* G K Menzies, M.A. *Secretary of the Indian and Dominions and Colonies Sections* W Perry, B.A., I.O.S. (retired) 18 John Street, Adelphi London W O 2

SERVANTS OF INDIA SOCIETY—The Servants of India Society which was founded by the late Mr Gopal Krishna Gokhale, C.I.E. in 1906 has its Head-quarters in Poona and its objects are "to train national missionaries for the service of India and to promote by all constitutional means the true interests of the Indian people." Its government is vested in the first member or President and a Council. On the death of Mr Gokhale in February 1915, the Right Hon'ble Mr V S Srinivasa Sastri was elected President and continues to hold the office being duly re-elected twice. Besides the headquarters, it has at present four branches, viz (1) in Bombay (2) in Madras, (3) in the United Provinces (4) in the Central Provinces. Moreover, it has several additional centres of its activities under the branches such as Calicut Mangalore, Lucknow, Lahore and Cuttack in Orissa. Each Branch consists of ordinary members members under training and permanent assistants who work under the direction of a Senior Member. Mr N M Joshi a nominated member of the Legislative Assembly representing labour interests. The branches engage both in propagandist and active work of political educational social rural credit co-operative and philanthropic character in which they secure the help of a large number of voluntary workers, both men and women. A fair idea of the work of a branch can be had from a brief description of the operations of the Bombay Branch whose members

have so far undertaken activities in various fields. (1) Social purity like the Holika Samskara of Bombay, (2) Social reform organisation under the auspices of the Indian National Social Conference, (3) rousing public opinion about elementary education (4) promotion of the cause of literacy and education of Indian women by building up institutions like the Poona Seva Sadan, with 1,095 (including duplications) of about 150) women and girl pupils in nearly 58 classes of its 8 departments and five hostels in the city Mr G. K. Devadhar M.A. is its Hon. Organizer and General Secretary (5) Social Service as carried out by the Social Service League of Bombay of which Mr N. M. Joshi, B.A. is the Honorary General Secretary, (6) spread of co-operative movement among the agriculturists and compositors in the city of Poona and mill-hands in Bombay The co-operative societies as at Hadapsar and other villages around Poona started for the benefit of these poor people number over 85 with a total membership of over 1,800 capital of nearly three lakhs and a total turn-over of five lakhs per year Nineteen of these societies which are in Bombay for poor labouring classes are so conducted as to free their members entirely from their chronic indebtedness Their membership of the latter group consists of sweepers scavengers mill-hands numbering above 550 and debt amounting to nearly three lakhs of rupees have been cleared off Moreover educational work was organised by starting a Co-operative Quarterly and by starting a Co-operative Secretaries Training Class in Bombay for 50 Secretaries from the various districts for three years These are now transferred to the Central Co-operative Institute Bombay, of which Mr G. K. Devadhar is now the Vice-President These three experiments on such a scale were the first of their kind in India (7) relief work connected with wide-spread calamities by organizing the Plague Relief Committee of Poona which succeeded in making inoculation popular in the Deccan, the Salwana Fire Relief Committee which arrange for the Relief to sufferers for five years and by undertaking a scheme of non-official relief during the famines of 1907-08 and 1914 in the United Provinces, the famine in Gujarat and Kashmir of 1911-12 and the famine of 1913 in the district of Ahmednagar, and that of 1918-1919 in Gujarat and the Deccan, and in 1920 in Orissa near Puri, (8) Influenza relief was well organized by members of these associations in Bombay and Poona. Since the outbreak of the Malabar Rebellion in August 1921 the members of the Society organized the work of relief which was administered with the help of outside organisations like the Poona Seva Sadan, the Y. M. C. A., etc. and in collecting funds from all over the country especially Bombay Thus from all over the country substantial help to the extent of nearly Rs. 3,50,000 was collected For the first six months about 19 camps with nearly 27,000 men, women and children of all castes and creeds were maintained very efficiently and during the later six months thousands of

Hindu and Moplah families were supported in their villages in the disturbed and the destroyed parts of the district of Malabar This work was closed in the beginning of October 1922 Mr G. K. Devadhar as Vice-President of the Malabar Central Relief Committee directed the work on behalf of the Servants of India Society In 1924 the Society organized the South Indian Flood Relief Central Fund in Bombay with a view to giving relief to the poor people especially the Panchamas, who had suffered from unprecedented goods in the districts of Malabar Trichinopoly Coimbatore Tanjore and the Indian States of Mysore Travancore and Cochin Mr G. K. Devadhar is the Hon. General Secretary and Treasurer and Mr C. S. Desai one of the Hon. Secretaries of the Fund The distribution of relief was carried on with the help of Y. M. C. A. workers in the different districts, (9) organizing public opinion on the question of Indians to South Africa, (10) its political work is conducted strictly on constitutional lines and thus it was able to start District Congress Committees in several wards of the city of Bombay These conducted a political quarterly (11) it started in Bombay an organization called the Indian Economic Society with a view to promoting the study of Indian economics on right lines and also conducted a vernacular class (12) A new association called the Indian Liberal Club has been started to carry on political propaganda It is now re-organised as Institute of Economics and Politics Besides the society was engaged in conducting a scheme of welfare work to supply cheap grain cheap cloth and cheap credit at Jamshedpur Mr K. J. Chikalla one of its Members has started a Gujarati ladies organization called the Bhadrini Samaj for work among women in Gujarat and Kathiawar Mr A. V. Thakkar has started in the District of Panch Mahals in Gujarat a mission for the Bhils for the improvement of the Bhil population and it is called the *Bhil Sena Mandal* The Society also takes active interest in the organization of labour movement in India Two of its Members Messrs N. M. Joshi and B. R. Bakhale are conducting a labour monthly, called the All India Trade Union Bulletin which has been recognized as the Official organ of the All India Trade Union Congress Quite recently the United Provinces Branch organized a band of volunteers who rendered assistance, in a manner that called forth general approbation, to the pilgrims at the Kumbha Mela in Hardwar and Allahabad, the ladies of the Poona Seva Sadan assisting in this work The Society engages in journalistic work also, having in its control the *Havasada*, an English weekly in Nagpur and the *Dnyan Prakash*, a Marathi daily and weekly in Poona The Society has been conducting with Mr Vase as editor an English weekly called *The Serpent of India* The U. P. Branch had in addition undertaken the publication of pamphlets on public questions and has sent out three such publications together with a

large quantity of land. This Branch has taken lead in organizing the *Boy Scout Movement* all over the province through the local *Seva Samitis*. The Madras Branch engages itself principally with co-operative organization, publishing in three languages Co-operative Bulletin, Co-operative Industrial Societies and the Social Service League activities in the city of Madras. In 1924 it did the work of distributing relief to the refugees in the flooded areas of the Madras Presidency. The expenses incurred by the Central Home of the Society in Poona its four branches together with the various centres working under them exceed Rs 85,000 a year and this amount is made up by contributions from Indians, rich as well as poor. The present number of workers enlisted by the Society is about 80 most of whom are University men of considerable standing. Besides, there is a large number of devoted associates and other helpers—men as well as women—connected with the institutions started by the members of this Society.

President—The Right Honble Mr V S Srinivasa Sastri B.A. LL.B. Bayapetta Madras Senior Member Madras Branch, Mr Gopal Krishna Devdhar M.A. Vice-President of the Society and the Senior Member Bombay Branch Mr Natesh Appaji Pravid, M.A., Senior Member Central Provinces Branch Mr Hridayanath Kunwar, B.A., B.Sc. Senior Member Upper India Branch Mr A. V. Patwardhan, B.A. Senior Member, Business Branch Poona, Messrs. Joshi, Vaze and Thakkar together with the senior members of Branches constitute the Council of the Society with the Honble Mr Sastri as its President. Mr Asvat Vinayak Patwardhan B.A. is the Secretary of the Society. Six young men nearly all graduates who were admitted on probation were last year enrolled as members under training. In 1923 and 1924 two members were admitted as members under training and one young man as M.A. to probation.

SEVA SADAN—The Seva Sadan Society was started on the 11th of July 1908 by the late Mr B. M. Malabari. It is the pioneer Indian ladies society for training Indian sisters ministrant and serving (through them) the poor, the sick and the distressed. The Society has its headquarters in Gamdevi Bombay. The Society maintains the following departments of work: (1) Home for the Homeless (2) Ashrams (Training Homes) (3) Marathi Normal Classes (4) Home Education Classes (5) Industrial Department including a work room Sewing Cutting History (Cane-work) Cookery, Fancy Embroidery and Artificial Flowers are among the chief industries taught. Total number of women in the different classes is nearly 450.
Secretary Miss B. A. Engineer, M.A. LL.B. M.D.M. J.P.

CONSUMPTIVES' HOME SOCIETY—This Society was started by the late Mr B. M. Malabari and Mr. D. V. Varam (founder) on the 1st of June 1909. It was registered under Act XXI of 1860. Mr. Malabari secured a large grant of land in a Himalayan pine forest in Dharampur (Simla Hills) from H. H.

the Maharaja of Patiala, for a Sanatorium for Consumptives. His Highness also gave a donation of Rs one lakh in 1911 by special permission the Sanatorium was named "The King Edward VII Sanatorium". The Sanatorium has its special water works known as the Lady Hardinge Water Works presented by the late Sir Chintubhai Madhavji Bhai of Ahmedabad. The Sanatorium has a Guest House. The Noshirwan Adul Guest House for visitors to Dharampur. It has accommodation for 75 patients including the special Punjab Block built from a grant of the Punjab Government and reserved for European patients. Most of the blocks and cottages are built by Parsis. The Sanatorium has its own dairy and is called the Bel Pirojhai B. H. Patrick Dairy. The Recreation Hall is called "The Sir Bhupinder Singh Recreation Hall" after the name of the Maharaja of Patiala. Mr. Malabari collected an Endowment Fund of about Rs 67,000 lodged with the Treasurer Charitable Endowments under Act VI of 1890. Nearly Rs 2,45,000 have been spent on laying out the sites built up etc. and the current annual expenditure is about Rs 42,000. The Senior and Junior Medical Officers are in charge of the Sanatorium. The Office of this Society is situated at the Seva Sadan Buildings Gamdevi Bombay. Mr S. P. Wadia is the Hon. Secretary and Mr K. M. Jhaveri is the Hon. Treasurer.

THEOSOPHICAL EDUCATIONAL TRUST—This Society was established in 1913 and stands for the education of Indian boys and girls, in which the physical, emotional, intellectual and religious welfare are equally attended to. The general educational policy of the Trust is embodied in "Principles of Education" by Dr. Besant. The chief schools and colleges maintained are (1) Theosophical School and College at Adyar (Residential and Co-educational) (2) Theosophical College at Madanapalli, (3) Theosophical School for Boys at Benares (4) Theosophical College for Women at Benares. It is under contemplation to open a Unitary Residential University at Madanapalli and apply for a charter. **President** Dr. Annie Besant. **Secretary**, Mr. Yashwanandan Prasad. **Treasurer**, Mr. A. Schwara. **Headquarters** are at Adyar.

WESTERN INDIA NATIONAL LIBERAL ASSOCIATION—Founded in 1919.—The Association was formed in pursuance of clause (b) of Resolution XI of the First Session of the All India Conference of the Moderate Party with a view—to do sustained work for the political progress and the moral and material welfare of the people to give expression from time to time to the considered opinion of the Party on matters of public interest and to inform and educate public opinion in the Presidency in support of its views policy and methods

The Association accepts Article I of the Constitution of the Indian National Congress Organization as it stood in 1919 and will work for the fulfilment of the declaration made by His Majesty's Government on the 20th August 1917 in accordance with the principles embodied therein For the promotion of its aims and objects the Association shall pursue the following principles policy and methods—(a) Law abiding and constitutional methods of agitation or work (b) Co-operation with Government when ever possible and constitutional opposition to it whenever necessary and (c) Fostering a spirit of broadminded Liberalism based on principles of liberty equality and fraternity among the different classes and communities of the people

The affairs of the Association are conducted by a Council consisting of 46 members who are elected every three years

President The Honble Sir D. E. Wadia Kt. M.L.S. **Vice President** Sir Chimanlal H. Setalvad Kt. L.L.D. M.L.A. **Hon. Secretaries** Mr. Kazi Kabiruddin Bar-at-Law Mr. J. R. B. Jeejeebhoy Mr. J. R. Gharpure B.A. LL.B. and Mr. N. M. Joshi B.A. M.L.A. **Assistant Secretary**—Mr. V. B. Bhende

WOMEN'S INDIAN ASSOCIATION—This Association was started in Adyar Madras in 1917 with aims of service to women similar to those of the Seva Sadan in Bombay In ten years it has been able to start 70 branches and it has now over 3040 members. It establishes classes, meeting places and regular lecture programmes for women in each of these branches Each branch is autonomous and works according to the need of the locality Classes are held to teach the vernaculars, English, needle-work—plain and fancy—first aid, station work and music. Weekly lectures are given on subjects of general interest relating to women, such as health education, religion, civic responsibilities, woman suffrage, etc. Though started entirely as an educational institution, the movement for the Reform Bill proved that a most necessary part of work for the advancement of women was propaganda in support of woman suffrage. Accordingly the gaining of the vote for women was added to the objects of the Association and the Association specialises on woman suffrage and the removal of sex discrimination from all franchises and candidature for local boards municipal and legislative councils. Valuable work along these lines has been done by the Association as this is the only woman suffrage organisation in India. The Association pub-

lishes a monthly magazine, *Siri Dharma* in English with Tamil and Telugu articles. (Rs. 4 to non-members, Rs. 2 to members). It is an all India Association. Its largest branch is in Bombay its greatest number of branches in South India but yearly additional branches are being started in other provinces, and there are flourishing branches as far north as Lahore and Lashkar. The prospects of rapid growth for the Association are very bright as it has been found that women everywhere welcome the self-development which the establishment of these branches brings. The Association is affiliated with the International Woman Suffrage Alliance and the International Women's League for Peace and Freedom

Objects —

To present to women their responsibility as daughters of India

To band women into groups for the purpose of self development education, and the definite service of others

To secure the abolition of child marriage and child parenthood

To help them to realise that the future of India lies largely in their hands for as wives and mothers they have the task of training and guiding and forming the character of the future rulers of India

To secure for women the vote for Municipal and Legislative Councils as it is or may be granted to men

To secure for women the right to be elected as members on all Municipal and Legislative Councils.

Headquarters Adyar **Madras President**—Mr. Annis Desant **Vice-President**—Mrs. Jinarajadasa **Hon. General Secretary**—Mrs. M. E. Cousins, B. Miss **Hon. Treasurer**—Mrs. Mahadeva Shastri

YOUNG MEN'S CHRISTIAN ASSOCIATION—

This Association which was founded by the late Sir George Williams in 1844 is now a world wide movement well established in almost every country in both the hemispheres. The aim of the Association is through its religious social educational and physical work to answer the fourfold—spiritual social mental and physical—needs of young men.

The Young Men's Christian Association though relatively new to India, is spreading rapidly. The local Associations are autonomous and governed by local Boards of Directors. These Associations in Convention elect a National Council which is responsible for the supervision and expansion of all forms of the Association work in India, Burma and Ceylon.

There are now over 60 Associations affiliated to the national union and many other village Associations with many thousands of members of all races and creeds. The following Associations own one or more buildings which serve as the local headquarters—Allahabad, Bangalore, Alappay, Bombay, Calcutta, Calicut, Coimbatore, Colombo, Cante, Hyderabad, Jubbulpore, Kandy, Karachi, Kumbakulam, Kottayam, Lahore, Madras, Maymyo, Nagpur, Naini Tal, Palamcottah, Poona, Rangoon, Secunderabad, Shimla, Ootacamund, Welting

ton, Delhi, Jaipur, Madras, Murree, Rangoon, Trivandrum. The others use rented or rent-free buildings.

The work of the National Council and of the local Association is carried on by numerous voluntary workers and Committees, assisted by 114 specially trained full time Secretaries. A feature of the Y. M. C. A. in India is the international character of its Secretariat. It is made up of 19 Americans, 4 Canadians, 21 Englishmen, 2 Scotchmen, 1 Swede, 2 Anglo-Indians and 65 Indians and Ceylonese.

The classes of people reached by the Indian Y. M. C. A. and the lines of service it attempts to do for them may be stated as follows:—

Generally—1 Literature—Publication of original works and reprints. Four series: Heritage of India, Religious Quest of India, Religious Life of India, Makers of Modern India.

2 Lecture Bureau—Many thousands of slides on a wide variety of educational and recreational topics serving a clientele in over 700 centres in India.

3 Physical—Training Physical Directors for schools and colleges, fostering play ground movement, Olympics.

4 British Army Work in a number of centres and especially on the N. W. Frontier.

Boys—Scouting Boys Clubs, Camps, etc.

Students—Hostels and Institutes in most University Centres.

Indian students in Britain—Specially in London, Edinburgh and Glasgow.

Citizens—(i.e. English-educated Indians (Ceylonese and Burmese) Reading Rooms, Libraries, Lectures, Group Conferences, Study-Circles, handling many subjects of vital interest—social, intellectual and religious.

Rural Reconstruction—In 4 selected centres where demonstrations are given in cottage industries, poultry farming, book-keeping, etc.

Soldiers—Institutes and Holiday Homes.

Anglo-Indians—Hostels, Institutes, Employment Bureaux.

Europeans—Hostels, Institutes, Employment Bureaux.

Labourers in Mills—Welfare Work.

Indians in Prison—

Rural Communities—Rural Reconstruction work embracing Co-operative Banking, Distribution, Cattle Insurance and Arbitration, Cottage Industries and Adult Education.

A monthly magazine, the *Young Men of India*, is issued at Rs. 5 per annum, including postage.

The work of the National Council (excluding that of the 170 local Y. M. C. A.s) calls for a Budget of Rs. 2,40,415 in 1927. Of this sum, Rs. 70,000 has to be raised from the public in India.

The Headquarters of the National Council is 5 Russell Street, Calcutta. The officers are:—

Patron—His Excellency Baron Irwin of Kirby Underdale, P. O. C. S. I., C. I. E. Viceroy and Governor-General of India.

Chairman of the Executive—The Hon. Sir Ewart Crookes, Kt., M. A. Bar-at-Law.

General Secretaries—K. T. Paul, O. B. S. and Mr. S. K. Datta.

The Bombay Association now possesses four well-equipped buildings—Wodehouse Road, Lamington Road, Esch Street and Reynolds Road. The President is Mr. W. H. Nelson, G. B. E., M. C. S. and the General Secretary is Mr. H. W. Bryant, M. B. E. In connection with each building there is a well managed hotel, one for Anglo-Indian apprentices, one for Indian students, one primarily for European business men and one for Indians. There is also Welfare Work for labourers in Nagaur. Secretary W. E. D. Ward. There is city wide Physical Work programme. Secretary A. G. Noehren.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION OF INDIA, BURMA AND CEYLON

—This Association founded in the year 1875 was organized nationally in 1896. The aim of the Association is to promote the physical, intellectual, social and spiritual welfare of young women and girls in India, European, Anglo-Indian and Indian. This is done by the establishment of local branches in different centres. At present they number 90, including city and student branches. The Associations in big cities have a large membership including all classes of the community. The needs of girls are met by physical drill, recreation clubs and classes, lectures, commercial classes, Bible Study and devotional meetings and meetings for social intercourse. Boarding Homes, some of them holding as many as 70 girls are established where there is a demand for them and the Association, at present owns 24 including 8 holiday homes in the hills. These hostels accommodate working girls, teachers, nurses, students and apprentices. Rates vary according to the residents' salaries and accommodation though all equally receive the benefits of a comfortable home, good food and wholesome surroundings. The holiday homes provide cheap holidays in healthy surroundings and also accommodate girls who work in the hills during the hot season. In addition to holiday homes, Summer Conferences are held annually at Ootacamund and in a North Indian Centre. Special Girls Camps are arranged from time to time in many centres.

Travellers aid work is done in the large ports, especially Colombo, and a large number of transient guests and visitors are accommodated in the Homes in these centres. The Association also runs employment bureaux through the agency of which many girls find positions. The Commercial schools train girls for office and business life. These larger Associations are manned by a staff of trained secretaries, some of whom come from

Great Britain America, Australia, New Zealand and Canada. The others are found and trained in India. In many of the smaller branches where the work is of a simpler nature it is carried on by voluntary workers who render faithful service year by year. The majority of the Indian branches are also carried on in this way. The Student Department is affiliated to the World's Student Christian Federation and has 42 branches in the various School and Colleges.

The Association which is affiliated to the World's Committee of the Young Women's Christian Association is international and inter-denominational. Full membership is confined to members of the Christian Church but Associate membership is open to any girl

or woman of good character, no matter what her religion may be. The National Headquarters are situated in Calcutta and business is conducted by the National Committee which has a representative membership in all parts of India also in Burma and Ceylon.

The Patroness of the Association is H. R. Lady Irwin.

Copies of the annual reports and other printed matter can be obtained from the National Office which is at 5 Russell Street, Calcutta. The Official Organ of the Association is the "Woman's Outlook," an illustrated monthly magazine which supplies women living in India with a good magazine at the price of Rs 2-0-0 post free per annum.

ASSOCIATION OF BRITISH UNIVERSITY WOMEN IN INDIA.

The Association of British University Women in India was established in 1913. Its objects are —

(1) To facilitate intercommunication and co-operation between women belonging to the universities of the United Kingdom, resident in India.

(2) To provide a means of keeping in touch with the universities of the United Kingdom, by communication with the British Federation of University Women and otherwise as may seem expedient.

(3) To act as an organisation which shall afford opportunity for the expression of united opinion and for concerted action by university women.

Membership is open only to those women who hold degrees in any university in the United Kingdom or hold Oxford or Cambridge Honours Certificates but Associate Membership is open to women who have studied at a British University for two years and each Branch may admit as Honorary Members women who have advanced the higher education and interests of women.

The Association of British University Women has four branches. The addresses of the Honorary Secretaries are as follows —

Hon. General Secretary — Mrs E. F. Ringolev
c/o P. Q. E. 555, Buxteh.

Honorary Local Secretaries

Bombay	Mrs Blair Arthur House Cooperage Bombay
Calcutta	Hon. Secretary c/o Miss Cor nelia Sorabji 28 Chowringhee Calcutta
Delhi	Mrs Blomfield Aurlinet Rd Rajpura Delhi
Punjab	Mrs Irving 16 Davis Road Lahore

The Delhi and Punjab Branches came into existence in 1918. The Calcutta and Bombay Branches are influential and have repeatedly intervened with good effect to educate public opinion with regard to subjects affecting women. All Branches have for instance, made investigations on behalf of the Education Department, Govern-

ment of India, the Calcutta University Commission etc., and have supplied, through the International Federation of University Women information on Secondary Education in India to the League of Nations. They have been the means of introducing women on to University Senates and Municipalities. The Calcutta Branch carried through an important exhibition of Food Products.

The Bombay Branch has done good work in connection with the formation of the Social Purity Committee and has through a special sub-committee organised public meeting for women on subjects affecting their interests about which legislation was being or had been recently enacted.

A valuable part of the work of the Association was the establishment of Women's Employment Bureau in Calcutta and Bombay. They were remarkably successful. The Bombay Bureau was eventually merged into the employment Bureau established by the Women's Council. The Calcutta Bureau has ceased to exist.

As a means of promoting friendships between women from various parts of the United Kingdom, with widely differing tastes and interests and spheres of life in India, and as an instrument for affording opportunities for usefulness to educated women, the Association of University Women has a useful function to perform.

Federation of University Women in India

This is an organisation conceived to unite for service and fellowship all University Women of whatever race or University who may be resident in India. Units representing British Universities, Indian Universities and American Universities severally have existed since 1918 (Britain) and 1920 (India and America) respectively.

These Units are now fused together into one body and are as such affiliated to the International Federation of University Women which embraces 27 countries of the world and has its headquarters at Crosby Hall, Cheque Walk, London.

This International Federation is then a kind of League of Nations in which the University is the Unit and the opportunities it affords for better understanding for world friendship and world service will easily be imagined.

As forming one Family its Members help the common cause of women they help one another by inspiration and interchange of service they help the country for which as individual Units they stand, inasmuch as that country is swept forthwith by reason of its place within the larger national Federation alone into world statistics and the dignity of recognition by the League of Nations at Geneva.

The benefit to Members individually also is great. The Club Houses of the Federation all over the world are open to them. Equally so are all Scholarships and Fellowships offered by the Federation.

During 1927 there have been included Scholarships from Great Britain and America which gave free tuition board and residence at certain Colleges to students for a degree, residential Scholarships at Crosby Hall, valuable fellowships and prizes offered chiefly for Medical or Scientific research by Australia and America.

Membership is open to Women Graduates of any University through the Unit representing that University. Colonial Graduates are at present attached to the British Unit.

Subscriptions—British Unit Rs. 3 a year
Indian Unit Rs. 2 a year
American Unit Rs. 2 a year

The Federation has Branches in Bombay (Calcutta, Delhi, Lahore, East India Branch has its local committee). But as a whole the Federation is under a Central Committee with Headquarters at Calcutta for the years 1927 and 1928.

OFFICE SECRETARIES (CENTRAL COMMITTEE)
President—Mrs Stewart Macpherson

LOCAL REPRESENTATIVES

Bombay Miss Bevers.
Mrs Dorset
Calcutta Mrs Kellus.
Mrs E. Chaudhuri
Delhi Mrs Chaitman.
Lahore Mrs Johnson.
Mrs Thapar

Honorary General Secretary Miss Cornelia Sorabji, Law Library, High Court Calcutta.

Applications for membership should be made to the Honorary General Secretary who will forward the same to the Local Secretary to whose Unit it may appertain.

EX SERVICES ASSOCIATION INDIA AND BURMA

The following shows some of the work carried out during 1926 by the Association which undertakes in India and Burma the work on behalf of British Ex Officers and British Ex Service men to which the late Earl Haig pledged himself in England—

(a) 260 applicants provided with employment despite most unfavourable conditions.

(b) Over Rs. 2,35,400 expended in affording assistance to British Ex Service men and the dependents of these in India and Burma and a further £350 contributed to Earl Haig's Association at Home for the assistance of those Ex Members of the Indian Services who after returning to England were in distress and want.

Men were started in business, distress arising from sickness and from unemployment was relieved. School fees were paid and school outfits

provided for numerous children. Repatriation and emigration expenses were met. Board and lodging were provided while men looked for work. Windowless, orphan and deserted wives assisted. Expenses of travelling were borne, legal and medical expenses were met.

(c) Miscellaneous assistance of every description was given to applicants. Matters of pensions and entitlement were assisted. Information and aid for a beneficial settlement were given. Legal advice was afforded. Letters of recommendation to possible employers were given. Civil employment offered in India to serving soldiers was investigated and the wants of large numbers of ex-officers and ex-service men were gone into at intervals.

It is the Commander-in-Chief of the President of the Association.

The Church.

In the ordinary acceptance of the term there is no established Church in India. An Ecclesiastical Establishment is maintained for providing religious ministrations, primarily to British troops, secondarily to the European civil officials of Government and their families. Seven out of the eleven Anglican Bishops in India are officers of the Establishment, though their episcopal jurisdiction far transcends the limits of the Ecclesiastical Establishment. The stipends of the three Presidency Bishops are paid entirely by Government and they hold an official status which is clearly defined. The Bishops of Lahore, Lucknow, Nagpur and Rangoon draw from Government the stipends of Senior Chaplains only but their episcopal rank and territorial titles are officially recognised. The Bishops of Chota Nagpur, Tinnevely, Madras, Travancore-Cochin, Dornakal and Assam are not on the establishment. The new Bishopric of Assam was created in 1915. In its relations with Government it is subordinate to the see of Calcutta. But the maintenance of the Bishopric is met entirely from voluntary funds.

The ecclesiastical establishment includes four denominations—Anglican, Scottish, Roman and Wesleyan. Of these the first two enjoy a distinctive position, in that the Chaplains of those denominations (and in the case of the first named the Bishops) are individually appointed by the Secretary of State and rank as gazetted officers of Government. Throughout the Indian Empire there are 184 Anglican and 18 Church of Scotland chaplains whose appointments have been confirmed. The Roman Catholics and Wesleyans receive block grants from Government for the provision of clergy to minister to troops and others belonging to their respective denominations. The Wesleyan Methodist Church has a staff of military chaplains in India who receive a fixed salary from Government and 25 chaplains working on a capitation basis of payment by Government. Churches of all four denominations may be built, furnished and repaired, wholly or partly at Government expense.

The Anglican Communion has at last attained to self government. In Dec 1927 the Royal Warrant was given to an Indian Church Measure Bill and Jan 1 1928 was fixed as the date of its coming into operation. These laws have effected two great changes in the affairs of the Church. Up to the present the General Council has been a body unrecognised by law. It is now empowered to legislate for the Church. Further property which has been held for the Church by the Bishops and Archdeacons as Corporation Sole will now be transferred to Trust Associations which will be established under the Act. The actual date of severance of the legal bond between the Church in India and the Church of England has not yet been fixed, but by order of the King's Council it must be some day in 1930. After the severance is complete the Church in India will be as free to manage its own affairs as is the Church of any one of the other great Dominions. Approval was felt by many that freedom would involve drastic departures from the faith

and practice of the Church of England. Such fears have already been proved groundless in the first place by the adoption of a Constitution wholly Anglican in ideal and principle and secondly by the pledge given in the most solemn manner at the instance of purely Indian dioceses that the right of European congregations to worship according to the use of the Church of England will be most carefully safeguarded.

After the date of severance the law of the Church will be its own Canon Law passed by the General Council. In every fully constituted Diocese there is a Diocesan Council composed of the Bishop, all the clergy who hold his license and lay representatives from every parish. The Diocesan Councils manage all purely domestic matters and have the right of petitioning the General Council about any subject of wider importance which may interest them. They elect a given number of priests and laymen to be their representatives on the General Council. General Councils are held not less than every three years and usually at Calcutta. They consist of three Houses: Bishops, Priests and Laymen. Every Diocesan Bishop has a place in the House of Bishops. The other two Houses are formed by the elected representatives of the Diocesan Councils. The three Houses usually sit and vote together but any House has the right to meet alone if it desires to do so in order to formulate its policy or classify its opinions. A Canon of the Church is a Resolution passed with additional precautions ensuring due consideration by all three Houses. In all questions touching faith or Order the position of the episcopate as the divinely authorised teacher of the Church is most carefully safeguarded and the Bishops alone, without the concurrence of the other Houses, can issue Determinations about both subjects. But no Determination of the Bishops can be the subject of disciplinary action until it has become a Canon.

Another great change which will almost immediately take place will be the election of the Bishops to vacant sees by the dioceses over which they are to rule. State appointment after the date of severance will cease. Except for the Bishops the Establishment of Chaplains will continue unchanged. In the course of the debate upon the Indian Church Bill in the House of Lords the Secretary of State for India stated that the Government of India acknowledged that the provision of Chaplains and the maintenance of churches for the use of its European servants were duties of moral obligation. Very few Europeans therefore will notice any change at all in the status of services of their Church. But the Indian section of the Church has at least been set free to develop along lines more suitable to the Indian character than those fixed for English people during the controversies and persecutions of the fifteenth century.

So far as the European and Anglo-Indian communities are concerned the activities of the Church are not confined to public worship and pastoral functions. The education of the children of those communities is very largely in the hands of the Christian denominations. There are a few institutions such as the La

Martiniere Schools, on a non-denominational basis but they are exceptional. In all the large centres there exist schools of various grades as well as orphanages for the education of Europeans and Anglo-Indian under the control of various Christian bodies. The Roman Catholic Church is honourably distinguished by much activity and financial generosity in this respect. Her schools are to be found throughout the length and breadth of the Indian Empire and they maintain a high standard of efficiency. The Anglican Church comes next and the American Methodist have established some excellent schools in the larger hill-stations. The Presbyterian are also well represented in this field particularly by the admirable institution for destitute children at Kalimpong near Darjeeling. Schools of all denominations receive liberal grants-in-aid from Government and are regularly inspected by the Education Departments of the various provinces. Thanks to the free operation of the denominational principle and its frank recognition by Government, there is no "religious difficulty" in the schools of the European and Anglo-Indian communities.

Christian Missions.

The tradition that St. Thomas the Apostle was the first Christian missionary in India is by no means improbable. History however carries us no further back than the sixth century when a community of Christians is known to have existed in Malabar. Since then the so-called Syrian Church in south west India has had a continuous life. Except in its infancy this Church (or rather these Churches for the Syrian Christians are now divided into four communions) has displayed little of the missionary spirit until quite recent times. Western Christianity was first introduced into India by the Portuguese who established their hierarchy throughout their sphere of influence Goa being the metropolitan see of the Indies. St. Francis Xavier a Spaniard by race, took full advantage of the Portuguese power in Western India to carry on his Christian propaganda. His almost super-human zeal was rewarded with much success but many of the fruits of his labour were lost with the shrinkage of the Portuguese Empire. It is really to the work of the missionaries of the Propaganda in the 17th century that the Papacy owes its large and powerful following in India to-day. The Roman Catholics in India number 1,823,000 of whom 332,000 were added during the decade 1911-1921. The total of Syrian Christians (exclusive of those who while using the Syrian liturgy are of the Roman obedience) is 315,000 as against 367,000 in 1901. Protestant Christians (the term throughout this article includes Anglicans) number 2,950,000, an increase of 547,000 since 1911. Thus the total number of Christians of all denominations in India is now close on five millions. In fact it probably exceeds that figure at the present moment, as these statistics are taken from the Census Report of 1911, and the rate of increase during the previous decade was nearly 100,000 per annum.

The Protestant Churches made no serious attempt to evangelise India till 1813. They

have thus been at work in the Indian mission field for over 110 years and the statistical results of their efforts are given above. It is now however generally recognised that Christian missions are producing indirect effects in India which lend themselves only incompletely to any sort of tabulation. The main agency of this more diffusive influence of Christianity is the missionary school and college. The Protestant missions fill a considerable part in the elementary education of the country. According to the 1923 Report of the National Christian Council for India they are teaching 420,555 children in 12,699 elementary schools mostly situated in villages. The majority (343,935) of children in these schools are non-Christians. The same is true also of the secondary schools and in a still greater degree of the colleges. The former number 523 with 70,254 male and 24,30 female pupils. There are 40 colleges affiliated to Universities containing 20,062 male and 1,309 female students. Of these as many as 14,148 are non-Christians. From the standpoint of missionary policy much importance is attached to these agencies for the indirect propagation of the Christian faith. The statesman and the publicist are chiefly interested in the excellent moral effect produced by these institutions amongst the educated classes and the higher educational ideals maintained by their staffs. The principal University colleges under Protestant auspices are the Madras Christian College, the Duff College Calcutta, the Wilson College, Bombay, the Elphinstone College Lahore and three women's colleges—the Women's Christian College at Madras, the Isabella Thoburn College at Lucknow and the Women's Christian Medical College at Ludhiana. The Roman Catholics have a large number of educational institutions ranging from small village schools to great colleges preparing students for University degrees. But the proportion of Christian students in their institutions is very much larger than in those of the Protestant bodies. The proportion of literates amongst native Roman Catholics is probably lower than amongst the Protestant converts but compared with Hindus and Mohammedans it is conspicuously higher. The Roman Catholics have some 3,000 elementary schools in which 98,000 boys and 41,000 girls are receiving instruction. In middle and high schools they have 143,000 boys and 73,000 girls and in University colleges about 5,000 students of both sexes. These figures however include a large proportion of Europeans and Eurasians, who are an almost negligible quantity in Protestant mission schools and colleges.

More recent, but producing even more widespread results is the philanthropic work of Christian missions. Before the great famine of 1878 missionaries confined themselves almost exclusively to evangelistic and educational activity. The famine threw crowds of destitute people and orphan children upon their hands. Orphanages and industrial schools became an urgent necessity. But the philanthropic spirit is never satisfied with one kind of organisation or method. A great stimulus was also given to medical missions. Hospitals and dispensaries have sprung up in all parts of the mission field, and leper asylums

are almost a monopoly of Christian missionary effort. In 1911 the total number of medical missionaries working under Protestant societies in India was 118 men and 217 women; the majority of the former being also ordained ministers of religion. There are 134 industrial institutions in which 39 different arts and crafts are taught ranging from agriculture to type writing. In this department the **Salvation Army** hold a prominent place and the confidence of Government in their methods has been shown by their being officially entrusted with the difficult work of winning over certain criminal tribes to a life of industry. The indirect effect of all this philanthropic activity under missionary auspices has been most marked. It has awakened the social conscience of the non-Christian public and such movements as the Servants of India and the mission to the Depressed Classes are merely the outward and visible sign of a great stirring of the philanthropic spirit far beyond the sphere of Christian missionary operations.

Reunion.—For very many years Indian Christians have shown that they felt much more acutely than Europeans the scandal and disadvantage of the divisions of Christendom. These divisions are due to a very much greater extent than is always recognized to political causes and in the political conflicts of the sixteenth and seventeenth centuries when they became crystallised India had no part. Even those differences amongst Christians which have a purely religious origin and foundation seem to be of very little account to Indian converts. For them the great dividing line is that between Christ and Mohammed or Shiva and Vishnu. Standing before a background of paganism they are conscious of a real fundamental unity in Christ. Compared with the greatness of the gulf which separates Christian from non-Christian the differences of confession and order which separate Christian from Christian seem to be wholly artificial and negligible. In consequence the reunion movement, which is noticeable all over the world is nowhere so strong as in India. In South India it has already resulted in the formation of the South India United Church which is a group union of five of the principal Protestant communions and as these bodies are in communion individually with all, or almost all the other Protestant bodies at work in India the Union may be regarded as a Pan-Protestant Union. The S.I.U.C. is at present negotiating with the Anglican Church. It is seems probable the negotiations are successful the result will amount to a union of all the Christian bodies in South India except the Roman Catholics on the basis of the last Lambeth encyclical. This will mean that a real National Indian Church will come into being. Although it will be tolerant of almost every expression of Evangelical opinion and will retain the freedom of development characteristic of Protestantism, by its acceptance of the Catholic creeds and the historic Episcopate it will be linked up with the Catholic tradition of the Anglican Church.

Anglican Missionary Societies

The Church Missionary Society carries on work in India in seven different missions—the United

Provinces South India, Travancore and Cochin, Bengal, Western India, Punjab and Sind and the Central Provinces and Rajputana. The names are in order of seniority. Work was begun in what are now called the United Provinces in 1813 in Bombay in 1820 in the Punjab in 1831 and in the Central Provinces in 1834. The Society has always kept Evangelistic work well to the fore but it also has important medical missions especially on the N.W. Frontier and many schools of the Primary, Middle and High standards. The Church of England Zenana Missionary Society is an offshoot of the C.M.S. controlling the work of 162 missionary ladies. The number of ordained European missionaries of the C.M.S. in India and Ceylon is 100 European laymen 40 and European lay women 258. The Society claims a Christian community of 2,213,398 of whom 63,666 are adult communicants.

Society for the propagation of the Gospel

Statistics of the work of this Society are not easily ascertained as much of it is done through Diocesan institutions which while financed and in many cases manned by the S.P.G. are entirely controlled by the Diocesan authorities. The best known of the S.P.G. missions is that at Delhi, commonly called the Cambridge Mission to Delhi, carrying on educational work at St Stephen's College and a hotel. At the College there are about 200 students under instruction, and at the High School 800. The College hostels accommodate 100 students. Missions to the depressed classes exist in several parts of South India, especially in the District of Tanjore and Madurai. The S.P.G. also maintains an important Criminal Tribes Settlement at Hubli in the Bombay Carnatic. In 1911 there were 116,000 Indian Christians under the care of the S.P.G. 90 ordained European missionaries and 25,137 paid workers.

Other Anglican Societies.—The Oxford Mission to Calcutta was started in 1880. It works in the poorest parts of Calcutta and also at Barisal. There are 11 mission priests of this Society and 10 Sisters. In addition to its work amongst the poor the Oxford Mission addresses itself to the educated classes in Bengal and issues a periodical called *Prophecy* which is known all over India.

The Society of St John the Evangelist (commonly known as the Lowly Fathers) has houses at Bombay and Poona, and small stations in the Bombay Konkan. In Bombay its missionary work centres round the Church of Holy Cross (Umarsahad), where there is a school and a dispensary. The Christians are chiefly drawn from the very poorest classes of the Bombay population. At Poona the Society co-operates with the Vantage Sisters and in Bombay with the All Saints Sisters. Other Anglican sisterhoods represented in India are the Clerical Sisters at Calcutta and the Sisters of the Church (Kilburn) at Madras. The St Hilda's Deaconesses Association of Lahore carries on important educational work (chiefly amongst the domiled community) in the Punjab. The mission of the Scottish Episcopal Church at Nagpur, the Dublin University Mission at Hazaribagh, and the Mission of the Church of England in Canada working at Kangra and Painspur (Punjab) should also be mentioned under the head of Anglican Missions.

THE ROMAN CATHOLIC CHURCH

With regard to numbers, the *Catholic Directory of India*, 1924 gives the following tables —

	1901	1911	1921
1 <i>British India and Indian States—</i>			
(a) Latin Rite	1 312 224	1 614 620	1 8-1 408
(b) Syrian Rite	315 923	364 660	440,498
2 <i>French India</i>	25 859	25 918	25 490
3 <i>Portuguese India</i>	24- 650	296 148	288 741
Total, India	1 916 656	2 301 346	2 606,117
4 <i>Ceylon</i>	285 018	322 163	369 986
Total India and Ceylon	2 201 674	2 623 509	2 976 103

NOTE (1) —In 1880 the total for India and Ceylon was 1 170,854. In 1880 it had risen to 1 410,265 and in 1900 to 2 201 674.

NOTE (2) —The number of Catholics under the Royal Patronage of Portugal (the *Padroado*) in 1921 were reckoned at 604 802 of whom more than half are in British India.

NOTE (3) —In 1880 there were 1 504 priests. In 1921 there were 3 153.

The Catholic community as thus existing is composed of the following elements —

- (1) The Syrian Christians of the Malabar Coast, traditionally said to have been converted by the Apostle St. Thomas. They were brought under allegiance to the Pope by the Portuguese in 1599 and placed first under Jesuit bishops and then under Carmelite Vicars Apostolic. They are at present ruled by an Archbishop and three suffragan Bishops of their own Syrian rite.
- (2) Converts of the Portuguese missionaries from 1500 and onwards starting from Goa and working in the south of the peninsula and up the west coast Ceylon, Bengal etc.
- (3) European immigrants at all times including British troops.
- (4) Modern converts from Hinduism and Animism in recent mission centres.

The Portuguese mission enterprise, starting after 1500 continued for about 200 years, after which it began to decline. To meet this decline fresh missionaries were sent out by the Congregation *de propaganda fide* till by the middle of the 19th century the whole country was divided out among them except such portions as were occupied by the Goa clergy. Hence arose a conflict of jurisdiction in many parts between the Portuguese clergy of the *padroado* or royal patronage and the propaganda clergy. This conflict was set at rest by the Concordat of 1886. At the same time the whole country was placed under a regular hierarchy which after subsequent adjustments now stands as follows.—

Of the Portuguese Jurisdiction —

The archbishopric of Goa (having some extension into British territory) with suffragan bishoprics at Cochim, Mylapore and Damão (all three covering British territory).

Of the Propaganda Jurisdiction —

The archbishopric of Agra with suffragan bishoprics of Allahabad and Ajmere.
The archbishopric of Bombay with suffragan bishoprics of Poona, Mangalore, Calicut, Trichinopoly and Tuticorin.
The archbishopric of Calcutta, with suffragan bishoprics of Dacca, Krishnagar and Patna, and the Prefecture Apostolic of Assam.
The archbishopric of Madras with suffragan bishoprics of Hyderabad, Vizagapatam and Nagpur.
The archbishopric of Pondicherry (French) with suffragan bishoprics of Mysore, Coimbatore and Kumbakonam.
The archbishopric of Simla with suffragan bishopric of Lahore and the Prefecture Apostolic of Kashmir.
The archbishopric of Colombo (Ceylon) with suffragan bishoprics at Kandy, Galle, Jaffna and Trincomalee.
The archbishopric of Verapoly with suffragan bishopric of Quilon.
One archbishopric and three bishoprics of the Syrian rite for the Syrian Christians of Malabar.
Three Vicariates Apostolic of Burma.
During 1923 two new dioceses have been constituted Tuticorin and Calicut.

The European clergy engaged in India almost all belong to religious orders, congregations or mission seminaries and with a few exceptions are either French, Belgian, Dutch, Swiss, Spanish or Italian by nationality. They number about 1,000 besides which there is a body of secular clergy mostly native to the country, numbering about 2,000 and probably about 2,000 nuns. The first work of the clergy is parochial ministrations to existing Christians including railway people and British troops. Second comes education which is not confined to their own people, their schools being frequented by large numbers

of Hindus, Mahomedans, Parsis, etc. Among the most important institutions are St. Xavier's College, Calcutta, St. Peter's College, Agra, St. Xavier's College, Bombay, St. Joseph's College, Trichinopoly, St. Aloysius College, Mangalore, Loyola College, Madras, teaching university courses besides a large number of high schools and elementary schools. The education of girls is supplied for by numerous convent schools worked by religious congregations of nuns to say nothing of orphanages and other charitable institutions. The total number under education amounted in 1904 to 143,051 boys and 78,164 girls, later figures being unavailable. As to missionary work proper, the country is covered with numerous modern mission centres among which those in the Punjab, Chota Nagpur, Krishnagar, Gujarat, the Ahmednagar district and the Telugu coasts may be mentioned. (Full particulars on all points will be found in the Catholic Directory already quoted.) The mission work is limited solely

by shortage of men and money, which is forthcoming would give the means to an indefinite extension. The resources of the clergy after the ordinary church collections and pay of a few military and railway chaplains are derived mainly from Europe, that is, from the collections of the Society for the Propagation of the Faith and of the Holy Childhood; helped out by private or other donations secured from home by the differential local missionaries. In mission work the fathers count as enrolled only those who are baptized and persevering as Christians, and no baptism except for infants or at point of death is administered except after careful instruction and probation. This, while keeping down the record, has the advantage of guaranteeing solid results.

The Holy See is usually represented by a Delegate Apostolic of the East Indies who resides at Bangalore. At present this post is occupied by the Most Rev. Edward Mooney, D.D. appointed in 1925.

THE SCOTTISH CHURCHES

The Church of Scotland.—The Chaplaincy work of the Church of Scotland dates from 1814, when the Rev. Dr. Bryce landed in Calcutta, and organised a congregation of his Scottish fellow countrymen. The centenary of the churches in the three Presidency towns was celebrated Calcutta, 1814; Bombay, 1919; Madras, 1921. Since 1908 there have been eighteen chaplains on the staff, of whom nine belong to the Bengal Presidency, five to Bombay, and four to Madras. These minister both to the Scottish troops and to the civil population of the towns where they are stationed, but when there is a Scottish regiment the chaplain is attached to the regiment, instead of being posted to the station where the regiment happens to be placed and as a rule moves with the regiment. There are three Presidency senior Chaplains in charge of Bengal, Bombay, and Madras respectively. There are churches in the chief towns of the Presidencies and churches have also been built in all considerable military stations, e.g., Chakrata, Lucknow, Peshawar, Bankhet, Rawalpindi, Bialkot, Umballa and Jubbalpore. In addition to the regular establishment there are a number of acting Chaplains sent out by the Colonial Committee of the Church of Scotland, and these are serving in such stations as Rawalpindi, Lahore, Cawnpore, Meerut, Mhow and Quetta. The Additional Clergy Societies in India contribute towards the cost of this additional establishment. In other places such as Bialkot, Murree, Dalhousie and Darjeeling, regular services are provided by Scottish Missionaries. Simla has a minister of its own sent out from Scotland.

The Mission work of the Church of Scotland dates from 1829 when Alexander Duff, one of the greatest of modern missionaries, was sent to Calcutta. He was the first to open schools where English was made the medium for instruction, and where religious teaching was given daily. Similar educational missions were soon afterwards started in Bombay and Madras. Educational work is still an important branch of the mission work of the Church,

but the Bombay College was closed in 1891 and in 1907 the College in Calcutta was united with the College of the United Free Church of Scotland to form the Scottish Churches College. In the Punjab Evangelistic work is being carried on from eight centres under seventeen missionaries. The baptized Christian community now numbers over 14,000. Work commenced in Darjeeling in 1870 is now carried on throughout the whole Eastern Himalayan district, and there is a Christian community there of over 8,000 in the five mission districts of Calcutta, the Eastern Himalayas, Madras, Poona, and the Punjab there were at the end of 1919 over 24,787 baptized Indian Christians. In connection with these missions the Women's Association of Foreign Missions does invaluable service, in school, medical and zenana work having in India 41 European missionaries, 163 teachers, over 50 schools, three hospitals and six dispensaries.

The Church of Scotland has also done much to provide education for European children in India. Together with the United Free Church, St. Andrew's Church has six representatives on the governing body of the Anglo-Scottish Education Society, and the two churches exercise pastoral supervision over the Bombay Scottish Orphanage. In Bangalore there is the St. Andrew's High School, and both in Bangalore and in Madras the local congregation supports the school for poor children. The Ayrcliff Girls Boarding and High School is under the care of the Kirk-Session of St. Andrew's Church, Simla. The now well-known St. Andrew's Colonial Homes at Kalimpong, Bengal, though not directly part of the work of the Church of Scotland were initiated by and are being locally managed by missionaries of that Church. The homes exist for the benefit of the domestic European Community, and are doing magnificent work. There are now twenty cottages, and about 600 children in residence. Further information may be found in "Reports of the Schemes of the

Church of Scotland." Blackwood & Sons "The Church of Scotland Year Book" and "The Handbook of the Church of Scotland in India and Ceylon."

The United Free Church of Scotland—This branch of the Scottish Church has only three purely European congregations in India, two in Calcutta, Wellesley Square, and Howrah and one in Bombay Waudby Road. In Calcutta the Howrah Church is in the district of the mills, and every effort is made to minister to the Scottish Engineers and other workers in the mills. As noted above members of these congregations co-operate with the Established Church of Scotland in providing education for European children.

The Church carries on Mission work in seven different areas. They are Bengal (Calcutta, Kalna and Chinsura) the Santal Parganas with five stations Western India (Bombay Poona and Alibag), Hyderabad State (Jalna Bethel and Parbhani) Madras (Madras City Chingleput, Selperumbudur and Conjeevaram) the Central Provinces (Nagpur Bhandara Wardha, and Amraoti) Rajputana, where the extensive work is instituted by the United Presbyterian Church

in 1860 is now carried on from eleven centres.

The work falls into three main divisions, evangelistic, medical, and educational. The Christian community has been organised in all the chief centres into congregations which form part of the Indian Presbyterian Church, and this Church is seeking to take an increasing share in the work of evangelism. There are nineteen Mission Hospitals, among which are four excellently equipped and staffed Women's Hospitals, in Madras, Nagpur, Ajmer and Jaipur. From the days of Duff in Calcutta and Wilson in Bombay the Mission has given a prominent place to education. It has many schools in all parts of its field and it has also made a large contribution to the work of higher education through four Christian Colleges. The Scottish Churches College, Calcutta, is under the joint management of the Church of Scotland and the United Free Church. The Madras Christian College, which owes so much to the work of Dr William Miller is now under the direction of a Board representing several Missionary Societies. Wilson College, Bombay with which the names of Wilson and Dr Mac Kichan are specially associated and Hishop College, Nagpur are under the direct management of the United Free Church.

BAPTIST SOCIETIES

THE BAPTIST MISSIONARY SOCIETY OF GREAT BRITAIN—Formed in 1792, largely through the efforts of Dr Wm Carey operates mainly in Bengal Bihar and Orissa, the United Provinces the Punjab and Ceylon. The Baptist Zenana Mission and the Bible Translation Society have been united with this Society. The staff of the united Mission in India and Ceylon numbers 184 missionaries and about 1,150 Indian and Singalese workers. Connected with the Society are 315 Indian and Singalese Churches 346 Primary Day Schools 25 Middle and High Schools and 4 Theological Training Colleges. The Church membership at the close of 1925 stood at 19,911 and the Christian community at 58,954. The membership during the past ten years has increased by about 53 per cent, and the community by 30 per cent. In the same period. Amongst the non-caste people great progress has been made in recent years, and many of the Churches formed from amongst these people are self-supporting.

Special work amongst students is carried on in Calcutta, Dacca, Cuttack and Delhi where hostels have been erected for the prosecution of this form of work.

EDUCATIONAL WORK—Ranges from Primary School to Colleges. Serampore College, the only College in India able to bestow a theological degree granted under Royal Charter by His Danish Majesty in 1827 confirmed by the British Government in the Treaty of purchase of the Settlement of Serampore in 1845, and placed in 1856 by the College Council at the disposal of the Baptist Missionary Society to become a part of its

Missionary Educational operations Arts and Theological. It was affiliated in 1857 to the newly formed Calcutta University reorganised in 1910 on the lines of its original foundation with the appointment of a qualified Theological Staff on an Inter-denominational basis for the granting of Theological Degrees to qualified students of all Churches.

As the only College in India granting a Theological Degree a large number of students are now resident in the College. In Arts, the College prepares for the Calcutta Arts Examinations. *Principal* Rev G. Howells M.A., B.D. BLITT, Ph.D.

There is an Institute vernacular also at Cuttack for the training of Indian preachers and Bible schools in several centres.

There are 9 or 10 purely English Baptist Churches connected with the Society and English services are carried on in many of the stations. Medical work connected with the Society is carried on in 6 Hospitals, and 7 Dispensaries. Two large Printing Presses for both English and Vernacular work are conducted at Calcutta and Cuttack. The Secretaries of the Mission are the Rev John Reid and W Craig Esq., 48 Ripon Street Calcutta.

The Headquarters of the Mission are at 19, Furnival Street, Holborn, London. The total expenditure of the Society for 1925 amounted to £239,684.

THE CANADIAN BAPTIST MISSION—Was commenced in 1873 and is located in the Telugu

Country to the north of Madras, in the Kistna, Godavari, Vizagapatnam and Ganjam Districts. There are 22 stations and 859 out stations with a staff of 92 missionaries including a qualified physician and 1,031 Indian workers with Gospel preaching in 1,899 villages. Organized Churches number 86 communicants 18,683 and adherents 12,116 for the past year. Seventeen Churches are entirely self-supporting. In the Educational department are 452 village day schools, with 18,927 children 18 boarding schools 1 High school a Normal Training school a Bible Training School for Women, a Theological Seminary providing in all for 1,000 pupils, and an Industrial school. The Mission publishes a Telugu newspaper Village Evangelist is the central feature of the Mission and stress is laid upon the work amongst women and children. During the last decade membership has increased by 80 per cent, the Christian community by 85 per cent, and scholars by 500 per cent. The Indian Secretary is the Rev A. Arthur Scott, Tuni Godavari District.

THE AMERICAN BAPTIST TELUGU MISSION—Was commenced in the year 1838 and covers large parts of Nellore, Guntur, Kistna, and Kurnool Districts, parts of the Deccan and an important work in Madras and the surrounding vicinity. Its main work is evangelism but there are also Educational and Medical Institutions of importance. Industrial Settlement work for the Erukalas is carried on at Kavali and vicinity. Industrial departments are maintained also in connection with the Mission High Schools at Nellore, Ongole and Kurnool. Organized Telugu Churches number 236 with 88,713 baptized communicants. There are 102 missionaries, and 2,190 Indian workers. The mission maintains a Theological Seminary at Ramapatnam for the training of Indian preachers. A Bible Training School for the training of Telugu women is located in Nellore. A total of 32,689 receive instruction in 120 primary schools, 16 secondary schools and 4 high schools. In Medical work 9 Hospitals and 12 Dispensaries report 8,823 in patients, 47,80 out-patients and 115,073 treatments during the year.

Secretary Miss E. J. Draper Nellore

AMERICAN BAPTIST FOREIGN MISSIONS SOCIETY organized in 1814, has Missions in Burma, began 1814 Assam 1836 Bengal and Orissa 1836 South India 1840. It owes its rise to the celebrated Adoniram Judson. Until 1910 the Society was known as the American Baptist Missionary Union. There are 33 main stations in Burma, 13 in Assam, 29 in Bengal and Orissa, 10 in South India besides hundreds of out stations. All forms of missionary enterprise come within the scope of the Society.

The missionary staff numbers 437 in all with an Indian workers staff of 5,992. Communicants number 202,934. Organized churches number 1,779 of which 1,173 are self-supporting. Educational work is conducted on a large scale the total number of schools of all grades being 4,293 with over 85,027 pupils. The Christian College has 206 students in college classes. There are twenty High Schools with 4,683 pupils.

Medical work embraces 14 Hospitals and 27 Dispensaries in which 61,663 out patients and 4,253 in patients were treated last year.

Indian Christians contribute annually more than Rs. 571,251 for religious and benevolent work within the Mission.

The great work of the Mission continues to be evangelistic and the training of the native preachers and Bible women and extends to many races and languages, the most important of which, in Burma, has been the practical transformation of the Karens whose language has been reduced to writing by the Mission. The work in Assam embraces 9 different languages and large efforts are made amongst the employers on the tea plantations. There are 18 Theological Seminaries and training schools with 6,2 pupils. The Mission Press at Rangoon is the largest and finest in Burma.

THE MISSION TO LEPERS—Founded in 1874 is an inter-denominational and international society for the establishment and maintenance of Homes and Institutions for Lepers and of their untainted children working in 15 countries but largely in India, China, Korea and Japan. Its work in India is carried on through co-operation with 80 Missionary Societies. In India alone the Mission now has 87 Asylums of its own with upwards of 5,000 inmates and is adding or has some connection with work for lepers at 28 other places in India. Altogether in India over 7,000 lepers are being helped.

The Mission also provides for the segregation of the healthy children of lepers from their diseased parents. More than 400 children are thus being saved from becoming lepers.

An important feature of the work of the Mission is the measure of successful medical treatment whereby early cases, both adults and children are now benefiting.

Most of the Mission's income is received from voluntary contributions. Some funds are raised in India but the bulk of the money expended by the Mission in India is received from Britain although the provincial Governments give regular maintenance grants.

There is an Indian Auxiliary of the Mission to Lepers of which H E Lady Wilson who represents the Bombay Presidency is a Vice President.

Hon. Treasurer Henry F Lewis Esq 12 Dalhousie Sq Calcutta.

The General Secretary of the Mission is Mr W H I Anderson, 33 Henrietta St Covent Garden London, W C. The Secretary for India is Mr A Donald Miller Purulia Behar.

WOMEN'S CHRISTIAN MEDICAL COLLEGE,
WITH WHICH IS INCORPORATED THE PUNJAB
MEDICAL SCHOOL FOR WOMEN—in 1884 the
North India School of Medicine for Christian
Women was opened in Ludhiana in order to
give a Medical Education under Christian
influences to Indian Women. Doctor Edith
Brown M.A. M.D. was its Founder and
Principal The School was inter-denominational
and trained students for various Missionary
Societies

Clinical work was at first given at the Char-
lotte Hospital, which belonged to the Ludhiana
Zenana and Medical Mission The Memorial
Hospital was opened in 1900 and has now 200
beds. In 1913 non-Christian Students were
also admitted for training and the name was
modified to its present title given above

In 8 years 160 medical students have quali-
fied as doctors besides compounders nurses
and dais At present over 90 are in training
as medical students 18 as compounders 56 as
nurses and 28 as dais New laboratories have
been built for Clinical Pathology for Physio-
logy and for Chemistry and Physics and new
quarters for the Sisters and Nurses

**THE MISSIONARY SETTLEMENT FOR UNIVERSITY
WOMEN** was founded in Bombay in 1896 to
reach the higher class of Indian ladies Its ac-
tivities now include a hostel for women students
in addition to educational social and evangel-
istic work and a Holiday Home for students
and other ladies at Burd-Gholvad B B &
C 1 By Warden Miss Edge Vachaganadi
Road P O 7 Bombay

THE RAMABAI MERTI MISSION (affiliated with
the Christian and Missionary Alliance Mission in
1920) the well known work of the late Pandita
Ramabai shelters about 600 deserted wives
widows and orphans educating and fitting
them to earn their living The Mission is
worked on Indian lines and carried on by
Indian and European workers Evangelistic
work is carried on in the surrounding villages
of Kedgaon Poona District

Disciple Societies

The India Mission Disciples of Christ under the
United Christian Missionary Society St Louis
U.S.A. began work in India in 1882 It works
in the Central Provinces and South United Pro-
vinces There are 86 Missionaries including
missionaries wives and 349 Indian workers
There are 14 Organised Churches with the
membership of 2,385 There is a Christian com-
munity of 4,117 There are 7 Hospitals and 12
Dispensaries in which 141,284 in patients and
out patients were treated last year Two Orphan-
ages and Industrial Homes show 575 in
males A Boarding School for girls and
one for boys and 8 Hostels for boys show 501
inmates 2 Lepet Asylums have 180 in
males A Tuberculosis Sanitarium at Pandra
Road admitted 95 patients during the year An
Industrial School is conducted at Jamoh in
connection with which a 400 acre farm is used
for practical work In the Home for women and
children at Kulpahar needle work, garden-
ing etc., are taught in connection with which
a large business is done each year The Mission

Press at Jubbalpore printed about 3 000 000 pages of Christian Literature. There is a High School also 8 Middle Schools 28 Primary Schools with about 3 000 pupils.

The Australian Branch has 3 Mission Stations in the Poona District. The Great Britain and Ireland Branch in Mirzapur District of U P and Palawan District in Orissa. These two have no organised connection with the India Mission Disciples of Christ.

Secretary and Treasurer W H Scott Jubbalpore, C P

Undenominational Missions

THE CENTRAL ASIAN MISSION Objective: Salvation of Central Asia from Afghanistan to Tibet (including N E portion of Peshawar District) North Kashmir, etc. Protestant Evangelical Interdenominational. Headquarters in India: Marlon N W P P in London 52 Lincoln's Inn Fields. Branch Stations: Bandipur N Kashmir, Sagar, Baltistan. Founded and managed chiefly by officers who have served in Frontier posts.

THE FRIENDS FOREIGN MISSION ASSOCIATION works in five stations of the Hoshangabad Division of the Central Provinces and in two of the adjacent Bhopal State and has also some work going on in that of Gwalior. There are 7 Churches 9 missionaries 18 members. In full communion 1087 Christian adherents, 1 Boarding School for girls and 1 Industrial School for boys 1 Anglo Vernacular Middle School and 6 Primary Schools and one hospital with dispensary attached and 1 village dispensary a self supporting weaving community at Itarsi and a Farm Colony at Blakoria in Hoshangabad District. *Secretary* G W Maw Itarsi C P

THE AMERICAN FRIENDS MISSION with 8 missionaries is working in Bundelkhand. *Secretary* Miss E E Baird Newsgang C I

THE OLD CHURCH HEBREW MISSION was established in 1853 in Calcutta and is said to be the only Hebrew Christian Agency in India. *Secretary* The Chaplain 11 Mission Row Calcutta.

THE OPEN BROTHERHOOD—Occupies 46 stations in the U Provinces, Bengal, 8 Maharashtra Godavari Delta, Kanara, Ponnervelly Malabar Coast Coimbatore and Nageri Districts. They held an annual Conference at Bangalore.

Lutheran Societies

THE INDIA MISSION OF THE UNITED LUTHERAN CHURCH IN AMERICA—Formerly American Evangelical Lutheran Mission (Guntur and Rajahmundry). Work is conducted in the East Godavari West Godavari Krishna Guntur Nellore and Visakhapatnam Districts. Its Missionary staff consists of 108 including missionaries wives and 3221 Indian workers. The baptised membership is 121 472. There are 928 Village Schools 13 Boys Boarding Schools 6 Girls Boarding School, 3 High Schools a First Grade College with 600 students, 7 Bible and Secular Training Schools a Theological Seminary 1 Agricultural School 5 Hospitals and 2 Mission Presses. *Chairman* The Rev G A Ruppel Benthintala, Guntur District.

THE EVANGELICAL NATIONAL MISSIONARY SOCIETY OF STOCKHOLM SWEDEN founded in 1856, occupies the districts of Sangor, Betul and Chindwara in the Central Provinces. There are about 2,300 Church members constituted into an Indigenous Church with 14 local congregations. The European and Indian staff numbers 31 and 171 respectively. One Theological Seminary for training catechists and pastors, and one Training School for training Bible Women 31 Day Schools with 1390 children 51 Sunday Schools with 621 Christian and 1288 non-Christian children 9 Dispensaries with 24 647 patients during 1922 3 Workshops one of them with an aided Carpenter's Workshop One Industrial School for Widows Home for Orphanages and one Boarding School for Christian children. At the end of 1922 there were 133 boys and 27 girls in these institutions.

Secretary Rev P E Froberg Chitildwara C P

THE KANARESE EVANGELICAL MISSION with Headquarters at Mangalore South Kanara was organised on January 1st 1919 to take over the Mission work done formerly by the Basel Evangelical Mission in two of her fields namely the Districts of South Kanara and South Maharashtra. In 1923 a union was effected between the Home Boards at Lausanne and Basel but as before Lausanne will be specially responsible for the two districts in their charge at present. The missionaries and the funds come from Switzerland. It is hoped that a few of the former Basel Missionaries will return to these Districts. The last available figures are 12 chief stations and 56 outstations with a total missionary staff of 3 and 412 Indian workers. There are 48 organised congregations with a total membership of 12 324 which gave a total contribution of Rs 16 107 1 11 for church and mission work. Educational work embraces 7 schools of which there are 3 High Schools. The total number of scholars is 5 626.

Medical work is done at Betneri South Maharashtra, with a full staff and a hospital and two branch hospitals and dispensaries. A Women's and Children's Hospital was opened in June 1923 at Udupi South Kanara and has been enlarged of late.

The Mission maintains a Home Industrial Department for women's work and a large Publishing Department at Mangalore with a bookshop and a printing press occupying some 150 hands and doing work in many languages.

Ag Secretary The Rev P F Burkhardt Ph D Udupi South Kanara

THE CHURCH OF SWEDEN MISSION was founded in 1873. Operated till 1915 in the Madras Tanjore Trichinopoly and Ramnad Districts. Since 1915 the Mission having taken full charge of the former Leipzig Evangelical Lutheran Mission field working also in the Madras Chingleput Coimbatore Salem Arcot Districts with diaspora congregations in Bangkok Penang Kuala Lumpur and Colombo.

L E L M (Leipzig Evangelical Lutheran Mission) re-entered into the work, in 1927. Hence the Church of Sweden Mission now works in the Trichinopoly Coimbatore, Madras & Ramnad Districts with the diaspora congregations.

at Colombo. The L. E. L. M. works in the Madras, Chingleput, South Arcot and Tanjore Districts with the diocese congregations at Rangoon, Penang and Kuala Lumpur.

The Church (Lutheran Evangelical Lutheran Church) was constituted on 14th January 1939 and is working in connection with the two Missions.

CHURCH OF SWEDEN MISSION European staff 5, Schools 70, Teaching staff 130, Pupils Boys 3,998, Girls 1,247.

President—Rev. J. Sandegren M. A. B. D. Kilpauck Madras.

LEIPZIG EVANGELICAL LUTHERAN MISSION European staff 11, Schools 10, Teaching staff 36, Pupils Boys 1,117, Girls 609.

President—Rev. Provost Th. Myner, Mayavaram.

INSTITUTIONS COMMON TO BOTH MISSIONS School—Teaching staff 29, Pupils Boys, 72, Girls 39.

TAMIL EVANGELICAL LUTHERAN CHURCH Organized churches 41, Ordained Indian Ministers 4, Other Indian workers 84, Baptized membership 10,135, Baptized membership school 411, Teaching staff 499, Pupils 9,490 (Boys 7,788, Girls 1,802).

President—The Rt. Rev. Bishop D. B. (I) Trichinopoly.

THE INDIA MISSION OF THE EVANGELICAL LUTHERAN SYNOD OF MISSOURI (E. L. M. S.) is located in North Arcot, Salem and Tinnevely Districts in Travancore in Cochin and the Kolar Gold Fields with 25 missionaries, 1 nurse, one deaconess nurse, (American) 1 doctor (Indian), 1 Zulusa worker, 1 American teacher in charge of Missionary Home for children and 1 Lady educationist. Besides the three Training Institutes there are one complete and one incomplete High Schools, and among the Elementary Schools three complete Higher Elementary. In addition to evangelistic and educational work the Mission has now an up-to-date Dispensary and Lying in Hospital with 18 beds in Ambur and a Theological Seminary (24 students) besides 4 students doing active field work. Secretary—Rev. R. W. Gooss, Nagercoil & Travancore.

THE DANISH MISSIONARY SOCIETY—Established 1863 in South Arcot working there and in North Arcot on the Shevroy Hills and in Madras has a total staff of 517 Indian and 47 European workers. Communicants 1,578, Christian community 4,617, High School 3, Reading Schools 2, Industrial Schools 1, Orphanage 1, Hospitals and Elementary Schools 84, total 6,419.

President—Rev. P. Lange B. A. B. D. Nellikuppam N. T.

Treasurer—Rev. K. Hulberg B. A. B. D., 36 Broadway Madras.

THE SANTAL MISSION OF THE NORTHERN CHURCHES (formerly known as the India Home Mission or the Santals)—Founded in 1867 works in the Santal Parganas, Goalpara (Assam) Malda and Dumdum. Work is principally among the Santals. The mission staff numbers 27, Indian workers 480, communicants 4,000, Christian community 23,900, organized churches 36, boarding schools 4, pupils 508, elementary schools

69, pupils 1,085, industrial schools 2, Orphanage 1, children 29. Secretary—Rev. P. O. Boddage, Dumka, Santal Parganas.

MISSIONS AND ENEMY TRADING ACT—In May 1918 the following notice regarding Missions was published in the Gazette of India:—

The following missions or religious associations are declared companies under Act 2 (the Enemy Trading Act) of 1916—The Leipzig Evangelical Lutheran Mission, Madras, the Hermannsburg Evangelical Lutheran Mission, Madras, the Schleswig Holstein Evangelical Lutheran Mission, Madras, the Gosner Evangelical Lutheran Mission of the United Provinces and Behar and Orissa, the German Evangelical Lutheran Mission of Ranchi, Behar and Orissa. The Governor General in Council notices that the powers conferred under Section 7 of the said Act shall extend to the property movable and immovable of these missions or religious associations.

In June 1919 the Government of India stated—Effect is already being given to the suggestion that enemy missions in India should be taken over by British societies. The properties and undertakings of hostile missions have been vested in the Provisional Custodian of Enemy Property with a view to their transfer to boards of trustees composed partly of non-official members nominated by the National Missionary Council of India with the approval of the Government of India and partly of Government officials and those Boards of Trustees will in due course transfer the undertakings and properties to a missionary society to be selected by them with the approval of the Governor General in Council.

Methodist Societies.

The Methodist Episcopal Church is the organization in the United States of America which grew out of the Wesleyan revival in England and her American colonies during the latter part of the eighteenth century. This Church began its work in India in 1856 at first confining its activities to what is now the United Provinces. From that centre it spread until the outposts of its work were found in Baluchistan, Burma, Malaya, Netherlands India and the Philippine Islands. In 1870 a rearrangement of the mission field of the Church separated India, Burma and Baluchistan into what is now known as the Southern Asia division. Within this present field the Church now has a total baptized Christian community of over half a million of whom approximately 20,000 were baptized the year ending with 1926.

The avowed task of the Church has been the uplift of the depressed classes and its work has been largely among that class. As a matter of fact, however, it has large numbers who came from the Mohammedans and the caste Hindus, and among such its influence is extending.

The educational work of the Church is extensive. It having in this area a total of 1,301 schools of all grades including three colleges, twenty-two high schools, and numerous normal training and the logical institutions. The registered attendants in these schools number 62,299.

Special effort is made for the instruction and development of the young people of the Church there now being 493 chapters of the Epworth League with 20,253 enrolled members, and 5,845 organised Sunday Schools with an enrolment 159,520.

The publishing interests of the Church are represented in two presses at Madras and Lucknow, the former doing work in four vernaculars, and the latter in six. The periodicals issued cover the interests of both the evangelistic and the educational field. The Indian Witness, the Junior Methodist and Methodist Education being in English while the Kankab-Hind the Haqiqi-Niswan the Bai Mit Karak, and other periodicals for women and children are issued in several of the vernaculars.

The governing body of the Church is the General Conference held quadrennially in America in which the ten conferences now existing in India are represented by twenty-eight delegates. The policy of the Church in India looks forward to complete independence under the general governing body, there at present being but about three hundred and fifty American men and women as compared to 480 ordained and 8,162 unordained Indian and Burmese workers. At present the area is divided into seventy-two districts each in charge of a superintendent and among whom are many Indians. The work is supervised by four Bishops elected by the General Conference, and resident as follows: Bishop Frank W. Warne, Bangalore; Bishop John W. Robinson, Delhi; Bishop Frederick B. Fisher, Calcutta; and Bishop Brenton T. Badley, Bombay.

THE AMERICAN WESLEYAN METHODIST MISSION, Sanjan Thana District Headquarters Stations with missionaries: Danda, Maroll, and Nargol Thana District Vapi (Daman Road Station) Surat District. Pardi & Surat District. Six missionaries on field. Two on furlough. One under appointment. Four main stations. Two boarding schools. One industrial school. One Bible school. Six village schools. *Superintendent*: C. B. Harvey, Sanjan Thana District.

THE REFORMED EPISCOPAL CHURCH OF AMERICA at Latur and Lucknow. W. P. has 2 Missionaries, 4 Outstations, 1 Hospital, 2 Orphanages and a membership of nearly 100.

The Methodist Protestant Mission began work in India in 1919 has a staff of seven missionaries, and one under appointment. The work is confined to Dhulla Tanka, with

one Main station, Dhulla. There two boarding schools, district evangelistic work and medical work. *Secretary*: Miss Mildred McKim, Dhulla West Handesh.

THE WESLEYAN METHODIST MISSIONARY SOCIETY commenced work in India in 1817 (Ceylon in 1814). The Mission in India, apart from Ceylon, is organized into 7 District Synods with 2 Provincial Synods. There is a large English work connected with the Society. 20 ministers giving their whole time to Military work and English churches.

The districts occupied include 68 main stations in Bengal, Madras, Mysore, Bombay, Punjab, Central Provinces, Hyderabad (Nizam's Dominions), United Provinces and Burma. The Burma Synod has recently been attached to the Ceylon Provincial Synod for purposes of administration. Its statistics are no longer included in this statement. The European staff numbers 102 with 75 Indian Ministers and 70 Indian workers. Communicants 18,518 and total Christian community 101,245. There are 7 large numbers of organized Churches many of which are self supporting.

Educational work comprises 3 Christian Colleges, students, 2,033. 5 Theological Institutions, students, 329. 7 High Schools, pupils 3,427. 14 Industrial schools, pupils 400. 923 Elementary schools with 26,180 scholars. In Medical work there are 3 hospitals, 12 dispensaries, 1,127 in patients and 65,431 out-patients.

The Women's Auxiliary carry on an extensive work in the places occupied by the W. M. M. S. There are 93 women workers from abroad of whom 16 are qualified doctors. The Indian women workers number 382. There are 109 girls day schools with 13,377 pupils and 23 boarding schools with 1,979 boarders. There are several philanthropic institutions for the rescue and training of women. The Women's Auxiliary manage 12 hospitals and 9 dispensaries which had 8,041 in patients and 97,593 out patients. The cost of the work to the Women's Auxiliary in 1920 was nearly £25,000.

THE FREE METHODIST MISSION of North America—Established at Yeotmal, 1893, operates in Berar with a staff of 19 Missionaries and 4 Indian workers. Organised churches 4. Theological school and 5 Elementary schools, and 2 Anglo-Vernacular schools and Dispensaries. *Secretary*: Rev Elizabeth Moreland, Yeotmal, Berar.

THE SALVATION ARMY

For many years the operations of the Salvation Army in India were under the immediate direction of eight Territorial Commanders, in part responsible to Commissioner Booth Tucker as Special Commissioner for India and in part to International Headquarters. The General recently decided to divide the country into four distinct Commands each under its own Territorial Commissioner and directly responsible to International Headquarters.

Northern India—The area under this command is the S. A. work in the whole of the Punjab and the United Provinces with Headquarters at Lahore.

In addition to an extensive evangelistic work in the Punjab, and in several centres in the United Provinces there are a number of Settlements for the Criminal Tribes in the United Provinces (where this important work was first introduced) and several also in the Punjab.

In the Punjab is situated an agricultural settlement consisting of a large village of 1,800 inhabitants who cultivate some 2,000 acres of land in which they will gradually acquire proprietary rights the Government having given it to the Salvation Army on easy terms. This is proving to be very successful.

The oversight of a large tract of country in the Punjab comprising some two thousand acres of land has been handed to the Salvation Army for the purpose of establishing a Colony.

Other industries include Weaving Schools, Agricultural and Fruit Farms, Day and Boarding Schools, a Home for stranded Duriopeans, and for British Military Soldiers, 2 Hospitals and 4 Dispensaries.

Village Centres occupied 1,783 Officers and Employees, 72 Social Institutions, 23.

Territorial Headquarters S. A. Ferozepore Road Lahore Punjab

Territorial Commander Colonel Himmat Singh (Baugh)

Chief Secretary Lt. Colonel Dikri Singh (Melling)

Western India—The three Territories of Bombay, Guzerat and Maratha now form the Territory of Western India.

Besides the distinctly evangelistic operations there are established a large General Hospital—Thomas Emery Memorial—several Dispensaries at which during the year about 25,000 patients are treated over 210 Day and Boarding Schools, a Home for Juvenile Criminals, an Industrial and Rescue Home for Women conditionally Released Prisoners, Home Weaving Schools, a Factory for Weaving, Warming and Reeling Machines and a Land Colony having a population of some hundreds of Salvationists.

Corps 310 Outposts, 475 Officers, 526 of whom 461 are Indian employees and teachers, 32 Social Institutions, 15.

Territorial Headquarters S. A. Moreland Road, Byenlla Bombay

Territorial Commander Commissioner Horskins

Madras and Telugu Territory—This Territory comprises the city of Madras and work situated in the Nellore, Guntur, Kistna and West Godavari Districts of the Northern Circars of the Madras Presidency, also Bangalore.

There are the following agencies at work—257 Corps and outposts, six places in which work is systematically done.

112 Village Primary Schools, 4 Settlements for Criminal Tribes with a total population of 3,388, 7 Industrial Schools for children of Criminal Tribes, 1 Rescue Home, 1 silk Farm, where some 60 boys are being instructed in the various branches of sericulture, 2 institutions for the training of officers and 1 boarding school for boys and 1 for girls.

1 Trading Department where cloth, leather goods, furniture, carpets, silk, lace, etc. the products of Industrial Institutions, are disposed of.

Territorial Headquarters The Salvation Army Broadway Madras

Territorial Commander Colonel N. Muthiah

Ch. of Secretary Major L. Maslin

The South Indian Territory of the Salvation Army comprises the vast stretch of country to the south of the line drawn from Pondicherry skirting the State of Mysore to the most southerly point of Bombay Presidency though the real sphere of operations is in Travancore, that in Cochin and in Malabar District and joining Travancore. The work had a very humble beginning in Travancore, being commenced principally for the well-being of the coolies and the labourers, but it has gradually increased and extended. The entire inhabitants of certain villages have become Salvationists and many representatives of the Army are carrying on the work in 119 different villages. In connection with the work in the villages a number of Village Halls have been erected, also several Officers' Quarters.

In the villages round Nagercoil a number of women have been taught basket-making and needlework, also a similar industry is being carried on at Neyyattinkara. The Medical work plays an important part in the work of the Salvation Army. Major (Dr.) Noble is in charge of this branch which consists of the mother Hospital known as the Catherine Booth Hospital and seven branch Hospitals. As the Major is on furlough, Doctor Rendle is now in charge of the Hospital, assisted by Doctor Round. Since last year the work has been increased by the installation of the X-Ray and Diathermy apparatus.

There are 1149 Corps and Outposts, i.e., villages in which work is systematically carried on—1,008 Officers and teachers, 302 Day Schools, 3 Boarding Schools, 1 Hostel, 4 Training Garrison and 2 Homes of Rest for European and Indian Officers.

Territorial Headquarters The Salvation Army Kuravankonam Trivandrum.

Territorial Commander Colonel (Mrs.) A. Trounce

Laws and the Administration of Justice.

The indigenous law of India is personal and divisible with reference to the two great classes of the population, Hindu and Mahomedan. Both systems claim divine origin and are inextricably interwoven with religion and each exists in combination with a law based on custom. At first the tendency of the English was to make their law public and territorial and on the establishment of the Supreme Court at Calcutta in 1773 and the advent of English lawyers as judges they proceeded to apply it to Europeans and Indians alike. This error was rectified by the Declaratory Act of 1780 by which Parliament declared that as against a Hindu the Hindu law and usage and as against a Mahomedan the laws and customs of Islam should be applied. The rules of the Shastras and the Koran have been in some cases altered and relaxed. Instances can be found in the Bengal Sati Regulation Act of 1829 the Indian Slavery Act 1843 the Caste Disabilities Removal Act of 1850 the Hindu Widows Remarriage Act 1856 and other Acts and Codes. To quote the Imperial Gazetteer: "A certain number of the older English statutes and the English common law are to a limited extent still in force in the Presidency Towns as applicable to Europeans while much of the old Hindu and Mahomedan law is everywhere personal to their native fellow subjects but apart from these and from the customary law which is as far as possible recognised by the Courts the law of British India is the creation of statutory enactments made for it either at Westminster or by the authorities in India to whom the necessary law giving functions have from time to time been delegated."

Codification

Before the transfer of India to the Crown the law was in a state of great confusion. Sir Henry Cunningham described it as hopelessly unwieldy entangled and confusing. The first steps toward general codification were taken in 1833 when a Commission was appointed of which Lord Macaulay was the moving spirit to prepare a penal code. Twenty-two years elapsed before it became law during which period it underwent revision from his successors in the Law Membership and especially by Sir Barnes Peacock the last Chief Justice of the Supreme Court of Calcutta. The Penal Code which became law in 1860 was followed in 1861 by a Code of Criminal Procedure. Substantially the whole criminal law of British India is contained in these two Codes. One of the most eminent lawyers who ever came to India Sir James Stephen, said: "The Indian penal code may be described as the criminal law of England freed from all technicalities and superfluities systematically arranged and modified in some few particulars (they are surprisingly few) to suit the circumstances of British India. It is practically impossible to misunderstand the code. The rules of Civil Procedure have been embodied in the Code of Civil Procedure. The Indian Penal Code has from time to time been amended. The Code of Civil Procedure was remodelled in 1908 and the Code of Criminal Procedure in 1898. These Codes are now in force."

Statute Law Revision

In October 1921 a committee was appointed under the presidency of the Hon. Mr. A. P. Muddiman I.C.S. to deal with the question of statute law revision. The functions of the Committee are to prepare for the consideration of Government such measures of consolidation and clarification as may be necessary to secure the highest attainable standard of formal perfection in the statute law of India. In several branches of the law consolidation has long been overdue and it is suggested that the preparation of a Bill consolidating the existing law relating to merchant shipping with such amendments therein as are necessitated or rendered desirable by the enactment of the English statutes since 1894 on the same subject should form the first duty undertaken by the Committee. Under the conditions resulting from the establishment of the reformed Constitution increasing importance will attach hereafter to the periodical examination and revision of the Statute Book and the Government of India hope that the Committee will take its place as a permanent feature of the legislative machinery of the country.

European British Subjects

Whilst the substantive criminal law is the same for all classes certain distinctions of procedure have always been maintained in regard to criminal charges against European British subjects. Until 1872 European British subjects could only be tried or punished by one of the High Courts. It was then enacted that European British subjects should be liable to be tried for any offences by magistrates of the highest class who were also justices of the peace and by judges of the Sessions Courts but it was necessary in both cases that the magistrate or judge should himself be a European British subject. In 1893 the Government of India announced that they had decided to settle the question of jurisdiction over European subjects in such a way as to remove from the code at once and completely every judicial disqualification which is based merely on race distinctions. This decision embodied in the Libert Bill aroused a storm of indignation which is still remembered. The controversy ended in a compromise which is thus summarised by Sir John Strachey (India): "The controversy ended with the virtual, though not avowed abandonment of the measure proposed by the Government. Act III of 1894 by which the law previously in force was amended cannot be said to have diminished the privileges of European British subjects charged with offences and it left their position as exceptional as before. The general disqualification of native judges and magistrates remains but if a native of India be appointed to the post of district magistrate or sessions judge his powers in regard to jurisdiction over European British subjects are the same as those of an Englishman holding the same office. This provision however is subject to the condition that every European British subject brought for trial before the district magistrate or sessions judge has the right, however trivial be the charge to claim to be tried by a jury of which

not less than half the number shall be Europeans or Americans. Whilst this change was made in the powers of district magistrates, the law in regard to other magistrates remained unaltered. Since 1856 no distinctions of race have been recognised in the civil courts throughout India.

After a discussion on this subject in the Legislative Assembly in September 1921 the following motion was adopted — That in order to remove all racial distinctions between Indians and Europeans in the matter of their trial and punishment for offences a committee be appointed to consider what amendments should be made in the provisions of the Code of Criminal Procedure, 1898 which differentiate between Indians and Europeans British subjects and American and Europeans who are not British subjects in criminal trials and proceedings and to report on the best methods of giving effect to their proposals. As a result of the recommendations of the Racial Distinctions Committee the law on the subject was further modified and by the Criminal Law Amendment Act XII of 1924 in place of the old Chapter XXXIII (35-443-483) the new Chapter XXXIII (5-448-449) with certain supplementary provisions were substituted. This has in some measure reduced the differences between the trials of Europeans and of Indians under the Code.

High Courts

The highest legal tribunals in India are the High Courts of Judicature. These were constituted by the Indian High Courts Act of 1861 for Bengal, Bombay and Madras and later for the United Provinces and the Punjab superseding the old supreme and Sudder Courts. More recently High Courts have been constituted for Patna and Banarso as well. The Judges are appointed by the Crown; they hold office during the pleasure of the Sovereign; at least one-third of their number are barristers, one-third are recruited from the judicial branch of the Indian Civil Service, the remaining places being available for the appointment of Indian lawyers. Trial by jury is the rule in original criminal cases before the High Courts but juries are never employed in civil suits in India.

For other parts of India High Courts have been formed under other names. The chief difference being that they derive their authority from the Government of India, not from Parliament. In Burma there is a Chief Court with three or more judges; in the other provinces the chief appellate authority is an officer called the Judicial Commissioner. In Sind the Judicial Commissioner is termed Judge of the Sudder Court and has two colleagues.

The High Courts are the Courts of appeal from the superior courts in the districts criminal and civil, and their decisions are final, except in cases in which an appeal lies to His Majesty in Council and is heard by the Judicial Committee of the Privy Council in England. The High Courts exercise supervision over all the subordinate courts. Returns are regularly sent to them at short intervals and the High Courts are able, by examining the returns by sending for proceedings, and by calling for

explanations, as well as from the cases that come before them in appeal, to keep themselves to some extent acquainted with the manner in which the courts generally are discharging their duties.

Lower Courts

The Code of Criminal Procedure provides for the constitution of inferior criminal courts styled courts of session and courts of magistrates. Every province, outside the Presidency towns is divided into sessions divisions consisting of one or more districts and every sessions division has a court of session and a sessions judge, with assistance if need be. These stationary sessions courts take the place of the English Assizes and are competent to try all accused persons duly committed and to inflict any punishment authorised by law, but sentences of death are subject to confirmation by the highest court of criminal appeal in the province. Magistrates' courts are of three classes with descending powers. Provision is made and largely utilised in the towns, for the appointment of honorary magistrates. In the Presidency towns Presidency magistrates deal with magisterial cases and benches of Justices of the Peace or honorary magistrates dispose of the less important cases.

Trials before courts of session are either with assessors or juries. Assessors assist, but do not bind the judge by their opinions on law; the opinion of the majority prevails if accepted by the presiding judge. The Indian law allows considerable latitude of appeal. The prerogative of mercy is exercised by the Governor General in Council and the Local Government concerned without prejudice to the superior power of the Crown.

The constitution and jurisdiction of the inferior civil courts varies. Broadly speaking one district and sessions judge is appointed for each district as District Judge he presides in its principal civil court of original jurisdiction, his functions as Sessions Judge have been described. For these posts members of the Indian Civil Service are mainly selected though some appointments are made from the Provincial Service. Next come the Subordinate Judges and Munsiffs, the extent of whose original jurisdiction varies in different parts of India. The civil courts, below the grade of District Judge are almost invariably presided over by Indians. There are in addition a number of Courts of Small Causes with jurisdiction to try money suits up to Rs. 500. In the Presidency Towns where the Chartered High Courts have original jurisdiction Small Cause Courts dispose of money suits up to Rs. 2,000. As Insolvency Courts the chartered High Courts of Calcutta, Bombay and Madras have jurisdiction in the Presidency towns. In the mofussil similar powers were conferred on the District Courts by the Insolvency Act of 1908.

Coroners are appointed only for the Presidency Towns of Calcutta and Bombay. Elsewhere their duties are discharged by the ordinary staff of magistrates and police officers unaided by jurors.

Legal Practitioners.

Legal practitioners in India are divided into Barristers-at-Law, Advocates of the High Courts, Vakils and Attorneys (Solicitors) of High Courts,

and Pleaders, Mukhtars and revenue agents, Barristers and Advocates are admitted by each High Court to practise in it and its subordinate courts, and they alone are admitted to practise on the original side of some of the chartered High Courts. Vakils are persons duly qualified who are admitted to practise on the appellate side of the chartered High Courts and in the Courts subordinate to the High Courts. Attorneys are required to qualify before admission to practise in much the same way as in England. The rule that a solicitor must instruct counsel prevails only on the original side of certain of the High Courts. Pleaders practise in the subordinate courts in accordance with rules framed by the High Courts.

Organisation of the Bar

At Calcutta, Madras, and Bombay there is a Bar Committee presided over, *ex officio* by the Advocate General. This body is elected by the barristers practising in each High Court, and its functions are to watch the interests of the Bar and to regulate its etiquette. At Allahabad, Lahore, Nagpore and Rangoon a similar Bar Committee exists but the electorate is extended to include the vakils or native pleaders and the president is either the senior practising member of the Bar or the Government Advocate. In the larger Districts and Sessions Courts an organisation representing the Bar is usually to be found and in the subordinate Courts including the Revenue Courts similar machinery is generally in use. Pending an opportunity of detailed inquiries in India, these general descriptions must suffice. The recommendations of the Indian Bar Committee of 1924 relating to the constitution of Bar Councils for the several High Courts in India have been recently adopted by the Indian Bar Courts Act, XXXVIII of 1928.

Composition of the Bar

A considerable change is occurring in the composition of the Indian Bar. The following extract from an informing article in the *Times* (May 25 1914) indicates the character and incidence of this development. During the last forty years a striking change has taken place in the professional class. The bulk of practice has largely passed from British to Indian hands while, at the same time the profession has grown to an enormous extent. One typical illustration may be quoted attached to the Bombay High Court in 1871 there were 38 solicitors, of whom 10 were Indian and 28 English and 24 advocates of whom 7 were Indian and 17 English. In 1911 attached to the same High Court there were 150 solicitors, of whom more than 130 were Indian and the remainder English and 250 advocates of whom 16 only were English and the remainder Indian.

Law Officers

The Government of India has its own law colleague in the Legal Member of Council. All Government measures are drafted in this department. Outside the Council the principal law officer of the Government of India is the Advocate General of Bengal who is appointed by the Crown. He is the leader of the local Bar and is always nominated a member of the Provincial Legislative Council. In Calcutta he is assisted by the Standing Counsel

and the Government Solicitor. There are Advocates General and Government Solicitors for Bombay and Madras, and in Bombay there is attached to the Secretariat a Legal Remembrancer and an Assistant Legal Remembrancer drawn from the Judicial Branch of the Indian Civil Service. The Government of Bengal consults the Bengal Advocate-General, the Standing Counsel and the Government Solicitor, and has besides a Legal Remembrancer (a Civil Servant) and a Deputy Legal Remembrancer (a practising barrister). The United Provinces are equipped with a civilian Legal Remembrancer and professional lawyers as Government Advocate and Assistant Government Advocate. The Punjab has a Legal Remembrancer, Government Advocate and a Junior Government Advocate and Burma a Government Advocate besides a Secretary to the Local Legislative Council.

Sheriffs are attached to the High Courts of Calcutta, Madras and Bombay. They are appointed by Government, selected from non-officials of standing, the detailed work being done by deputy sheriffs who are officers of the Court.

Law Reports

The Indian Law Reports are now published in seven series—Calcutta, Madras, Bombay, Allahabad, Patna, Lahore and Rangoon under the authority of the Governor-General in Council. They contain cases determined by the High Court and by the Judicial Committee on appeal from the particular High Court. These appeals raise questions of very great importance and the Council of Law Reporting for England and Wales show their appreciation by printing the Indian Appeals in a separate volume and have also compiled a digest of Indian Appeals covering the period 1841-1893. The other Provinces and States have series of reports issued under the authority either of the Judiciary or the State.

Legislative Power

The supreme power of Parliament to legislate for the whole of India cannot be questioned in practice however this power is little used, there being a majority of officials on the Imperial Legislative Council—a majority deliberately reserved in the India Councils Act of 1858—the Secretary of State is able to impose his will on the Government of India and to secure the passage of any measure he may frame regardless of the opinion of the Indian authorities. Legislative Councils have been established both for the whole of India and for the principal provinces. Their constitution and functions are fully described in detailing the powers of the Imperial and Provincial Councils (q.v.). To meet emergencies the Governor-General is vested with the power of issuing ordinances having the same force as Acts of the Legislature but they can remain in force for only six months. The power is very little used. The Governor-General-in-Council is also empowered to make regulations having all the cogency of Acts for the more backward parts of the country, the object being to bar the operation of the general law and permit the application of certain enactments only.

THE INDIAN POLICE.

The police administration in India is in the hands of the Provincial Governments in their Reserved Departments. The members in the force are about 100,000 officers and men. In addition to these there are about 30,000 officers and men of provincial military police of whom more than half belong to Burma the remainder being in Bengal and Assam. The North West Frontier Constabulary is an armed semi-military force maintained in the Government of India in the N. W. Frontier Province. Its Chief Officer is the Commandant under whom are Assistant Commandants. The total cost of maintaining the force has greatly risen in recent years on account of increases of pay and allowances made on account of the increased cost of living. The total cost of the Civil Police in 1924 the latest year for which figures are available was Rs 10,65,643. The cost of military Police force by Provincial revenues in the same year was Rs 1,26,05,471. In large cities the force is concentrated and under direct European control in the metropolis the men are scattered throughout each District and located at various Outposts and Police stations. The smallest unit for administrative purposes is the Outpost which generally consists of 3 or 4 Constables under the control of a Head Constable. Outpost Police are mainly trained to patrol roads and villages and to report all matters of local interest to their superior the Sub-Inspector. They have no

powers to investigate offences and are a survival of the period when the country was in a disturbed state and small bodies of Police were required to keep open communications and afford protection against the raids of dacoits. It is an open question whether they are now of much use. Each Outpost is under a Police Station which is controlled by an officer known as a Sub-Inspector.

The Superior Staff of the Civil Police in each Province consists of an Inspector General and one or more Deputy Inspectors General under whom come the District-Superintendents of Police and Assistant Superintendents of Police. Besides this Superior Service appointed by the Secretary of State there is a Provincial Police Service the highest in rank in which are the Deputy Superintendents of Police whose rank corresponds with that of Assistant Superintendents of Police in the Superior Service.

Each Provincial Government is under one Superior Officer of the status of District-Superintendent to control the Railway Police in its province. Besides the special Railway Police there are in the ports Harbour Police and such special branches as are required for traffic control and so on. Two Battalions of Semi-military Special Police have been maintained in Malabar since the latest Moplah rebellion there.

Distribution of Police.—The following table shows the area of each Province and the number of Police of all ranks employed in it in 1925-26, the latest year for which figures have been published—

	Square miles	Number of Civil Police
Bengal	76,643	29,941
Assam	33,015	5,300
United Provinces	103,296	31,807
Punjab	99,846	41,154
North West Frontier Province	13,419	5,723
Central Provinces and Berar	99,876	10,600
Burma	239,707	14,407
Madras	142,280	20,393
Bombay	1,36,321	27,056
Bihar and Orissa	83,161	14,267
Rajasthan	54,228	2,194
Ajmer Merwara	2,711	1,469
Coorg	1,582	225
Delhi	993	1,612

Organisation of Police

The Police Station Officer (the Sub-Inspector) is responsible for the investigation of all cognisable crimes that is to say all offences in which the Police can arrest without a warrant from a Magistrate, which occur within his jurisdiction. He is also held responsible for the maintenance of the public peace and the prevention of crime. From the point of view of the Indian Ryot, he is the most important Police Officer in the District and may rightly be considered the backbone of the Force.

Superior to the Sub-Inspector is the Inspector who holds charge of a Circle containing 4 or 5 Police Stations. His duties are chiefly those of supervision and inspection. He does not ordinarily interfere in the investigation of crime unless the conduct of his subordinates renders this necessary.

The Inspector is usually a selected and experienced Sub-Inspector. Each District contains 3 or 4 Circles and in the case of large Districts is divided into 2 Sub-divisions—one of which is given to an Assistant Superintendent of Police, a European gazetted Officer. The Police Force in each District is controlled by a District Superintendent of Police who is responsible to the District Magistrate (Collector or Deputy Commissioner) for the detection and prevention of crime and for the maintenance of the public peace and to his Deputy Inspector General and Inspector General for the internal administration of his Force. Eight or ten Districts form a Range administered by a Deputy Inspector General, an officer selected from the ranks of the Superintendents. At the head of the Police of each Province is the Inspector General who is responsible to the Local Government for the administration of the Provincial Police.

Separate but recruited from the District Force is the Criminal Investigation Department which is under the control of a specially selected European Officer of the rank and standing of a Deputy Inspector General. The Criminal Investigation Department usually called the C. I. D. is mainly concerned with political inquiries, sedition cases and crimes with ramifications over more than one District or which are considered too important to leave in the hands of the District Police. It is a small force of Sub-Inspectors and Inspectors who have shown their ability and intelligence when working in the mofussil and forms in each Province a local Scotland Yard.

The larger Cities of Calcutta, Bombay and Madras have their own Police Force independent of the Inspector General of Police and under the control of a Commissioner and 2 or more Deputies. For Police purposes each city is divided into divisions. In Calcutta a division is in charge of a Deputy Commissioner of Police. In Bombay and Madras a Superintendent of Police is in charge of a Division. In Bombay however the Superintendents are Gazetted Officers, and two of them are Indians. Each division is sub-divided into a small number of Police Stations, the station being in charge of an Inspector assisted by Deputy Inspectors, Indian Sub-Inspectors and European Sergeants.

The Supreme Government at Delhi and Simla keeps in touch with the Provincial Police by means of the Director of Criminal Intelligence and his Staff. The latter do not interfere in the Local Administration and are mainly concerned with the publication of information regarding international criminals, inter-provincial crime and Political enquiries in which the Supreme Government is interested.

Recruitment—The constable is enlisted locally. Certain castes are excluded from service and the formation of cliques by filling up the Force from any particular caste or locality is forbidden. In some Provinces a fixed percentage of foreigners must be enlisted. Recruits must produce certificates of good character and pass a medical test. They must be above certain standards of physical development. The constable rises by merit to the rank of Head Constable and prior to the Police Commission could rise to the highest Indian subordinate appointments. Since 1906 his chances of promotion have been greatly curtailed; this has certainly lowered the standard coming forward for service in the Force in the lower ranks.

The Sub-Inspector until 1906 was a selected Head Constable, but Lord Curzon's Commission laid down that Sub-Inspectors should be recruited direct from a socially better class of Indians. In most Provinces eighty per cent. of the Sub-Inspectors are selected by nomination, trained for a year or 18 months at a Central Police School, and after examination appointed direct to Police Stations to learn their work by actual experience. It is too early to judge this system by results, but it has no doubt great disadvantages and undetected crime in India is increasing rapidly.

An Inspector is generally a selected Sub-Inspector. Direct nomination is the exception not the rule.

The Deputy Superintendent, a new class of officer instituted on the recommendation of the Commission is an Indian gazetted officer and is the native Assistant to the District Superintendent of Police. He is either selected by special promotion from the ranks of the Inspectors or is nominated direct, after a course at the Central Police School.

Prior to 1893 the gazetted ranks of the Force were filled either by nomination or by regimental officers seconded from the Army for certain periods. In 1893 this system was abandoned and Assistant Superintendents were recruited by examination in London. On arrival in India they were placed on probation until they had passed their examinations in the vernacular, in law and in riding and drill. The establishment of Police Training schools in 1906 has done much to improve the training of the Police. Probationer and selection by examination has given Government a better educated officer, but open competition does not reveal the best administrators and should be tempered as in the Navy, by selection.

Internal Administration—The District Force is divided into 2 Branches—Armed and Unarmed. As the duties of the armed branch

consist of guarding Treasures, escorting treasure and prisoners and operating against dangerous gangs of dacoits they are maintained and controlled on a military basis. They are armed and drilled and taught to shoot after military methods. The unarmed branch are called upon to collect fines magisterially inflict ed serve summonses and warrants, control traffic, destroy stray dogs, extinguish fires, enquire into accidents and non-cognizable offences. The lower grades are clothed and

housed by Government without expense to the individual. The leave rules are fairly liberal but every officer European or Native must serve for 30 years before he is entitled to any pension unless he can obtain a medical certificate invaliding him from the service. This period of service in an Eastern climate is generally admitted to be too long and the efficiency of the Force would be considerably improved if Government allowed both the officers and men to retire after a shorter period of service.

STATISTICS OF POLICE WORK.

The undesirability of attaching undue importance to statistical results as a test of the merits of police work was a point upon which considerable stress was laid by the Indian Police Commission who referred to the evils likely to result from the prevalence among subordinate officers of an impression that the advancement of an officer would depend upon his being able to show a high ratio of convictions both to cases and by persons arrested, and a low ratio of crime. The objection applies more particularly to the use of statistics for small areas but they cannot properly be used as a basis of comparison even for larger areas without taking

into account the differences in the condition under which the police work and it may be added they can at the best indicate only very imperfectly the degree of success with which the police carry out that important branch of their duties, which consists in the prevention of crime. These considerations have been emphasized in recent orders of the Government of India. Subject to these observations the figures below may be given as some indication of the volume of work falling upon the police and of the wide differences between the conditions and the statistical results in different provinces. These statistics of cognizable crime —

JAILS

Jail administration in India is regulated generally by the Prisons Act of 1894 and by rules issued under it by the Government of India and the local governments. The punishments authorised by the Indian Penal Code for convicted offenders include transportation, penal servitude, rigorous imprisonment (which may include short periods of solitary confinement) and simple imprisonment. Accommodation has also to be provided in the jails for civil and under-trial prisoners.

The origin of all jail improvements in India in recent years was the Jail Commission of 1889. The report of the Commission which consisted of only two members, both officials serving under the Government of India, is extremely long and reviews the whole question of jail organization and administration in the minutest detail. In most matters the Commission's recommendations have been accepted and adopted by Local Governments, but in various matters, mainly of a minor character, their proposals have either been rejected *ad initio* as unsuited to local conditions abandoned as unworkable, after careful experiment or accepted in principle but postponed for the present as impossible.

The most important of all the recommendations of the Commission, the one that might in fact be described as the corner stone of their report is that there should be in each Presidency three classes of jails: in the first place, large central jails for convicts sentenced to more than one year's imprisonment; secondly, district jails at the head quarters of districts; and thirdly, subsidiary jails and lock-ups for under-trial prisoners and convicts sentenced to short terms of imprisonment. The jail department in each province is under the control of an Inspector General, he is generally an officer of the Indian Medical Service with jail experience and the Superintendents of certain jails are usually recruited from the same service. The district jail is under the charge of the civil surgeon and is frequently inspected by the district magistrate. The staff under the Superintendent includes, in large central jails, a Deputy Superintendent to supervise the jail manufactures and in all central and district jails one or more subordinate medical officers. The executive staff consists of jailors and warders and convict-petty officers are employed in all central and district jails, the prospect of promotion to one of these posts being a strong inducement to good behaviour. A Press Note issued by the Bombay Government in October 1915 says:— "The cadre and emoluments of all ranks from Warder to Superintendent have been repeatedly revised and altered in recent years. But the Department is not at all attractive in its lower grades. The two weak spots in the jail administration at the moment are the insufficiency of Central Prisons and the difficulty of obtaining good and sufficient warders."

The Jails Committee.—Since the introduction of the reformed constitution the maintenance of the Indian Prisons falls within the sphere of provincial Governments, and is subject

to all India legislation. The obvious advisability of proceeding along certain general lines of uniform application led to the appointment of a Jails Committee, which conducted the first comprehensive survey of Indian prison administration which had been made for thirty years. Since then, the Committee has been urged upon the necessity of improving and increasing the accommodation of prisoners, of providing a better class of warders, of providing education for prisoners, and of developing prison industries as a means to meet the needs of the community. Departments of Government. Other important recommendations included the separation of civil from criminal offenders, the adoption of the English system of release on license in the case of adolescents and the creation of children's courts. The Committee found that the reformatory side of the Indian system needed particular attention. They recommended the segregation of habituals from ordinary prisoners, the provision of separate accommodation for prisoners under trial, the institution of the star-class system and the abolition of certain practices which are liable to harden or degrade the prison population.

Employment of Prisoners.—The work on which convicts are employed is mostly carried on within the jail walls, but extramural employment on a large scale is sometimes allowed as for example, when a large number of convicts were employed in excavating the Jhelum Canal in the Punjab. Within the walls prisoners are employed on jail service and in workshops. The main principle laid down with regard to jail manufactures is that the work must be penal and industrial. The industries are on a large scale, multifarious employment being condemned while care is taken that the jail shall not compete with local traders. As far as possible industries are adapted to the requirements of the consuming public departments and printing, tent-making, and the manufacture of clothing are among the commonest employments. Schooling is confined to juveniles, the experiment of teaching adults has been tried but literary instruction is unsuitable for the class of persons who fill an Indian jail.

The conduct of convicts in jail is generally good, and the number of desperate characters among them is small. Failure to perform the allotted task is by far the most common offence. In a large majority of cases the punishment inflicted is one of those classed as "minor." Among the major punishments flogging takes the first place. Corporal punishment is inflicted in relatively few cases and the number is steadily falling. Punishments were revised as the result of the Commission of 1889. Two notable punishments then abolished were shaving the heads of female prisoners and the stocks. The latter, which was apparently much practised in Bombay, was described by the Commission as inflicting exquisite torture. Punishments are now scheduled and graded into major and minor. The most difficult of all jail problems is the internal maintenance of order among the prisoners for which purpose paid

wardens and convict wardens are employed. With this is bound up the question of a special class of well-behaved prisoners which was tried from 1905 onwards in the Thana Jail.

Juvenile Prisoners—As regards youthful offenders—i.e. those below the age of 16—the law provides alternatives to imprisonment, and it is strictly enjoined that boys shall not be sent to jail when they can be dealt with otherwise. The alternatives are detention in a reformatory school for a period of from three to seven years but not beyond the age of 18, discharge after admonition, delivery to the parent or guardian on the latter executing a bond to be responsible for the good behaviour of the culprit and whipping by way of school discipline.

The question of the treatment of young adult prisoners has in recent years received much attention. Under the Prisons Act prisoners below the age of 18 must be kept separate from older prisoners, but the recognition of the principle that an ordinary jail is not a fitting place for adolescents (other than youthful habituals) who are over 16 and therefore ineligible for admission to the reformatory school has led Local Governments to consider schemes for going beyond this by treating young adults on the lines followed at Borstal and considerable progress has been made in this direction. In 1906 a special class for selected juveniles and young adults was established at the Dharwar Jail in Bombay. In 1908 a special juvenile jail was opened at Alipore in Bengal. In 1909 the Madkila jail in Burma and the Tanjore jail in Madras were set aside for adolescents, and a new jail for juvenile and juvenile adult convicts was opened at Bareilly in the United Provinces. And in 1910 it was decided to concentrate adolescents in the Punjab at the Lahore District Jail which is now worked on Borstal lines. Other measures had previously been taken in some cases: a special reformatory system for juvenile adults had for example been in force in two central jails in the Punjab since the early years of the decade and Borstal enclosures had been established in some jails in Bengal. But the public is slow to appreciate that it has a duty towards prisoners and but little progress has been made in the formation of Prisoners Aid Societies except in Bombay and Calcutta, though even in these cities much remains to be done.

Reformatory Schools—These schools have been administered since 1899 by the Education department and the authorities are directed to improve the industrial education of the inmates to help the boys to obtain employment on leaving school and as far as possible to keep a watch on their careers.

Transportation—Transportation is an old punishment of the British Indian criminal law and a number of places were formerly appointed for the reception of Indian transported convicts. The only penal settlement at the present time is Port Blair in the Andaman Islands.

Commission of Enquiry 1919—A committee was appointed to investigate the whole system of prison administration in India with special reference to recent legislation and experience in Western countries. Its report published in 1921, was summarised in the

Indian Year Book 19-2 (pages 670-671). A number of reforms were advocated but owing to financial stringency it has not yet been possible to introduce some of the more important of them.

Fines and Short Sentences—These sections of the Indian Penal Code under which imprisonment must be awarded when a conviction occurs should be amended so as to give discretion to the court. Sentences of imprisonment for less than twenty-eight days should be prohibited.

The Indeterminate Sentences—The sentence of every long-term prisoner should be brought under revision as soon as the prisoner has served half the sentence. In the case of the non-habitual and two-thirds of the sentence in the case of the habitual, remission earned being counted in each case. The revision should be carried out by a Reviewing Board composed of the Inspector General of Prisons, the Sessions Judge, and a non-official. In all cases the release of a prisoner on parole should be made subject to conditions, breach of which would render him liable to be remanded to undergo the full original sentence. The duty of seeing that a prisoner fulfils the conditions on which he was released should not be imposed upon the police or upon the village headman but special officers to be termed parole officers should be appointed for the purpose. These parole officers should possess a good standard of education though not necessarily a university degree and should both protect and advise the released prisoner and report breaches of the conditions of release.

Transportation and the Andamans—If any fresh attempt at colonisation is made it should be in an entirely new locality. A fresh attempt at colonisation in the Middle Andaman is not recommended. The retention of the settlement at Port Blair on the present lines is not recommended. The entire abandonment of the Andamans as a place of deportation is not recommended. Deportation to the Andamans should cease except in regard to specially dangerous prisoners and any others whose removal from Indian jails is considered by the Government to be in the public interests. The existing restrictions as to age and physical condition of prisoners sentenced to transportation to the Andamans should unless special medical grounds exist in any particular case cease to apply. The Indian Penal Code should be amended by the substitution of rigorous imprisonment for transportation. In provinces where the available prison accommodation will not permit of the immediate cessation of deportation of all but selected prisoners the Star class should be the first and the habitual the last to be detained in Indian jails. No female should in future be deported to the Andamans and those now there should be brought back to India and distributed among the Provinces to which they belong. In those Provinces where the jails are insufficient to detain prisoners now deported additional accommodation should be provided as soon as possible.

Criminal Tribes—The first essential of success in dealing with the criminal tribes is the provision of a reasonable degree of economic

comfort for the people. It is therefore of paramount importance to locate settlements where sufficient work at remunerative rates is available. Large numbers of fresh settlers should never be sent to a settlement without first as-

certaining whether there is work for them. Commitment to settlements should, as far as possible, be by gangs not by individuals. It is desirable to utilise both Government and private agency for the control of settlements.

The variations of the jail population in British India during the five years ending 1925 are shown in the following table.—

	1925	1924	1923	1922	1921
Jail population of all classes on 1st January	128 314	126 478	134 286	126 917	118 250
Admissions during the year	536,219	538 428	530 590	539 001	593,348
Aggregate	664,533	662 906	669 876	765 918	711,598
Discharged during the year from all causes	534 779	534 455	548 398	531 628	584,681
Jail population on 31st December	129 754	128,451	126 478	134 290	126 917
Convict population on 1st January	110 810	109 230	114 817	106 117	100,541
Admissions during the year	158 139	158,466	158,336	185 092	178,055
Aggregate	268 449	267 696	273 153	291 209	276 607
Released during the year	158 997	155 219	161 186	173 313	167 408
Transported beyond seas	616	571	329	1 614	687
Casualties, &c.	2,089	2,340	2 428	8 244	2,832
Convict population on 31st December	111,895	110 949	108 314	114 817	106 117

More than one half of the total number of convicts received in jails during 1925 came from the classes engaged in agriculture and cattle tending, about 130 000 out of 168 000 are returned as illiterate.

The percentage of previously convicted prisoners was 20.29 as against 19.95 in 1924 while the number of youthful offenders rose from 342 to 343. The following table shows the nature and length of sentences of convicts admitted to jails in 1923 to 1925.—

Nature and Length of Sentence	1925	1924	1923
Not exceeding one month	82 494	80 675	82,884
Above one month and not exceeding six months	64 286	64 933	62,262
“ six months “ “ one year	31 429	30 972	38 625
“ one year “ “ five years	28 290	24 975	22,223
“ five years “ “ ten	3 541	3,560	4 606
Exceeding ten years	350	514	282
Transportation beyond seas—			
(a) for life	1 540	1 475	1 708
(b) for a term	117	114	893
Sentenced to death	988	942	1 158

The total daily average population for 1925 was 104,227 the total offence dealt with by criminal courts was 2.3 and by Superintendents 127 095. The corresponding figures for 1924 were 108 844,214 and 133 665 respectively.

The total number of corporal punishments showed a decrease viz. from 242 to 210. The total number of cases in which penal diet (with and without solitary confinement) was prescribed was 4 988 as compared with 6,386 in the preceding year.

Total expenditure increased from Rs 1,58 81 900 to Rs. 1 65 58,713 and total cash earnings increased from Rs 16,36 716 to Rs 24 71 894, there was consequently an increase of Rs. 2,08,577 in the net cost to Government.

The death rate in 1924 excluding the Andamans was 14.42 and including of them 16.84, both being below those for 1923 (14.95 and 16.6) and the decennial mean (22.04 and 23.81).

The Laws of 1927

BY

PATANLAL AND DHIRAJLAL,

Editors, "Bombay Law Reporter"

1. Indian Limitation (Amendment) Act—Following the recommendations made by the Civil Justice Committee the Act introduces two changes of a far reaching character. An amendment has been made in section 20 whereby payment of interest made after January 1 1923 gives a fresh starting point of limitation only if the fact of payment appears either in the handwriting of the person making the payment or in writing signed by him (s. 2). The second amendment made is in section 3. An acknowledgment of liability made by a Hindu widow or other limited owner assures against the reversioner. And where a liability has been incurred by the manager of a joint Hindu family on behalf of a Hindu undivided family it is deemed to have been made on behalf of the whole family (s. 3). This copy of Article 132 has been enlarged by an explanation which says that *Mahalan* and *Bhagti* and the value of agricultural or other produce secured by a charge on immovable property are money charged upon immovable property (s. 4).

2. The Indian Registration (Amendment) Act—In the year 1926 the Privy Council held in *Dagul Singh v. Indar Singh* (28 Bom. L.R. 187) that where an agreement for the sale of immovable property contained a recital or payment of earnest money or purchase money it was compulsorily registrable. The effect of the amendment is to negative that decision and a retrospective operation is given to the amendment. Thus all agreements are valid even if they are not registered.

3. Steel Industry (Protection) Act—The Act provides two safe guards for the protection of steel industry in India. Where it appears that steel articles of British manufacture are being imported into India at prices which render ineffective the protection granted to similar articles manufactured in India the duty on the former articles may be further raised and the same protection is given against similar articles of foreign manufacture imported into India. The Governor General in Council is empowered to appoint a Commission before March 31 1934 to enquire if the further continuance of such protection is necessary.

4. The Currency Act—This Act is the outcome of the recommendations made by the Royal Commission on Indian Currency and Finance. It raised a volume of keen controversy on the question of *par*. The rupee is here stabilized at the rate of 1s. 6d. per rupee. As a step towards the attainment of that goal the sovereign and half sovereign are demonetized in India (s. 2). Sections 4 and 5 lay on the Government of India a statutory obligation to buy gold or to sell gold or gold exchange at the gold points at the accepted gold parity of the rupee, i. e., Rs. 21 8-10 per tola of fine gold.

5. The Finance Act—The Act gives the annual validity to the rates of postage and the scale for the levy of the income tax and super tax now existing. It has made some important changes. The stamp duty of one anna on cheques is abolished from July 1 1927 the import duty on rubber stamps and rubber seals and on inks and tea has been abolished. The import duty on unmanufactured tobacco has been raised from Rs. 1 to Rs. 1 80 per lb. while that on motor cars and motor cycles is reduced from 30 per cent to 20 per cent and on tyre and tubes is reduced from 30 per cent to 15 per cent *ad valorem*.

6. The Madras Salt (Amendment) Act—In 1889 a flat rate of five per cent was levied on salt to meet the expenses incurred in maintaining the preventive staff. Since then the duty on salt was reduced by fifty per cent and the pay of the staff had to be raised. The Act therefore abolishes the old rate and leaves it to the Central Board of Revenue to impose such a rate as would cover the expenses of the preventive staff.

7. The Provident Funds (Amendment) Act—The benefit of the Provident Funds Act is here extended to persons employed in durational institutions or employed by bodies existing solely for educational purposes.

8. The Sea Customs (Amendment) Act—The Sea Customs Act allowed a partial rebate of duty on goods which were deteriorated or damaged prior to entry only in those cases when the duty was leviable *ad valorem*. This privilege is now extended to duty leviable on quantity and not on value. This affects sugar and paper.

9. The Indian Limitation Second (Amendment) Act—The amendment removes a great hardship in the law of extinction of claims. An application for execution has always the tendency to lengthen out and in many if not in most of the cases its duration is more than ten years. But in order to keep the decree alive the decree holder was compelled to file a fresh application to execute the decree regardless of the result of the pending application. This state of affairs only served to complicate matters. Now however the decree holder has a period of three years from the date of deposit of his pending application within which to file another application to execute the decree. Further where a decree holder has recovered an amount in execution but has been ordered by the Appellate Court to refund the period of limitation to enforce the refund runs from the date of the appellate decree.

10. The Repealing and Amending Act—The constitution of the Air Force in India has necessitated its being placed on the statute book. The Air Force is placed on a par with

Military and Naval Forces and its officers and men are subjected to the same restrictions as Military men and Naval men are in various Acts of Indian Legislature. There is also a provision of far reaching consequence. The term attested was defined aforesaid in the Transfer of Property Act in 1908. That definition is now given a retrospective effect. The effect of it is that where a document is executed by a person and the attestations are made not at the time of execution but are made afterwards at the request of the executant the attestations are valid though none of the attesting witnesses has seen the actual execution of the document. The intention of the law removes the hardship caused by the Privy Council decision in *Shamji Tattar v. Abdul Kadar Hanthun*.

11. The Insolvent (Amendment) Act—The object of the amendment is to speed up insolvent proceedings in Presidency towns. Where an insolvent who has obtained an adjudication order from the Court fails to prosecute an application for his order has a liquidation order is liable to be cancelled by the Court and he is not at liberty to present another application for adjudication in the same fact unless leave of the Court has been first obtained. If such an insolvent fraudulently obtains an adjudication order it is liable to be cancelled by the Court *ex officio* or on the application by the Official Assignee or any creditor.

12. The Repealing and Amending Act—This Act effects small changes in a number of legislative Acts which are of no interest to a general reader.

13. The Indian Bar Councils (Amendment) Act—In spite of great hopes raised at the time the Indian Bar Councils Act was passed in 1926 its provisions have for the most part remained so far a dead letter. Nothing seems to have been done to carry out its provisions. One more amendment has been made upon that dead pile. The point of contention among members of the Bar is on what constitutes a date among all the various dates on which they are enrolled and it is a barrier by the date on which he is called to the Bar. An Advocate General has the right of precedence over all other advocates and King's Counsel has precedence over all advocates except the Advocate General.

14. The Indian Merchant Shipping (Amendment) Act—The object of this Act is protection of pilgrim traffic. When a ship is meant for conveyance of pilgrims from an Indian Port its master, owner or agent should communicate to the Pilgrim Officer (1) the Port in British India from which it is to commence its voyage or such port which it proposes to touch for embarking pilgrims (2) the class tonnage and age of the ship (3) the maximum number of passenger tickets for each class and the price of such tickets and (4) the date on which the ship is to sail from or touch any such port. The above information should also be exhibited in a prominent place in the port (209 B). Failure to observe the above requirements can attract a penalty of fine extending to Rs. 1,000. Where a ship is guilty of wilful delay, the owner or agent is liable to

pay compensation to each pilgrim at the rate of Rs. 1 per every completed day (209 C). If the proposed ship is unable to start on the appointed day it is competent to the owner to substitute another ship of the same class and tonnage with the permission of the Pilgrim Officer (209 D).

15. The Indian Divorce (Amendment) Act—Full details thereof are in the other correspondence with King's Printer in London. The necessity for a King's Printer was felt in Bombay in a divorce case filed by the late Sir Dinshaw Bhabha some time ago. It is he who keeps a watch over divorce proceedings and makes it his business to see that no fraudulent or collusive divorces are obtained from the Court. Section 17 A is now added to the Indian Divorce Act. It creates the duty of King's Printer. It is his duty to show cause why a decree for dissolution of marriage should not be made absolute or should not be confirmed.

16. The Indian Forests Act—This Act consolidates the Indian Forests Act of 1926 and its six amending Acts. Part I sets out the definitions of terms used in the Act. Part II deals with the constitution of reserved forests over the lands in which Government claim proprietary rights and the governance of such rights (ss. 3 to 27). The next Part (ss. 28) deals with village forests in which the village community have all the rights saved by Government in reserved forests. On such forest the villagers have a right to take timber or other forest produce or pasture. Then come protected forests in which also Government have proprietary right though they are not reserved forests. In such forests Government grant licenses to private citizens and remove the taxes or duties for forest produce on payment of money of cutting and pasturing of cattle and doing anything (ss. 38). The commission of any offence with regard to such forest is visited with the penalty of imprisonment for six months or fine which may extend to five hundred rupees (ss. 33). Chapter V provides for control over forests and lands not being the property of Government. Section 46 empowers Government to impose duties on timber and other forest produce and the Chapter following defines the powers of control of timber and other forest produce in transit. Chapter VIII deals with the collection of forest and strand of timber. Cattle trespassing in a reserved or protected forest may be seized and impounded by any forest or police officer (ss. 70). The constitution and powers of forest officers are defined in Chapter XI. Section 74 enacts that every person who is interested in a forest or who lives in a village adjacent to a forest is bound when called upon to assist a forest officer to extinguish a forest fire or to prevent it from spreading or to prevent the commission of any forest offence. Government have the right to recover any money due to them for any forest produce as if it was an arrears of land revenue (ss. 82) and they possess a lien for it on the forest produce (ss. 83).

17. The Indian Lighthouse Act—There were three separate Coast Light Acts for Madras, Burma and Sind. Each worked on a different principle and all lacked in co-ordination. Difficulty was experienced in a uniform system

of collecting light-house dues. It is therefore found necessary to enact one unifying Act. The superintendence and management of all general light houses are vested in the Governor General in Council (s. 5) who is also given the control of all local light houses (s. 7). The same authority has the power to levy and collect all light-house dues (s. 9). If the Master of any ship refuses to pay such dues, the Customs collector may seize the ship and detain the same until they are paid (s. 13). The light-dues payable at one port are recoverable at another (s. 18). The Master or owner who evades payment of light-dues is liable to pay a fine 5 times the amount of the payment (s. 14). Any ship belonging to His Majesty or the Government or to a Foreign Prince or State and not carrying cargo or passengers for freight or fares or any ship of a tonnage of less than fifty tons are exempt from payment of light-dues (s. 19).

18 The Indian Succession (Amendment) Act—Sections 223 and 224 of the Indian Succession Act have been so amended that now the consent of the husband is no longer necessary before a will or letters of administration can issue to a married woman. Section 10 has been added to the Married Women's Property Act whereby a husband is not liable for the wife's breach of trust or devastation unless he has acted or intervened in the trust or administration.

19 The Presidency Towns Insolvency (Amendment) Act—In the working of the above Act two defects were discovered which led to divergence of view between different Indian High Courts. The first one was as to the conflict between sections 7 and 36 which was responsible for differing views between Calcutta and Madras High Courts. It is now settled in favour of Calcutta by enacting that debts can be realized by the Insolvency Court from the debtors of the insolvent only when those debts are admitted. The second amendment legalizes the practice that existed in Bombay and Bangalore High Courts of calling upon an insolvent to file lists of creditors and debtors before the passing of an adjudication order.

20 The Bamboo Paper Industry (Protection) Act—The main object of this Act is effectively to exclude newspaper paper from any protective tariff. At the same time the protection cord is tightened round printing paper which contains no mechanical wood pulp as well as writing paper including ruled or printed forms and account and manuscript books and the binding thereof. A rate of one anna per pound or an ad valorem rate of 15 per cent whichever is higher is imposed on them.

21 The Indian Securities (Amendment) Act—Where a person holding a Government security loses it there is an elaborate machinery to prevent fraud before a duplicate security is issued to him. This machinery could well be avoided when the owner is dead by his legal representative taking out a succession certificate to his estate. Such a representative also has now to pursue all the intricacies provided before he succeeds in obtaining a duplicate of a lost or stolen security. It is also made clear that

in such a case no interest can be claimed in respect of any period which has elapsed after the earliest date on which the demand could have been made for the payment of the amount due on such security.

22 The Societies Registration (Amendment) Act—The benefit of the Societies Registration Act is extended to Societies or the diffusion of political education.

23 The Indian Tariff (Cotton Yarn) Amendment Act—Japanese yarn which forms eighty per cent of the total import of foreign cotton yarn is depressing the Indian mill industry to a great extent. There has been a five per cent ad valorem duty on such yarn but it is not enough to protect the Indian industry. An alternative duty of 1½ anna per pound has therefore been imposed which is to remain in force till Mar. 31, 1929. It is expected that by then the able shift of women workers in Japan will cease and there will remain no necessity of additional protection.

24 The Indian Tariff (Amendment) Act—The import duty on machinery and mill stores in the textile industry is removed. The 2½ per cent import duty on printing machinery and material is also removed.

25 The Criminal Law (Amendment) Act—Early in 1926 the Rajah published a book called "Hanga-Raj" which contained a scurrilous attack on the person of Maharaja. He was convicted by the Magistrate under s. 153A of the Indian Penal Code but was eventually acquitted by the High Court of Lahore. About the same time a newspaper editor published another attack on the person of Ruda Varman. He too was convicted by the Magistrate. In view of the previous ruling of the Lahore Court above referred to a bench of two Judges was constituted for hearing the appeal. The accusation against him was upheld. These two cases ended the unsatisfactory state of the law with reference to scurrilous writings. A new section 153A was therefore added to the Indian Penal Code under which any person who with the deliberate and malicious intention of outraging the religious feelings of any class of people by speech or writing insults the religion or the religious feelings of that class is liable to the punishment of imprisonment which may extend to two years, or with fine or with both. Scurrilous literature can be prosecuted and punished by Government. A prosecution under the section can start only after sanction from Government.

26 The Contaminations (Amendment) Act—A number of minor amendments have been introduced into the Contamination Act. The President of a Contaminant Board retains his office though he is temporarily absent from the Contaminant Board. The Local Government has the power to remove any member of the Contaminant Board who incurs a disqualification or who keeps absent from the meeting for three consecutive months or who being a legal practitioner appears in a case against the Contaminant Board. It is now the privilege of the Local Government to permit the levy of any ordinary tax by the Contaminant Board. It is permissible to the

cantonment authority to invest the cantonment funds in fixed deposit in any approved indigenous bank in preference to the Imperial Bank provided the previous sanction of the Local Government is obtained to suit the course.

27 Indian Emigration (Amendment) Act—The object of this is to simplify the inspection of emigrants and to bring into force the resolutions arrived at the eighth session of the International Labour Conference at Geneva.

28 The Income tax (Amendment) Act—This Act remedies a defect which has been discovered in the assessment of tea companies for the purpose of income tax.

29 The Aden Civil and Criminal Justice High Court Jurisdiction (Amendment) Act—An appeal now lies to the High Court of Bombay against the judgment or order of the Resident in Aden or of an Additional Sessions Judge when such appeal is allowed by the Criminal Procedure Code. But no appeal shall

lie when the imprisonment awarded does not exceed six months or the fine imposed does not exceed Rs 500. An appeal against a judicial shall lie to the High Court. The Resident has now the power of reserving any point of law arising in any proceedings pending before him for the opinion of the High Court.

30 The Indian Divorce Second (Amendment) Act—Hitherto relief under the Indian Divorce Act could be obtained only by the Christian party to a mixed marriage. The Act is now amended so that even the non-Christian party to such a marriage may apply for relief under the Act.

31 The Assam Labour and Emigration (Amendment) Act—The expenditure of the Assam Labour Board is met from a cess on employers in Assam. Owing to changed conditions of labour in Assam this cess could not be levied from garden sardars. The Act is so amended that the cess can be levied from the garden sardars.

Labour.

Various causes have combined to give added importance to the great group of human activities concentrated under the generic term of Labour. India is still a predominantly agricultural country and more than seventy per cent of its people are dependent on the soil for their livelihood. Nevertheless a process of industrialisation has gone steadily forward. Calcutta and Bombay are great manufacturing cities. Whilst the jute mills dominate Calcutta and the cotton mills Bombay, there has grown up round these industries a substantial body of other manufactures. Another considerable manufacturing centre has developed at Cawnpore with cotton wool and leather factories. The textile industry of Bombay has overflowed into the Deccan and Ahmedabad and Solapur are considerable centres of manufacture with a lesser one at Bhiwand. In the Central Provinces the cotton mills of Nagpur are famous throughout India. The Province of Bihar and Orissa is the centre of the great coal mining trade having absorbed the bulk of the coal mines formerly included in the Province of Bengal. It also embraces the most remarkable example of scientific industrialism in India in the works of the Tata Iron and Steel Company at Jamshedpur where in what was jungle fifteen years ago a considerable city is springing up which will produce over a million tons of steel a year, and house subsidiary industries which combined with the iron and steel works will probably maintain a city of a quarter of a million in the near future. The railway works of the North-West-

ern Railway form the core of the industrialism of the Punjab where other manufactures are developing. The industrial expansion in India may be judged from the number of factories coming under the operation of the Indian Factories Act of 1911 as amended by the Act of 1924, which amounted to 2408 for the whole of British India during the year 1924 and rose to 3928 in 1925. The number of operatives in the same years were 1,45,094 and 1,94,908 respectively, the figures being of the daily average. The industrial development of the Punjab is certain in the comparatively near future to receive considerable impetus from the fruition of vocational education and the completion of the vast hydro-electric schemes.

Social Consciousness.

Side by side with this industrialization there has grown an increased social consciousness of the responsibility of the community towards Labour. The Government of India passed its first Factory Act in 1881 and amended it in 1891. But experience showed that these Acts permitted considerable abuses and largely as the result of the agitation raised by *The Times of India* in Bombay in 1905 against the excessive hours worked in the Bombay textile mills inquiries were set afoot which resulted in the passing of a new Act which limited the hours of labour in 1911. With the constitution of the League of Nations India as a signatory thereto became a participator in the decisions of the League on Labour questions.

India was represented at the International Labour Conference held in Washington in 1919 and by her ratifying various conventions it became obligatory on her to enact legislation giving effect to the decisions of the Conference. Another International Labour Conference was held at Geneva in 1920 to consider a number of questions relating to seamen such as the hours of labour, manning scales, accommodation, the provision for finding employment and other cognate questions and the Third and Fourth Sessions of the Conference were held at Geneva in 1921 and 1922. The Fifth Session of the Conference assembled on 22nd Oct. 1923 and dealt with only one item of importance—factory inspection. The Sixth Session of the International Labour Conference was held in Geneva from the 10th June to the 5th July 1924. Forty countries were represented at the Conference. The agenda of the Conference comprised (1) Development of facilities for utilisation of workers leisure (2) equality of treatment for national and foreign workers as regards compensation for accidents (3) weekly suspension of work for twenty-four hours in glass manufacturing processes where tank furnaces are used and (4) night work in bakeries. The Seventh Session was held at Geneva on the 21st May 1925. The agenda consisted of four items—(1) the report by the Director of the International Labour Office, (2) equality of treatment for national and foreign workers as regards compensation for accidents (3) weekly suspension of work for 24 hours in glass manufacturing processes where tank furnaces are used and (4) night work in bakeries. The Eighth Session of the Conference was held at Geneva on the 28th May 1926 and the Ninth Session immediately after on the 7th June. The Eighth Session dealt with the question of the simplification of the Inspection of Emigrants on Boardships. The Ninth Session was devoted entirely to the consideration of maritime problems—the main question dealt with being the International Codification of the Rules relating to Seamen's articles of agreement and general principles for the inspection of the conditions of work of seamen. India was represented at all of these Conferences. In 1922 India was admitted as one of the eight countries of industrial importance after protracted examination of

the grounds of her claim by experts appointed by the League of Nations. India therefore assumes responsibility for giving effect to the decisions of these conferences. If she ratifies them.

There has been a considerable extension of what is known as Welfare Work and although this so far depends on the individual activities of employers of labour the work is progressing well. The Sixth International Labour Conference which dealt with the question of the utilisation of workers spare time resolved that the International Labour Office should collect periodic information on the action taken in various countries for the development of facilities for the proper utilisation of the time during which workers are not actually employed. In May 1926 the Government of India requested all Local Governments to collect information on this subject from employers and employees associations and associations of social workers who conduct welfare work for the benefit of workers. The results of this enquiry which the Government of India hope to publish during the course of the year will be of considerable interest. Further there is the nascent Trade Union movement in India. This movement lies rather more on the surface than in deep roots but it lies up in times of labour unrest and is nominally at all events focused in The All India Trade Union Congress. The frequency of strikes and the lack of any means to hasten a solution have given rise to careful investigation of the possibility of establishing Boards of Conciliation and Arbitration. The increase of industrial unrest in the winter of 1920-21 led to the stimulation of public interest in labour questions. The fact that several of the more protracted strikes occurred in public utility services strengthened the demand that some efforts should be made towards a solution of the problem. In nearly every strike or lock-out of importance which has occurred in the last six years there has been a fairly strong demand from some section of the public for reference of the points at issue to arbitration. The last few years have therefore seen a remarkable change in the attitude of the State and the community towards Labour which under the more democratic constitution which now obtains is assured of a hearing in the Legislatures.

INDUSTRIAL SAFETY AND INSPECTION

The conditions of factory labour until 1913 were regulated by the Indian Factories Act of 1881 as amended in 1891. The chief provisions of the amended Act were Local Governments were empowered to appoint inspectors of factories and certifying surgeons to certify as to the age of children. A mid day stoppage of work was prescribed in all factories except those worked on an approved system of shifts and Sunday labour was prohibited subject to certain exceptions. The hours of employment for women were limited to 11, with intervals of rest amounting to at least an hour and a half, their employment between 8 p.m. and 5 a.m. was prohibited as a general rule except in factories worked by shifts. The hours of work for children (defined as persons below the age of 14) were

limited to seven and their employment at night time was forbidden; children below the age of nine were not to be employed. Provision was made for the fencing of machinery and for the promulgation of rules as to water supply, ventilation, the prevention of over-crowding, etc.

Hours Fixed

The next Factory Act was finally passed into law as Act XII of 1911.

The new Act extended the definition of "factory" so as to include seasonal factories working for less than four months in the year, shortened the hours within which children, and, as a general rule, women, may be employed and further restricted the employment of women by night by allowing it only in the

case of cotton-ginning and pressing factories. It also contained a number of new provisions for securing the health and safety of the operatives, making inspection more effective and securing generally the better administration of the Act. The most important feature of the Act, however, was the introduction of a number of special provisions applicable only to textile factories. The report of the Factory Commission showed that excessive hours were not worked except in textile factories. The Act for the first time applied a statutory restriction to the hours of employment of adult males by laying down that subject to certain exceptions, no person shall be employed in any textile factory for more than twelve hours in any one day. It is also provided in the case of textile factories that no child may be employed for more than six hours in any one day and that (subject to certain exceptions, among which are factories worked in accordance with an approved system of shifts) no person may be employed before 5-30 a.m. or after 7 p.m. (the new limits laid down generally for the employment of women and children).

The Amending Acts of 1922 and 1923

The ratification by India of the conventions adopted by the International Labour Conference held at Washington in 1919 necessitated radical revision of the Indian Factories Act of 1911. This was undertaken during the year 1921 and the Indian Factories Amendment Act 1922 (11 of 1922) introduced a series of important reforms including the adoption of a sixty hours week, the raising of the minimum age of children from 9 to 12, the prohibition of night work for women, the extension of the Act to a large number of small factories, drastic restriction of the exempting provisions etc. The Act was further amended in 1923. The principal object of the Amending Act of 1923 was the removal of a difficulty which had arisen in connexion with the law relating to the weekly holiday.

The Amending Act of 1923.

The experience gained during the three years which immediately followed the revision of the Act in 1922 indicated that the Amending Act had worked smoothly on the whole and that the main principles followed in 1922 commanded general acceptance. It was not considered necessary therefore to modify any of the main principles of the Act, but several administrative difficulties had arisen in connexion with some sections of the Act—one such difficulty relating to Section 41 which provided for intervals of rest. In practice it had proved difficult to enforce the provisions of this section in some industries. Local Governments were asked in June 1923 to consider a possible solution of the difficulty and to bring to the notice of the Government of India any difficulties which might have arisen in connexion with other provisions. On receipt of their replies a Conference of Chief Inspectors of Factories was convened. The Conference recommended a number of alterations designed by allowing greater elasticity in some directions and by increasing control in others to make for smoother working. The Factories Amendment Act of 1923 was therefore, based on the recommendations of that Conference and

on the opinions received from the Local Governments. The more important alterations effected include the widening of the definition of Factories, so as to bring within the control of the Act such establishments as Electrical Generating Stations, Water Works etc., the prevention of the issue of age certificates by Certifying Surgeons to children who are not fit for employment, the prevention of cleaning machinery in motion even by men in cases where Local Governments are of opinion that the work is attended by danger to the operatives, a clearer definition of the periods prescribed for intervals of rest, and while still preventing the employment of children in two factories on the same day, the permitting of women to work in two factories on the same day provided that the limit for hours of work are not exceeded.

The Present Law

In the following paragraphs it is intended to give the more important provisions of the present law on the subject by combining the Act of 1911, with the Amending Acts of 1922, 1923 and 1926. The Amending Act of 1922 came into force on the 1st July 1922 and that of 1926 on the 1st June 1926. The Act extends to the whole of British India including British Baluchistan and the Southern Parganas.

Hours of Employment

Rest periods in factories—(1) In every factory there shall be fixed—

- (a) for each person employed on each working day—
 - (i) at intervals not exceeding six hours, periods of rest of not less than one hour or
 - (ii) at the request of the employees concerned periods of rest at intervals not exceeding five hours of not less than half an hour each, the total duration of the periods of rest on that day not being less than one hour for each period of six hours work done.

Provided that, in lieu of the period provided under sub-clause (i) or sub-clause (ii) there may be fixed per each male person employed for not more than eight and a half hours on each working day at the request of the employees concerned and with the previous sanction of the local Government, a period of rest of not less than half an hour so arranged that no such person shall work for more than five hours continuously and

- (b) for each child working more than five and a half hours in any day a period of rest of not less than half an hour.

(2) The period of rest under clause (b) shall be so fixed that no such child shall be required to work continuously for more than four hours.

Weekly Holiday—(1) No person shall be employed in any factory on a Sunday unless—

- (a) he has had or will have, a holiday for a whole day on one of the three days immediately preceding or succeeding the Sunday, and

- (b) the manager of the factory has previous to the Sunday or the substituted day, whichever is earlier, given notice to the Inspector of his intention so to employ the said person and of the day which is to be substituted and has at the same time affixed a notice to the same effect in the place mentioned in section 38.

Provided that no such substitution shall be made as will result in any person working for more than ten consecutive days without a holiday for a whole day.

(2) Where in accordance with the provisions of sub-section (1) any person is employed on a Sunday in consequence of his having had a holiday on one of the three days preceding that Sunday that Sunday shall for the purpose of calculating the weekly hours of work of such person be deemed to be included in the preceding week.

Employment of Children—With respect to the employment of children in factories the following provisions shall apply—

- (a) no child shall be employed in any factory unless he is in possession of a certificate granted under section 7 or section 8 showing that he is not less than twelve years of age and is fit for employment in a factory and while at work carries either the certificate itself or a token giving reference to such certificate
- (b) no child shall be employed in any factory before half past five o'clock in the morning or after seven o'clock in the evening
- (c) no child shall be employed in any factory for more than six hours in any one day

Employment of Women—With respect to the employment of women in factories the following provisions shall apply—

- (a) no woman shall be employed in any factory before half past five o'clock in the morning or after seven o'clock in the evening
- (b) no woman shall be employed in any factory for more than eleven hours in any one day

Prohibition of Employment of Person in Two Factories on Same Day—No person shall employ or permit to be employed in any factory any child or save in such circumstances as may be prescribed, any other person whom he knows or has reason to believe to have already been employed on the same day in any other factory

Hours of Employment to be fixed—The manager of a factory shall fix specified hours for the employment of each person employed in such factory and no person shall be employed except during such hours

Limitation of Working Hours per Week—No person shall be employed in a factory for more than sixty hours in any one week.

Limitation of Working Hours per Day—No person shall be employed in any factory for more than eleven hours in any one day

Exceptions

Where it is proved to the satisfaction of the Local Government—

- (a) that any class of work in a factory is in the nature of preparatory or complementary work which must necessarily be carried on outside the limits laid down for the general working of the factory or
- (b) that the work of any class of workers is essentially intermittent or
- (c) that there is in any class of factories any work which necessitates continuous production for technical reasons or
- (d) that any class of factories supplies the public with articles of prime necessity which must be made or supplied every day or
- (e) that in any class of factories the work performed by the exigencies of the trade or by its nature cannot be carried on except at (i) stated seasons or (ii) at times dependent on the irregular action of natural forces

the Local Government may subject to the control of the Governor General in Council by notification in the local official Gazette exempt on such conditions if any as it may impose and in such areas as may be specified in the notification—

in case (a) such class of work from all or any of the provisions of sections 21, 22, and 23

in case (b) work of the nature described from all or any of the provisions of sections 21, 22, 23, 24, and 25

in case (c) work of the nature described from the provisions of sections 21, 22 and 23

in cases (d) and (e) such class of factories from the provisions of section 22

in case (e) (iv) such class of factories from the provisions of section 25

The system of inspection is being steadily improved by the appointment of more whole time inspectors with good technical qualifications in the principal industrial centres. The principle of appointing women as factory Inspectresses has already been accepted by the Government of Bombay and a beginning was made in the year 1924 by the appointment of Dr. Tahmina I. H. Curia as a whole-time Inspectress of Factories.

The Government of India have repealed the Workmen's Breach of Contract Act of 1859 with effect from 1st April 1924.

The Indian Mines Act 1923—The Indian Mines Act, 1923, received the assent of the Governor-General on the 23rd February 1923. It extends to the whole of British India including British Baluchistan and the Southern Parganas and came into force on the first day of July 1924. By this Act the definition of a mine was made clear, and the weekly hours of employment were limited to 60 hours for work above ground and 54 hours for work below ground.

INDUSTRIAL HOUSING

In most industrial centres in India the question of proper and adequate housing is engaging the attention of all public bodies and governments to an increasing extent. Employers themselves are becoming increasingly alive to this burning question and whenever finances permit tenements are constructed for the housing of the workmen. In cases where housing is provided the amounts charged for rent are just sufficient to cover the interest charges on the capital outlay. In Bombay City where the housing question was one of great difficulty a few years ago, the City Improvement Trust and the Development Directorate of the Government of Bombay have done much useful work in endeavouring to solve the problem. The scheme originally outlined by the Development Directorate for Industrial Housing aimed at a construction programme of 50,000 tenements providing accommodation for a quarter million people and to be completed within a period of eight years. This scheme was conceived in the boom period when labour conditions in Bombay were probably abnormal. By the end of December 1928 the Directorate had 16,544 tenements completely ready for occupation out of which 5,182 were let. The total number of chawls completely ready is 207. Government have decided that until the tenements now provided are fully occupied no additional land is to be taken up for Industrial Housing and that no new schemes are to be embarked upon without Government approval.

The average economic rent of the chawl works out at Rs. 16 per month per tenement. All the tenements are now provided with *Ackara*. The rents fixed for the present, per month for each tenement, vary from Rs. 5-6-0 at Worli to Rs. 9-3-0 at Dalkia Road. On this basis there is an annual loss of about Rs. 20 lakhs and this is being met from the cotton cess and other sources.

The City Improvement Trust in Bombay have also made very good progress in the direction of providing industrial housing. The Trust had a total number of 8,498 tenements ready at the end of December 1928 out of which 8,251 tenements were let for living purposes, 128 as shops, 59 as godowns and 10 as schools. 46 tenements were reserved for occupation by *Muhammadans* for offices and stores and as Superintendents' Quarters. The floor area of each tenement inclusive of a small verandah varied from 125 square feet to 176 square feet but the majority of the tenements were provided with the maximum floor space allowed. The average rent for a tenement in an Improvement Trust Chawl works out at Rs. 5-10 but the actual rents vary from Rs. 4-3-0 to Rs. 15-5-0. The maximum permissible population in adults for a total of 8,251 tenements has been fixed at 37,639. The actual population living in these tenements at the end of the year 1928 was 26,658 or 23,779 when equalised to adults.

INDUSTRIAL DISPUTES

Complete statistics in connexion with Industrial Disputes are now available for the whole of India. The importance that is being attached to the weapon of strike by the workmen in this land may be gathered from the figures published in respect of the industrial disputes in British India for which statistics have been collected.

The year 1925 was one of the worst years in the history of Industrial relations in the country. The number of disputes reported was 184 as against 133 in the preceding year. The number of workers involved in these disputes was 2,0423 and the number of working days lost amounted to 12,578,129.

The corresponding figures for 1924 were 312,462 and 8,790,918. The increase was due entirely to the strike in the Bombay

Cotton Mills in the last quarter of the year which accounted for the loss of about 11,000,000 working days. Of the strikes reported, only 44 or 33 per cent were successful in whole or in part. This represents a slightly higher proportion of successful strikes than in the preceding years. The corresponding figures for 1926 were much better. They indicated that there was less industrial strife in that year than in any other recent year. The number of strikes reported was 124 which was lower than that of any year since 1910 when the collection of statistics commenced. The total number of working days lost through strikes and lock-outs was approximately 11 lakhs against an average of 74 lakhs in the preceding five years. In fewer than one fifth of the strikes were the workmen successful in gaining any concession.

Province	Number of Disputes	Number of Workpeople Involved	Number of Working Days lost
Bengal	57	141,408	837,478
Bombay	57	25,201	17,390
Madras	2	131	133
Central Provinces and Berar	4	114	17,700
United Provinces	3	1,310	14,570
Punjab			
Bihar and Orissa	3	5,700	13,600
Azamgarh	1	600	1,000
Burma	1	10,647	133,345
British India	128	186,811	1,097,478

Industrial Disputes

499

The following table shows the data given above reclassified according to different classes of Industries —

Industry	No. of disputes	No. of Men involved	Days lost
Cotton Mills	5	22,713	70,027
Jute Mills	33	12,131	76,000
Engineering Works	4	1,224	8,707
Conservancy	14	8,080	2,812
Railway Workshops	3	1,000	10,000
Oilfields	1	10,000	133,840
Oil works	1	5,100	4,680
Printing works	1	900	3,700
Tea estate	1	900	1,000
Coal fields	1	1,000	1,000
Miscellaneous	12	600	82,010
Total	128	1,28,811	1,097,475

The next two tables show the causes of disputes by Provinces and Classes of Industries

Causes of Disputes by Provinces

CONCILIATION AND ARBITRATION

Of recent years much attention has been paid to the settlement of industrial disputes. The leading character of such disputes is that they are so often sporadic breaking out without warning grievances being formulated after striking instead of before. When such strikes occur there is no organised body of workers with whom to negotiate. The Government of Bengal took the leading part and in March 1921 appointed a committee which laid stress on the

value of Work Committees and favoured the institution of Conciliation Court, to deal with disputes in public utility services. It also favoured the appointment of a panel on which the Local Government could draw when constituting a Board to enquire into any dispute. The Bombay Government which had already explored the ground informally appointed a similar committee in November 1921, which re-reported in February 1922.

TRADE DISPUTES LEGISLATION

The valuable suggestions made by an Industrial Disputes Committee appointed in Bombay were considered both by the Government of Bombay and by the Government of India. On the 14th March 1923, the Hon. Sir Maurice Hayward, Home Member of the Bombay Legislative Council, to the effect that details were being worked out by the Government of Bombay in connexion with the drafting of a Bill to give effect to the recommendations of the Committee and that, as soon as Government were satisfied on these points legislation would be introduced in the Local Council as early as possible after the sanction of the Government of India had been obtained.

In July 1924 the Government of India informed the Government of Bombay that as they considered that this subject was one for All India legislation the Government of India were themselves preparing a Bill for early introduction in the Legislative Assembly and that the Local Government should not introduce the Bill which it contemplated doing in its own Council.

The Government of India prepared a Bill to make provision for enabling the investigation and settlement of Trade Disputes and this was published in August 1924. This Bill may be considered as being very wide and comprehensive in scope and extent. It covers all workmen including employees of the Government of India and of any Local Government. An important distinction is made between the general body of workmen by dividing these into employees in Public Utility Services and other employees. In the case of public utility services and in those services specially notified as such by the Governor General in Council it is provided that it shall not be lawful for any employer to declare or enforce a lockout or for any workman to

take part in a strike on account of any dispute unless due notice of the proposed lockout or strike has been sent to the prescribed officer. Such strikes or lockouts are not permitted until the expiry of thirty days after notice has been served in cases where no order has been made for reference of the dispute to a Board and until the expiry of ninety days after notice has been served in cases where such an order has been made or until the expiry of seven days after the publication of a report by a board whichever of the two dates may be earlier.

There is no separate provision in the Bill for Courts of Enquiry, Board of Arbitration or for Conciliation. The functions of these two separate institutions in Industrial Disputes Legislation are vested in the Government of India Bill with one body which is to be called the Board of Investigation and Conciliation. The members of these Boards are to be selected from permanent panels of (1) representatives of employees, (2) representative of employers and (3) persons to be appointed as Chairmen. The Government of India and each Local Government are to constitute their own panels. The functions of these Boards are to endeavour to bring about a settlement of any dispute by a fair and equitable investigation of the circumstances and causes of each dispute. The Government of India do not appear to be inclined to present this Bill to the Legislative Assembly just at present. No official declaration in connexion with this matter has been published but a special remark made by His Excellency the Viceroy in his speech at the annual meeting of the Associated Chambers of Commerce of India and Ceylon at Calcutta in 1925 is significant. His Excellency said: "The question of providing means of conciliation in trade disputes has been thoroughly explored but it would be premature to legislate on this question until the Trades Union Bill has become law."

TRADE UNION LEGISLATION

In March 1921 Mr. N. M. Joshi, M.L.A. moved a Resolution in the Legislative Assembly recommending that steps should be taken to provide legislation for the registration of Trade Unions and for the protection of Trade Unions. In September 1921 the Government of India addressed all Local Governments for their views after consulting the Interests concerned, on the question of the principle of such legislation and with regard to the form which it should take. On receipt of their replies a Bill was drawn up and this was again circulated for opinion. The Bill to provide for the Regis-

tration of Trade Unions and in certain respects to define the Law Relating to Registered Trade Unions in British India was introduced in the Simla Session of the Legislative Assembly on the 31st August 1922 and was referred to a Select Committee. It was passed by the Legislative Assembly on the 28th February and by the Council of State on the 26th February and received the assent of the Governor General on the 26th March 1922. The Trade Union Act was brought in to force on 1st June 1922.

The following paragraphs give the more important provisions of the Act —

DEFINITIONS

Registrar — Registrar means a Registrar of Trade Unions appointed by the Local Government under section 3 and the Registrar in relation to any Trade Union means the Registrar appointed for the province in which the head or registered office as the case may be of the Trade Union is situated

Trade Dispute — Trade Dispute means any dispute between employers and workmen or between workmen and workmen or between employers and employers which is connected with the employment or non-employment or the terms of employment or the conditions

of labour of any person and workmen mean all persons employed in trade or industry whether or not in the employment of the employer with whom the trade dispute arises

Trade Union — Trade Union means any combination whether temporary or permanent formed primarily for the purpose of regulating the relations between workmen and employers or between workmen and workmen or between employers and employers or for imposing restrictive conditions on the conduct of any trade or business and includes any federation of two or more Trade Unions

REGISTRATION

Mode of Registration — Any seven or more members of a Trade Union may, by subscribing their names to the rules of the Trade Union and by otherwise complying with the provisions of this Act with respect to registration apply for registration of the Trade Union under this Act

Provisions to be contained in the Rules of a Trade Union — A Trade Union shall not be entitled to registration under this Act unless the executive thereof is constituted in accordance with the provisions of this Act and the rules thereof provide for the following matters namely —

- (a) the name of the Trade Union
- (b) the whole of the objects for which the Trade Union has been established
- (c) the whole of the purposes for which the general funds of the Trade Union shall be applicable all of which purposes shall be purposes to which such funds shall lawfully be applicable and this Act
- (d) the maintenance of a list of the members of the Trade Union and adequate facilities for the inspection thereof by the officers and members of the Trade Union
- (e) the admission of ordinary members who shall be persons actually engaged or employed in an industry with which the Trade Union is connected and also the admission of the number of honorary or temporary members as officers required under section 22 to form the executive of the Trade Union
- (f) the conditions under which any members shall be entitled to any benefit assured by the rules and under which any fine or forfeiture may be imposed on the members

(g) the manner in which the rules shall be amended, varied or rescinded

(h) the manner in which the members of the executive and the other officers of the Trade Union shall be appointed and removed

(i) the safe custody of the funds of the Trade Union an annual audit in such manner as may be prescribed of the accounts thereof and adequate facilities for the inspection of the account books by the officers and members of the Trade Union and

(j) the manner in which the Trade Union may be dissolved

Cancellation of Registration — A certificate of registration of a Trade Union may be withdrawn or cancelled by the Registrar —

(a) on the application of the Trade Union to be so cancelled or as may be prescribed or

(b) if the Registrar is satisfied that the certificate has been obtained by fraud or mistake or that the Trade Union has ceased to exist or has wilfully and after notice from the Registrar contravened any provisions of this Act or allowed any rule to continue in force which is inconsistent with any such provision or has rescinded any rule providing for any matter provision for which is required by section 6

Provided that not less than two months previous notice in writing specifying the ground on which it is proposed to withdraw or cancel the certificate shall be given by the Registrar to the Trade Union before the certificate is withdrawn or cancelled otherwise than on the application of the Trade Union.

RIGHTS AND LIABILITIES OF REGISTERED TRADE UNIONS

Objects on which General Funds may be spent—The general funds of a Trade Union shall not be spent on any other objects than the following namely—

- (a) the payment of salaries allowances and expenses to officers of the Trade Union
- (b) the payment of expenses for the administration of the Trade Union including audit of the accounts if the general funds of the Trade Union
- (c) the prosecution or defence of any legal proceeding to which the Trade Union or any member thereof is a party when such prosecution or defence is undertaken for the purpose of securing or protecting any rights of the Trade Union as such or any rights arising out of the relations of any member with his employer or with a person whom the member employs
- (d) the conduct of trade disputes on behalf of the Trade Union or any member thereof
- (e) the compensation of members for loss arising out of trade disputes
- (f) allowances to members or their dependants on account of death old age sickness accidents or unemployment of such members
- (g) the issue of or the undertaking of liability under policies of assurance in the lives of members or under policies insuring members against sickness accidents or unemployment
- (h) the provision of educational social or religious benefits for members (including the payment of the expenses of funeral or religious ceremonies for deceased members) or for the dependants of members
- (i) the upkeep of a periodical published mainly for the purpose of discussing questions affecting employers or workmen as such
- (j) the payment in furtherance of any of the objects on which the general funds of the Trade Union may be spent of contributions to any cause intended to benefit workmen in general provided that the expenditure in respect of such contributions in any financial year shall not at any time during that year be in excess of one-fourth of the combined total of the gross income which has up to that time accrued to the general funds of the Trade Union during that year and of the balance at the credit of these funds at the commencement of that year and
- (k) subject to any conditions contained in the notification, any other object notified by the Governor General in Council in the *Gazette of India*

Constitution of a separate Fund for Political purposes.—(1) A registered Trade Union may constitute a separate fund, from contributions separately levied for or made to that fund

from which payments may be made for the promotion of civic and political interest of its members in furtherance of any of the objects specified in sub-section (2)

(2) The objects referred to in sub-section (1) are—

- (a) the payment of any expenses incurred either directly or indirectly by a candidate or prospective candidate for election as a member of any legislative body constituted under the Government of India Act or of any local authority before during or after the election in connection with his candidature or election or
- (b) the holding of any meeting or the distribution of any literature or documents in support of any such candidature or prospective candidature or
- (c) the maintenance of any person who is a member of any legislative body constituted under the Government of India Act or of any local authority or
- (d) the registration of electors or the selection of a candidate for any legislative body constituted under the Government of India Act or for any local authority or
- (e) the holding of political meetings of any kind or the distribution of any political literature or political documents of any kind

(3) No member shall be compelled to contribute to the fund constituted under sub-section (1) and a member who does not contribute to the said fund shall not be excluded from any benefits of the Trade Union or placed in any respect (either directly or indirectly under any disability or at any disadvantage as compared with other members of the Trade Union) except in relation to the control or management of the said fund) by reason of his not contributing to the said fund and contribution to the said fund shall not be made a condition for admission to the Trade Union.

Criminal Conspiracy in Trade Disputes

—No officer or member of a registered Trade Union shall be liable to punishment under sub-section (2) of section 120 B of the Indian Penal Code in respect of any agreement made between the members for the purpose of furthering any such object of the Trade Union as is specified in section 1, unless the agreement is an agreement to commit an offence

Immunity from Civil Suit in certain Cases

—(1) No suit or other legal proceeding shall be maintainable in any Civil Court against any registered Trade Union or any officer or any member thereof in respect of any act done in contemplation or furtherance of a trade dispute to which a member of the Trade Union is a party on the ground only that such act induces some other person to break a contract of employment or that it is in interference with the trade business or employment of some other person to dispose of his capital or of his labour as he wills

(2) A registered Trade Union shall not be liable in any suit or other legal proceeding in any civil court in respect of any tortious act done in contemplation or furtherance of a trade dispute by an agent of the Trade Union if it is proved that such person acted without the knowledge of or contrary to express instructions given by the executive of the Trade Union.

Proportion of Officers to be connected with the Industry—Not less than one half of the total number of the officers of every registered Trade Union shall be persons actually engaged or employed in an industry with which the Trade Union is connected.

Provided that the Local Government may by special or general order declare that the provisions of this section shall not apply to any Trade Union or class of Trade Unions specified in the order.

Returns—(1) There shall be sent annually to the Registrar on or before such date as may be prescribed a general statement audited in the prescribed manner of all receipts and expenditure of every registered Trade Union during the year ending on the 31st day of March next preceding such prescribed date and of the assets and liabilities of the Trade Union existing on such 31st day of March. This statement shall be prepared in such form and shall comprise such particulars as may be prescribed.

(2) Together with the general statement there shall be sent to the Registrar a statement showing all changes of officers made by the Trade Union during the year to which the general statement refers, together also with a copy of the rules of the Trade Union corrected up to the date of the despatch thereof to the Registrar.

(3) A copy of every alteration made in the rules of a registered Trade Union shall be sent to the Registrar within fifteen days of the making of the alteration.

WORKMEN'S COMPENSATION

The Workmen's Compensation Act of 1923 received the assent of the Governor-General on the 5th March 1923. The Act extends to the whole of British India including British Baluchistan and the Southern Parganas and came into force on the first day of July 1924. The original Bill contained two distinct parts Chapter II which lay outside the general scheme for compensation, contained provisions modifying the ordinary law in respect of employers' liability and making it easier for injured workmen to sue their employers for damages in the Civil Courts. These clauses applied only to workmen who come under the workmen's compensation provisions so that although they omitted the limit to damages which governs their counterpart in England, they were not likely to be much used. This Chapter II was deleted from the measure by the Legislative Assembly. Ten classes of workmen are covered by the Act. Some of these such as members of fire brigades telegraph and telephone linemen sewage workers and tramwaymen are small and as the definition of seamen is limited to those employed on certain inland vessels only a very small proportion of Indian seamen will benefit by the bill. The five important classes are the workers in factories mines, docks and on railways practically all of whom are included and those engaged in certain types of building work notably the construction of industrial and commercial buildings and any other buildings which run to more than one storey. The most important classes excluded altogether are agricultural workers and domestic servants. Non manual labourers getting more than Rs 800 a month are excluded except on the railways. Power is taken to include other hazardous occupations by notification from time to time. Compensation is to be given, as in the English Act for personal injury by accident arising out of and in the course of employment. It is also to be given for diseases in certain cases. The provisions for diseases have been so framed that if a certain class of workmen contracts a scheduled disease, it will usually be extremely difficult for the employer to defeat a claim for compensation. On the other hand, other workmen will find it equally

difficult to get compensation for disease as they will have to prove that the disease arises solely and directly from the employment. The diseases scheduled at present are anthrax lead poisoning and phosphorus poisoning. Whether compensation can be claimed for diseases other than those scheduled is doubtful but the list is made capable of extension. Mercury poisoning was thus added to Schedule III by notification dated 28th September 1926.

Scales—The scales for compensation are generous they are based on the unanimous recommendation of a Committee which met in June 1914 (i.e. persons not under the age of 15) and minors are distinguished throughout and compensation is subject to upper limits in every case. For death the relatives receive 30 months wages of the deceased workman subject to a maximum of Rs 2500 if he was an adult. For a minor who is killed the compensation payable is the fixed sum of Rs 200. If a workman is completely disabled for life he gets 42 months wages if he is an adult and 84 months wages if he is a minor subject in each case to a maximum of Rs 500. If he sustains permanent injuries that do not completely disable him he gets proportions of the above sums and for certain clearly recognisable injuries like the loss of limb these proportions are specific. Thus a workman who lost his right arm below the elbow would receive 80 per cent of the sums specified above subject to a maximum of Rs 2100. If his pay was Rs 30 monthly the sum would come to Rs 756. All these payments are lump sums. Of much greater importance are the provisions for the minor and more common injuries. Statistics based on experience of industry generally in other countries indicate that 50 per cent of injuries from accidents cause disablement for not more than ten days 44 per cent cause disablement lasting more than 10 days but ultimately disappearing 5 per cent result in permanent injuries and 1 per cent end fatally. A large proportion of cases will be excluded by the provision that no compensation is to be paid on account of the first ten days of disablement. The great majority of the re-

maining cases will fall under the scale for temporary disablement. The rate of payment for temporary disablement is half wages for adults and two-thirds wages for minors subject to a maximum of five years and for minors two-thirds wages or whole monthly wages after they have attained the age of 15 years subject in each case to a maximum amount of Rs 30 and to a maximum period of 5 years. This maximum of 5 years is not of great importance as experience shows that the number of such cases which last more than six months is insignificant. During the first six months of these payments they can only be commuted to a lump sum if both parties agree after payments have gone on for six months either party can apply for commutation. In its treatment of the difficult question of dependents the Indian Act follows only husbands and wives, parents and minor children to claim compensation and it makes the compensation a fixed sum independent of the number of those relations. The administration of the Act and the settlement of disputes is entrusted to special Commissioners with a very simple procedure, wide powers and restricted opportunities for appeals.

Only two Provinces have so far appointed full time Commissioners. In Bengal Mr M H B Lethbridge, J.C.B. is the Commissioner for Workmen's Compensation and in the Bombay Presidency Mr A. M. Patwardhan, Barrister at Law, has been appointed a full time Commissioner with an immediate jurisdiction extending over Bombay City, the Bombay Suburban District, the Districts of Ahmedabad, Broach, Surat, Khandesh and Sholapur and the whole of the B. & C. I. Railway line coming within the Bombay Presidency. In the Madras Presidency the Labour Commissioner is also the Commissioner for workmen's compensation. In the other Provinces and in the Districts of Bengal and Bombay which are not under the jurisdiction of the Provincial full time Commissioners, the District Magistrates and Subordinate Judges have been appointed ex-officio Commissioners.

The annual report of the working of the Act in the Bombay Presidency including Sind for the year 1926 shows that in addition to 15 applications which were pending at the beginning of the year 24 applications were filed during the year and 7 were received for disposal from other Commissioners as against two applications pending at beginning 232 filed and 3 received from other Commissioners during the year 1925. Of these 268 applications 50 related to fatal accidents, 9 to permanent disablement, 13 to temporary disablement and 101 to distribution of compensation. Five applications related to recovery of compensation under Section 31 and the remaining two were miscellaneous. All but 28 applications were disposed of during the year, the claims paid having been contested only in 102 cases. Out of the contested applications 21 were allowed in full, 54 in part and the remaining 27 were dismissed. Of the remaining applications 7 were transferred to other Commissioners for disposal, 5 were withdrawn, one was dismissed for non-appearance, two were summarily dismissed under rule 21, 124 were admitted by the opposite party and one was allowed ex parte.

During the year 1926 Rs. 1,38,259 13-6 were deposited of which Rs. 1,17,273 represented the amount of compensation deposited under Section 31 for fatal accidents and Rs. 20,986 13-6 represented the amount of compensation deposited under Section 31-2 in respect of non-fatal accidents as against Rs. 93,074-0-0 and Rs. 16,338 - - respectively during 1925. Of the total amount of Rs. 1,38,259 13-6 Rs. 1,33,245 18 were paid out to various claimants, thus leaving a balance in the hands of the Commissioner of Rs. 5,013-0-0 at the end of the year. Of the amount of Rs. 1,33,245 18 that was paid out Rs. 1,07,000-0-0 represented the amount of three deposits that were returned to the employers under Section 8(4) them being no dependants. The total number of cases in which compensation was awarded during the year amounted to 196 of which 194 were in respect of adults and 2 in respect of minors. Of these 194 cases 122 related to fatal accidents, 66 to permanent disablement and 6 to temporary disablement. Of the two cases relating to minors one was for fatal accident and the other for permanent disablement.

At the beginning of the year 1926 there were 9 applications for registration of agreements pending. In addition 13 applications were received during the year. Of these 23 applications 19 were in respect of permanent disablement and the remaining 4 for commutation of half monthly payments for temporary disablement. In all 206 agreements were registered involving a total amount of compensation of Rs. 4,499 10-5. During the year 1926 three appeals were filed in the High Court of which one was dismissed under Order XLII rule 2 clause (1) of the Civil Procedure Code. In another the order of the lower court was confirmed and the third was still pending. In a fourth case that was taken up to the High Court as the claim was below Rs. 500 there was no appeal and the party therefore chose to file a revision petition under Section 115 of the Civil Procedure Code. The High Court held that the Commissioner was not a Court within the meaning of Section 115 of the Code and therefore dismissed the petition for revision.

Proposed Labour Legislation

Largely as a result of the demands of Labour in Indian Legislatures in the past and elsewhere the Government of India have at present under consideration the problem of legislation (1) for defining the limits within which wages must be paid and (2) for the regulation of Deductions made from Wages or Payments in respect of fines.

The Prompt Payment of Wages.

In September 1924 the Government of India requested all Local Governments to furnish particulars regarding the periods by which wages are paid in organised industries and the delays which are associated with their payment. The results of the enquiry for the Bombay Presidency were published in the issue of the *Labour Gazette* for January 1925 and for all India in a special bulletin issued by the Department of Industries and Labour—Bulletin No. 34. Periods of Wage Payment. The information collected revealed a state of affairs which could not be regarded as other than unsatisfactory. The delays which

clases between the end of the period by which wages have been earned and the date on which they are paid were found to be longer than is usual in industries in other countries and in a number of cases were so great as to add appreciably to the economic difficulties of the workers.

In July 1928 the Government of India addressed all Local Governments for their views after consulting the interests concerned on the provisional proposals drawn up with regard to the form which the legislation for the control of this matter should take. It was pointed out that systematic delays in payment are particularly associated with payments on a monthly basis—a month being the period most commonly employed for the calculation of wages. It is no uncommon thing—in fact, it appears to be the rule in certain industries for monthly wages to be systematically withheld until a fortnight after the close of the month to which they relate, and cases have been reported where wages had been withheld for considerably longer periods. It was suggested to the Government of India that as the evil is particularly associated with monthly payments employers should be compelled to adopt shorter periods of wage payments. This was one of the arguments put forward in support of Diwan Chaman Lal's Weekly Payments Bill. This Bill when it was referred to Local Governments for consideration met with such general opposition that the Government of India were compelled to oppose its consideration in the Legislative Assembly. The Government of India do not think that any Bill of this kind is likely to receive the support of public opinion or to prove effective in its operation but whilst not accepting the view that the general system of monthly payments is a satisfactory one they recognise that if the abuses referred to can be checked or eliminated by legislation it is the duty of Government to introduce such legislation.

The scheme outlined proposes to set statutory limits to the time within which wages must be paid. In the case of monthly workers the limit proposed is seven days for fortnightly workers four days, for weekly workers two days and for daily workers one day. It is suggested that it should be left to the employers subject to the approval of the Local Government to fix the date on which the month should commence. The difficulties arising out of the fact that in some cases when wages are paid at piece rates intricate valuations may be required to calculate wages are proposed to be met by prescribing that in such cases the payment within the statutory limits laid down of seventy five per cent

(or some higher percentage) of the wages earned should constitute compliance with the law. It is further proposed that the measure, in the initial stages, should be confined only to such establishments as are covered by the Indian Factories Act and the Indian Mines Act, and that the enforcement of the measure should rest with the inspection staff of the Factories and the Mines Departments through some form of summary procedure.

Regulation of Deductions from Wages for Fines.

In June 1928, the Government of India requested all Local Governments to procure information on the extent of the practice in India by which employers in industrial concerns are empowered to inflict fines upon their workmen. Suggestions have been made in the Central Legislature in the Press and elsewhere that the system of inflicting fines upon workmen is common in Indian industrial establishments, and that it constitutes an evil of such proportions that steps should be taken either to abolish the system altogether or to reduce it to such dimensions as to prevent abuse.

The experience of Western countries with regard to the subject has in many cases led to more or less elaborate legislation on the subject. The main Provisions of the English Law are contained in the Truck Act of 1896. In several other countries the power to impose fines and make deductions from wages is regulated by law. Sometimes a limit in the shape of a maximum percentage of wages is imposed generally deductions can only be made in accordance with a code of regulations duly posted in the factory or other establishment and frequently the law contains the statutory provision that sums paid as fines must be credited to funds devoted in some manner or other to the benefit of the workers.

The Government of India have not at present sufficient information at their disposal regarding the degree to which the system of imposing fines is prevalent in India, the forms which it takes, or the extent if any to which it is in practice abused to enable them to form any definite conclusions. The object of the enquiry is to ask Local Governments to furnish them with such information as they are able to collect on the subject after consultation with the interests concerned and to favour them with their views on the desirability of taking any action legislative or otherwise, to counter any abuses which may be found to prevail.

WAGES

In Agriculture.—There is much discussion with no very definite conclusions as to whether wages have kept pace with the cost of living. Conditions vary so markedly between Province and Province that it is difficult to give exact figures. Different Provincial Governments publish from time to time the results of quinquennial Censuses into the wages of laborers mainly in agriculture. The Labour Office of the Government of Bombay published a Report in 1924 of an Enquiry into Wages in Agriculture which

gave the average daily earnings of three classes of agricultural labour viz. skilled labour, ordinary labour, and field labour in each of the 26 districts of the Bombay Presidency separately for urban areas and rural areas and for each of 23 years from 1900 to 1922. The figures for each year from 1923 to 1928 have been published in the General Administration Reports of the Bombay Presidency. The wages prevailing in other provinces for similar types of labour do not compare unfavourably with wages in the Bombay Pro-

agency for any particular year for which a comparison is made. This statement requires an important qualification. It is not meant that the money amounts actually paid are similar. The rates of wages in different provinces vary according to the extent of their industrialisation and money wages in Provinces which are mainly agricultural are on a lower level than the money wages in Provinces which are highly industrialised, i.e. in Bombay and Bengal. But there is no doubt whatever that wages have risen markedly in all parts of India during the last twelve years and that the general condition of the Indian labourer has improved. The construction of a real wage index number is not always indicative of the general material condition of any group of workers. The utility of such an index number is only confined to a particular comparison with any given date and provided always that the two sets of figures showing money wages and the cost of living at two particular dates are accurately compiled the real wage index number at the later date as compared with the condition of the workman at the

former date gives an accurate reading of the position of his purchasing power in comparison with that date. Indian publicists constantly aver that the condition of the Indian labourer to-day is worse than ever it was before. The true fact is that since wages and prices are both variables, real wages being a function of two variables could only remain at the same level if the two factors vary proportionately. But this does not happen and wage changes always lag behind price changes. When prices rise real wages rise only slowly to the original level and when prices fall real wages fall slowly. Consequently the labourer is sometimes better off and sometimes worse off. Comparison of conditions in India to-day with the pre-war year show that during this particular period the condition of the Indian labourer has undoubtedly improved. This is amply proved by the figures given below showing the index numbers of dully average wages of skilled labourers, ordinary labourers and field labourers, for urban areas and for rural areas for the Bombay Presidency.

Agricultural Wages (Nominal)

Index Numbers for the Bombay Presidency (Including Sind) 191 = 100

Year	Urban Areas			Rural Areas		
	Field labour	Ordinary labour	Skilled labour	Field labour	Ordinary labour	Skilled labour
1921	179	184	180	159	143	166
1922	189	192	195	170	152	179
1923	200	200	196	171	171	187
1924	195	196	205	173	171	191
1925	211	208	224	206	181	211
1926	211	204	216	194	171	215

The construction of accurate real wage figures to correspond with the index numbers of nominal wages given above is not possible on account of the inapplicability of any general cost of living index number for a particular group of workers in a particular centre to the Presidency as a whole.

In the Cotton Mill Industry—An enquiry was held by the Labour Office of the Government of Bombay into Wages and Hours of Labour in the Cotton Mill Industry for August 1923 which covered a total number of 25,119 work people in 186 mills in the Bombay Presidency and in the States within its territorial limits. The important results of this enquiry were (1) a decline in the number of children employed owing to more rigorous factory inspection under the new Factory Act (2) an absenteeism figure as high as 10.4 per cent for all work people, 9.2 per cent for men, 14.7 per cent for women, 9.8 per cent for time workers and 11.2 per cent for piece workers

(3) the average monthly earnings per head in August 1923 as compared with May 1921 were at the same level in Bombay slightly over in Ahmedabad and lower in Sholapur Baroda State and other Centres in the Presidency (4) the potential monthly earnings for all work people in the Presidency would have amounted to Rs. 3.10 per head per month had all work people worked for a full working month of 27 days at the rates of average daily earnings which prevailed in August 1923—the difference between this and the actual monthly earnings amounting to Rs. 3.40 or 12 per cent (5) the total Wages Bill in the cotton mill industry in August 1923 amounted to Rs. 7,22,000 for the number of work people covered in the enquiry (6) the average hours of labour per day amounted to 10 hours and 5 minutes for men, 9 hours and 35 minutes for women and 7 hours for half timers or children (7) the number of holidays recommended in the Bombay Mills by the Millowners Association during the year 1923 amounted to 57 and (8) except in Sholapur no bonuses were paid for service in the year 1923.

The following table shows the daily average earnings per capita of work people in different occupations classified according to age and sex-groups —

		Bombay City	Ahmedabad	Sholapur	Baroda State	Other Centres

† Children are workers boys and girls more than 12 years and under 15 years of age

The third Labour Office Enquiry into Wages in the Cotton Mill Industry in the Cities of Bombay Ahmedabad and Sholapur was held in 1923 on the basis of the Muster Roll. The results of this enquiry will be published in due course

OFFICIAL ORGANISATION

The Government of India and several Local Governments have set up special machinery for dealing with Labour issues and there are Labour officers with the Governments of Bengal, Madras and Burma whilst the Bombay Government on the advice of the Informal Committee whose recommendations have been mentioned above constituted a special Labour Office in the Secretariat.

In a resolution of Government in the Home Department dated 29th April 1921 the functions of the Labour Office in Bombay were set out as follows —

(i) **LABOUR STATISTICS AND INTELLIGENCE**—These relate to the conditions under which labour works and include information relating to the cost of living, wages, hours of labour, family budgets, strikes and lock-outs and all other matters.

(ii) **INDUSTRIAL DISPUTES**—As experience and knowledge are gained and the activities of the Labour Office develop it will promote the settlement of industrial disputes when these arise and

(iii) **LEGISLATION AND OTHER MATTERS RELATING TO LABOUR**—The Labour Office will advise Government from time to time as regards necessary new legislation or the amendment of existing laws. The Labour Office publishes a monthly journal entitled the *Labour Gazette* which is a journal for the use of all interested in obtaining prompt and accurate information on matters specially affecting labour in India and abroad. The address of the Labour Office is —SECRETARIAT BOMBAY.

Director of Information and Labour Intelligence and Registrar of Trade Unions—Mr. T. Gennings Bar at Law J. I.

Investigators—Mr. R. R. Deshpande B.A. B. Litt. (Oxford) Mr. N. A. Mehrban B.A. (also Asst. Registrar of Trade Unions) Mr. A. S. Rajan B.A. LL.B.

Joint Investigators—Mrs. K. Wagh Miss C. Phulpalkhare Miss S. Dabholkar.

LABOUR ASSOCIATIONS

ALL-INDIA TRADE UNION CONGRESS

President—Mr. C. F. Andrews

Vice Presidents—(1) Mr. Thengal

(2) Dand

(3) B. N. Mukerji

General Secretary—Mr. N. M. Joshi M.L.A. (C) Servants of India Society, Sandhurst Road, Bombay.

Organising Secretary—Mr. S. H. Jhabvala

Assistant Secretaries—(1) Mr. R. R. Bakhle

(2) S. A. Dange

Treasurer—Mr. F. J. Cinwalla 12th Esplanade, Road Fort Bombay.

CENTRAL LABOUR BOARD FOR BOMBAY

President—Rai Bahadur Chundrika Prasad

Vice President—Mr. J. Cinwalla B.A.

1-3 Esplanade Road Fort Bombay

Hon. Gen. Secretary—S. H. Jhabvala B.A. 12th Esplanade Road Fort Bombay.

The names and addresses of the officials of other trade unions in the Bombay Presidency are published regularly every quarter by the Labour Office in the *Labour Gazette*.

Domestic Servants.

The relationship of master to servant in India is a subject to which attention is frequently directed in the Press by complaints about the alleged deterioration of domestic servants and the hardships to which employers are subjected by the boycotting action of discharged servants. The remedy most commonly propounded for misbehaviour on the part of servants is registration with a view to checking the use of false testimonials, or chits, and to enabling masters to obtain certain information as to the character of the persons they employ. This mode of procedure is of German origin for the old Prussian Servants Ordinances (*Gesindeordnung*) were supplemented in 1854 by a law, applying only to agricultural labourers and domestic servants, which punishes breach of contract and since then various State laws dealing with domestic servants have been passed in Germany. The conditions are not, however, analogous for the servant keeping class in India is proportionately larger than in Europe as also is the number of servants kept by each individual.

The first attempt in the East to deal with the problem by legislation was made in Ceylon. The act dealing with the registration of domestic servants in that Colony is comprised in Ordinance No 28 of 1871. It extends to all classes of domestic servants hired by the month or receiving monthly wages and the word servant means and includes head and under servants, female servants, cooks, coachman, housekeepers and house and garden coolies. The Act came into operation in 1871 and empowered the Governor to appoint for the whole of the island or for any town or district to which the Ordinance is made applicable a registrar of domestic servants, who is to be under the general supervision and control of the Inspector General of Police. A registry is kept by the registrar of all domestic servants employed within his town or district and he has to enter therein the names of all the servants the capacities in which they are employed at the time of such registration, the dates of their several engagements and such memorandum of their previous services or antecedents as they may desire to have recorded in the register. But the registrar must, previous to his entering all these details, satisfy himself as to the credibility of the statements made to him. Any person, who may not have been a domestic servant before but who is desirous of entering domestic service, has to submit an application to the registrar, and if the registrar is satisfied that there are reasonable grounds to believe that the applicant is a fit and proper person to enter domestic service he shall enter his name in the register recording what he has been able to learn respecting the person's antecedents together with the names of any persons who are willing to certify as to his respectability. If the applicant is unable to produce satisfactory or sufficient evidence as to his fitness for domestic service the registrar may grant him "provisional" registration, to be thereafter converted into "confirmed" registration according to the result of his subsequent service. If the registrar is satisfied that the applicant is not a fit and proper person he should withhold registration altogether but in such a case he must report his refusal to register to the Inspector-General of Police.

Every person whose name has been registered in the general registry is given a pocket register containing the full particulars of the record made in the general registry. No person can engage a servant who fails to produce his pocket register or whose pocket register does not record the termination of his last previous service if any. On engaging a servant the master has to enter forthwith in the pocket register the date and capacity in which such servant is engaged and cause the servant to attend personally at the registrar's office to have such entry inserted in the general registry. Similarly in case the master discharges a servant he must insert in the pocket register the date and cause of his discharge and the character of the servant. Provided that if for any reason he be unwilling to give the servant a character or to state the cause of his discharge he may decline to do so. But in such a case he must furnish to the registrar in writing his reasons for so refusing. If the servant on dismissal fails to produce his pocket register the master must notify that fact to the registrar. Whenever any fresh entry is made in the pocket register the servant is bound to attend the registrar's office to have such an entry recorded in the general registry. Every servant whose name is registered shall if he subsequently enters service in any place not under the operation of the Ordinance attend personally at the nearest police station on his entering or leaving such service and produce his pocket register to the principal officer of police at such station in order to enable the police officer to record the commencement or termination of the service. The police officer has then to communicate it to the registrar of the town or district in which such servant was originally registered.

Various penalties of fine as well as of imprisonment are imposed for violation of any of the acts required to be done or duties imposed by the Act on the various persons mentioned below. As respects masters if they fail to fulfil any of the duties imposed on them by the Act they expose themselves to a liability of their being fined to the extent of Rs 20. Similarly a servant who fails to fulfil any of the duties imposed on him by the Act is liable to pay a fine not exceeding Rs 20. But in case he gives any false information to the registrar or to any other person on matters in which he is required by this Ordinance to give information he is liable to a fine not exceeding Rs 50 or to imprisonment with or without hard labour not exceeding 3 months. A fee of 25 cents is charged to the master on engaging a new servant, a like fee of 25 cents is charged to the servant on his provisional registration or on registration being confirmed or for registration of previous service or antecedents. But in case of loss or destruction of the pocket register the servant has to pay one rupee for the issue of a duplicate pocket register.

A similar Ordinance (No 17 of 1914) has been introduced in the Straits Settlements, where its operation has been limited to such local areas as may be declared by the Governor in Council and its application within such areas has been restricted to the class of householders who are expected to desire the benefit of the provisions

Routes between India and Europe.

The Indian port for the direct journey to and from Europe is Bombay. There are ordinarily five lines of steamers by which the journey to and from the West *via* Bombay can be performed, either by sea all the way or—and in some cases only—by sea part of the way and by rail across Europe. They are the P & O the Anchor Line the City and Hall Line the Lloyd Triestino and the British India line. The Natal line steamers are available for Western passages only the steamers sailing round the Cape on their Eastward voyages. There are ordinarily other services between Calcutta and

the West, by steamers sailing round Ceylon and several lines connect Colombo with Europe. Of the latter the Orient, the Messageries Maritimes the Bibby Lines N Y K Australian Commonwealth and Royal Dutch Lines are the chief besides the P & O. The Bibby and Henderson services extend to Rangoon. The new railway between India and Ceylon greatly increases the importance of the Colombo route for Southern India. The shortest time between London and Bombay is 15 days *via* Marseilles. The following are the fares which are convertible at approximately current rates of exchange —

THE SUEZ CANAL

At the General Meeting of the Suez Canal Company held in Paris in 1927 the Chairman said that in consequence of the exceptional circumstances benefiting the early part of 1927 operations for the corresponding period of 1926 did not show equally good returns. Fortunately however during the remainder of the past 12 months traffic was such that in the aggregate 1926 was able to show a diminution of only some 587,000 gold francs on 1925 figures. On the other hand owing to the sterling rate being on the average about 10 per cent higher in 1926 than during the previous year receipts during the last 12 months when converted into francs gave a figure much greater than that for 1925—namely 748,547,406fr (increase of 337,869,950fr on 1925 figures). Expenditure showed an increase of 646,844fr being 69,727,176fr in all. This increase was derived in the main from the enlarged expenses in France due to the depreciation of the franc. Work in the canal demanded an increase of about 2,000,000fr.

Increase in Dividend.—Taking these amounts into account and after earmarking 49,000,000fr for amortization funds with the sum carried forward from 1925 there was a disposable balance of 619,810,035fr. Of this sum it was proposed to allocate 508,892,394fr for dividend distribution whereby a dividend of 544,017fr (420fr net) would be paid to shareholders against 300fr net the preceding year. Whilst proposing this substantial increase in dividends they wished to act with all moderation and necessary prudence they could hope that the long looked for stabilization of the exchange had actually arrived. If that should be so they were firmly convinced that the extraordinary reserve the constitution of which the shareholders approved during the past years would enable them to avoid any decrease of revenue on the shares up to the time when the progress of the traffic would take that upward trend which characterized it before the war.

Traffic Figures.—As to general traffic in 1926 there were 4,970 passages through the Canal representing a net tonnage of 26,060,377 tons or a falling off of 701,553 tons on figures for the preceding year and an increase of 950,485 tons up 1924 passages. Traffic in ballast amounted to 2,029,618 tons net being 7.5 per cent. of the total traffic against 9.6 per cent in 1925. Although British owned steamers still had the list their tonnage has fallen to 1,047,401 tons. Still this represents 7.4 per cent of the total. As was the case in the previous war countries next in order are the Netherlands, Germany and France. Traffic in Port Said of vessels not passing through the Canal amounted to 1,402,000 tons.

There was a diminution of 1,160,000 tons as regards goods carried through the Canal, the decrease only affecting return cargoes. The effect of the English strike was shown by the passage of 200,000 tons of coal from Bengal, Southern Africa, Australia, and Japan. 600,000 tons of rubber were carried. Having regard to the general return to normal currency conditions in Europe the future outlook was promising.

Record traffic in 1927.—A steady improvement in Suez Canal traffic and revenue returns was noticeable during the first six months of 1927 and a new record was set for tonnage and receipts. The total number of commercial transits through the canal was 2,774 on which tolls of 103,228,000 gold francs were paid as compared with 2,409 vessels and tolls amounting to 93,560,000 gold francs during the corresponding period of 1926.

Movement of Shipping.—In the 1927 period 14,502,000 tons of shipping passed through the canal of which 7,082,000 tons were northbound and 6,834,000 tons southbound whereas in the first half of 1926 the transiting tonnage totalled 13,050,000 of which 7,041,000 tons went northward and 6,014,000 tons southward.

The Suez Canal

513

Mail carriers through the canal exceeded 4,500 000 tons, and this total was more than that of any preceding six month period ever recorded in the history of the Suez Canal. The increase was chiefly in German mail services (147 000 tons) of which 78 000 tons was recorded for the Hamburg America Line and 68 000 tons for the Norddeutscher Lloyd. There was also an increase of 94 000 tons in British mail vessel traffic, 84 000 tons in Italian and 62 000 tons in Dutch.

Shipping of all of the principal maritime nations which participated in the traffic of the canal showed increases when compared with the corresponding period of 1926. That of British registry comprised a larger share of the whole than that of all other nations combined and kept its usual rank in the canal traffic with 57.1 per cent of the total traffic, as against 55.7 per cent during the 1926 period followed by vessels of Dutch, German, French, Italian, Japanese, United States and Norwegian registry in the order named.

Traffic through the Suez Canal by nationality during January-June

Nationality	1926		1927	
	Number of transits	Net tonnage	Number of transits	Net tonnage
British	1 880	7 525 000	1 530	8 277 000
Dutch	272	1 421 000	285	1 501 000
German	305	1 061 000	248	1 293 000
French	169	4 516 000	198	841 000
Italian	177	1 09 000	180	797 000
Japanese	78	468 000	71	471 000
American	66	34 000	59	369 000
Norwegian	63	80 000	70	350 000
Danish	37	159 000	39	163 000
Greek	17	48 000	27	81 000
All others	54	27 000	81	310 000
Total	2 609	13 000 000	2 774	14 500 000

Improvement Schemes.—It was announced in 1914 that from and after January 1st 1915 the maximum draught of water allowed to ships going through the Suez Canal would be increased by 1 ft., making it 30 ft English.

The maximum permissible draught of ships using the Canal was 24 4 feet in 1870. In 1890 ships drawing 25 4 feet could make the passage and during the following 24 years the increase has been at the average rate of about 1 foot every six years thus bringing the maximum draught authorized to 29 feet.

The scheme of improvement adopted by the Company on the recommendation of the International Consultative Committee of Works the British representatives on which are Sir William Matthews and Mr Anthony Lister is a comprehensive one and the details suggest that it will meet the needs of the big ship.

A 40 feet Channel.—The declared policy of the Canal Company in regard to the deepening of the Canal is to offer a slightly greater depth of water than that available in ports east of Suez. It is claimed that, with the exception of Sydney there is no eastern port which at low tide has a greater depth of water than that now provided in the Canal throughout the full length of nearly 105 miles in any case the work in hand should meet the needs of any ship likely to be built for the eastern trade during the next few years.

When the Canal was opened in 1869 the width was 72 feet and the depth about 26 feet 2 inches. In June, 1918, the width at a depth of 32 feet 8 inches had been increased to a minimum of

147 feet 6 inches over a length of about 85 miles and to a width of 328 feet over a distance of about 20 miles. The latest scheme makes provision for a depth of 40 feet throughout and for a widening up to 196 feet 8 inches in the south section and the cutting of an appropriate number of siddings in the north and central sections where a minimum width of 147 feet 6 inches is believed to be sufficient for the requirements of the immediate future.

The work of enlarging the capacity of the Canal presents no special difficulty on the engineering side. A good deal of sand is occasionally driven into the channel at Port Said during storms, but a remedy for this will be found in extension of the west breakwater by about 2 700 yards at a cost of over \$2 000 000. The construction of this extension, which has been in hand for the past two years, is making satisfactory progress. The Suez Roads are being adequately dredged in accordance with an agreement between the Egyptian Government and the Company.

Almost up to the end of 1915 the works for extending the jetty to the west of Port Said works of capital importance for the protection of the entry to the Canal, were pushed on uninterruptedly. In November however, for want of hydraulic lime, the manufacture of artificial rocks for this jetty was interrupted. The submarine foundations in stone and rubble of the new jetty were as a matter of fact completed to a length of 2,500 metres. The protective blocks were laid for 1 040 metres and cemented for over 800 metres. The protection of the Channel is thus secured and there is no need for any apprehension as to its future.

Travel in India

Thirty years ago a tour in India was possible only to the wealthy the leisured and those who had friends in the country. The cost of the journey was very high the methods of transportation were very slow and the facilities for travel were so indifferent that he was a bold man who consigned himself to the morose of the country without a chest of letters of introduction. Now the mail which is posted in London on Thursday night reaches Bombay in 14 days, and the passenger can travel by the same route and with the same speed as the mail. A dozen lines have covered the sea route between Europe and India and Ceylon with a plethora of regular services. The Indian Railways provide facilities on the trunk lines unsurpassed by the *trains-de-lux* of Europe and the Indian hotel has grown into a really comfortable caravan serai.

In the touring season which extends from November to March, there is the attraction of a perfect climate. It is never very hot in the North indeed it is really cool, it is always fine and fresh and bracing. If there is one country in the world to which that elusive term applies here we have it at the season when the tourist arrives the real Indian summer. Then there is its infinite variety. India is in no sense a nation and never will be. Its peoples are wide as the Poles as under each has its own art its own architecture, its own customs and its own civilisation. A certain superficial resemblance runs through each, beneath lies a never-ending variety which age cannot wither nor custom stale.

The Grand Tour—I come coming to India for the first time so often ask—Where shall I go? Well, wherever else the tourist may go whatever else he should leave out he should omit nothing on the Grand Tour. It is the foolish custom nowadays to sneer at those who follow the beaten tracks but the visitor who shuns any part of the orthodox journey across India misses what nothing else can repay. Bombay is by far the most convenient point of departure, for here the world and steamers wait, here is one of the finest cities in the British Empire, and here the traveller can best complete his outfit and arrangements. From Bombay stretch northwards the two great trunk lines of India. One the Bombay Baroda & Central India Railway leads through the pleasant garden of Gujarat to Ahmedabad

the ancient Moslem capital of the Province containing fine examples of Mahomedan and Jain architecture thence to Abu for the famous Jain temples of Dilwara, and on to Ajmere Jaipur and Agra. The other by the Great Indian Peninsula Railway carries the tourist over the Western Ghats by a superb mountain railway to Gwalior whose rock fortress rises like a giant battlement from the plain and so on to Agra. Of the glories of the Taj Mahal, Agra Fort and the deserted city of Fatehpur Sikri it were supererogatory to speak. Another easy stage leads to Delhi that amazing collection of cities dominated by the little Ridge where British valour kept the mutinous hordes at bay and finally drove them from the city by a feat of arms unsurpassed in history. Then from Delhi the East Indian line leads comfortably to Benares Lucknow and Calcutta with the opportunity of an excursion to Cawnpore if the spirit moves. The great charm of the Grand Tour is that it reveals the best that India can show. This route has the additional advantage that it fits in with any dignified which the time and purse of the traveller may permit. No one who can spare the time should fail to push northwards from Delhi to Peshawar, where the flower of the army keeps watch and ward over the Khyber, and up the dread Pass to the eyrie where the fort of Ali Masjid bars the way to all invaders. Calcutta is the best starting point for bartering though unfortunately the magnificent mountain panorama visible from there is often obscured at this season by mists. Then from Calcutta two other natives open. A fine service of mail steamers leads to Burma and one of the unforgettable memories of the East is a voyage down the Irrawaddy from Bhamo or Mandalay to Prome. Again either direct from Calcutta or via Burma is an easy route to Madras and by way of Madras and Trichinopoly, with their peerless Hindu temples, back to Bombay, or on through Tuticorin to Colombo. But indeed the possibilities of expanding this tour are endless. Bombay is the best centre for the rock temples of Elephanta Kenilworth Karli Ellora and Ajanta. Calcutta is only a short distance from Puri the one Indian temple where there is no caste, and perhaps the most remarkable Hindu temple in the country. From Calcutta also start the river steamers which thread the steamy plains of Bengal and run to the tea gardens of Assam.

SPECIMEN TOURS

A number of specimen tours in India are given below. They are taken from one of Messrs. Thomas, Cook & Sons Ltd.'s publications from which firm further information may be obtained. The traveller will also find he can obtain assistance from the principal Shipping Agents and Railway Companies, or from Messrs. Cox & Co., Messrs. Grindlay & Co. and Lloyds Bank.

	1st Class.	2nd Class Rail, 1st Class Steamer
FROM BOMBAY TO CALCUTTA		
<i>Via the North-West Provinces to Calcutta (including side trip from Calcutta to Darjeeling)</i>		
TOUR 1 —From Bombay per B. B. & C. I. Railway via Ahmedabad, Abu Road (for Mount Abu), Ajmer Jaipur, Delhi, Agra, Cawnpore, Lucknow and Benares to Calcutta, thence to Darjeeling, and back to Calcutta.	Rs. 8	Rs. 4

	1st Class.	2nd Class Rail, 1st Class Steamer
FROM BOMBAY TO CALCUTTA— <i>contd</i>		
TOUR II—From Bombay per G I P Railway via Itarsi Gwalior Agra, Delhi Tundia Junction Cawnpore Lucknow and Benares to Calcutta thence to Darjeeling and back to Calcutta	Rs. a. 240 14	Rs. a. 190 13
FROM BOMBAY TO COLOMBO		
<i>Via the North West Provinces Calcutta and Southern India to Colombo (including side trip from Calcutta to Darjeeling)</i>		
TOUR III—From Bombay as in Tour No. I (via B B & C I Ry., Jaipur and the North West Provinces) to Calcutta side trip to Darjeeling and back to Calcutta thence via Khurda Road for Puri (Jugganath) Madras Tanjore, Trichinopoly Madras, Dautshkodi and Talaimannar to Colombo	425 13	224 2
TOUR IV—From Bombay as in Tour No. II (via G I P Ry., Itarsi Agra and the North West Provinces) to Calcutta side trip to Darjeeling and back to Calcutta thence as in Tour No. III to Colombo (via Southern India)	423 3	222 12
<i>Via the North West Provinces Calcutta (including Darjeeling), Burma and Southern India</i>		
TOUR V—From Bombay as in Tour No. I (via B B & C I Ry., Jaipur and the North West Provinces) to Calcutta side trip to Darjeeling and back to Calcutta thence British India Steamer to Rangoon Rail to Mandalay Irrawaddy Steamer to Prome Rail to Rangoon, British India Steamer to Madras, Rail via Tanjore Trichinopoly Madras to Dautshkodi Steamer to Talaimannar and Rail to Colombo	618 4	430 13
TOUR VI—From Bombay as in Tour No. II (via G I P Ry. Itarsi Agra and the North West Provinces) to Calcutta thence as in Tour No. V to Colombo	630 11	438 7
FROM BOMBAY TO RANGOON		
<i>Via the North West Provinces and Calcutta to Rangoon (including a tour in Burma also including a side trip from Calcutta to Darjeeling)</i>		
TOUR VII—From Bombay as in Tour No. I (via B B & C I Ry. Jaipur and the North West Provinces) to Calcutta side trip to Darjeeling and back to Calcutta thence British India Steamer to Rangoon. Rail to Mandalay Irrawaddy Steamer to Prome Rail to Rangoon	454 11	296 7
TOUR VIII—From Bombay as in Tour II (via G I P Ry. Itarsi Agra and the North West Provinces) to Calcutta side trip to Darjeeling and back to Calcutta thence British India Steamer to Rangoon. Rail to Mandalay, Irrawaddy, Steamer to Prome, Rail to Rangoon	452 3	296 0
FROM CALCUTTA TO BOMBAY		
<i>Via the North West Provinces</i>		
TOUR IX—From Calcutta via Benares, Lucknow Cawnpore, Tundia Agra, Delhi, Rewari, Jaipur, Ajmer (for Udaipur) Abu Road (for Mt Abu) Ahmedabad and Baroda to Bombay	150 12	79 15
TOUR X—From Calcutta via Benares Moghal Seral Cawnpore Tundia, Agra, Delhi Rewari Jaipur Ajmer (for Udaipur) Abu Road (for Mt Abu) Ahmedabad and Baroda to Bombay	157 13	78 16
TOUR XI—From Calcutta via Benares Moghal Seral Cawnpore Tundia, Agra, Gwalior and Itarsi to Bombay	139 7	69 12
TOUR XII—From Calcutta via Benares Moghal Seral, Cawnpore Delhi Muttra, Agra, Gwalior and Itarsi to Bombay	153 8	77 11

	1st Class.	2nd Class Rail 1st Class Steamer
CIRCULAR TOUR FROM CALCUTTA.		
TOUR XIII —From Calcutta via Benares, Lucknow, Cawnpore, Tundla, Agra, Bandikui Jaipur, Delhi and Allahabad to Calcutta	Rs 2 178 10	Rs 2 87 15
<i>Extensions Via Southern India to Colombo</i>		
TOUR XIV —From Bombay via Poona, Hyderabad, Wadi, Raichur, Madras, Tanjore, Trichinopoly, Madurai, Danushkodi and Talai Mannar to Colombo	173 5	87 5
TOUR XV —From Bombay via Poona, Hyderabad, Wadi, Guntakal, Bangalore, Brode, Trichinopoly, Madurai, Danushkodi, and Talai Mannar to Colombo	167 8	84 7
<i>Extensions to above Tours</i>		
From Ajmer to Udaipur and return	46 4	28 2
From Abu Road to Mount Abu and return one seat in motor (This excursion is strongly recommended the scenery being very beautiful)	22 0	
From Delhi to Lahore and return via Umballa and Amritsar	41 13	20 15
From Delhi via Bhatinda, Ferozepore to Lahore returning via Amritsar, Umballa to Delhi	41 13	20 15
From Calcutta to Darjeeling and return	42 12	61 4
From Colombo to Kandy and return	12 3	7 10
From Kurda Road to Puri (Jagannath) and return	12	3 14

(All fares subject to change without previous notice)

The New Capital.

The transfer of the capital of India from Calcutta to Delhi was announced at the Delhi Durbar on December 12 1911. It had long been recognised as necessary in the interests of the whole of India, to de-provincialise the Government of India, but this ideal was unattainable as long as the Government of India was located in one Province, and in the capital of that Province—the seat of the Bengal Government—for several months in every year. It was also desirable to free the Bengal Government from the close proximity of the Government of India which had been to the constant disadvantage of that Province. To achieve these two objects the removal of the capital from Calcutta was essential. Its disadvantages had been recognised as long ago as 1869 when Sir Henry Maine advocated the change. Various places had been discussed as possible capitals but Delhi was by common consent the best of them all. Its central position and situation as a railway junction added to its historical associations told in its favour and, as Lord Crewe said in his despatch on the subject to the Viceroy of India for whom the legends and records of the past are charged with so intense a meaning, this resumption by the Paramount Power of the seat of venerable Empires should at once enforce the continuity and promise the permanency of British sovereign rule over the length and breadth of the country.

The foundation stone of the new capital were laid by the King Emperor on December 16 1911 the finally selected site being on the eastern slopes of the hills to the south of Delhi on the fringe of the tract occupied by the Delhi of the past. The land chosen is free from liability to flood has a natural drainage and is not manured. It is not encumbered with monuments and tombs needing reverent treatment and the site is near the present centre of the town of Delhi. A Committee consisting of Surgeon General Sir C. P. Lucas, Mr. H. T. Keeling, C.B.I., and Major J. C. Robertson, I.M.S., was appointed to consider the comparative healthiness of the site and of an alternative one to the North of the existing city. Their report, dated 4th March 1913, states that the Committee after giving full consideration to the various points discussed in the above note is bound to advise the Government of India that no doubt can exist as to the superior healthiness of the southern site, the medical and sanitary advantages of which are overwhelming when compared with those of the northern site.

The Town Plan and Architecture.—A report by a Town Planning Committee, with a plan of the lay-out, was dated 20th March, 1913. Work was begun in accordance with it and its main lines have been followed throughout. The central point of interest in the lay-out which gives the motif of the whole is Govern-

ment House, and two large blocks of Secretariats. This Government centre has been given a position at Raisina hill near the centre of the new city. Sir Edwin Lutyens is the architect for Government House and Mr. Edward Baker for the Secretariats. The former building will cost approximately Rs. 140 lakhs and the latter groups some Rs. 124 lakhs. To the east of the forum and below it will be a spacious forecourt defined by trees and linked on to the great main avenue or parkway which leads to Indrapat. A road this main axis will run an avenue to the railway station. Other roads run in different directions from the entrance to the forum. The axis running north-east towards the Jama Masjid will form the principal business approach to the present city. At the railway station a place will be laid out around which will be grouped the administrative and municipal offices, the banks, the shops and the hotels. The main roads or avenues range from 76 feet to 100 feet in width with the exception of the main avenue east of the Secretariat buildings where a parkway width of 1175 feet has been allowed. The principal avenues in addition to the main avenues are those running at right angles to the main east to west axis.

For a temporary capital for the use of the Government of India during the period of the building of the new capital an area was selected along the Alipur Road between the existing civil station of Delhi and the Ridge. The architecture and method of construction are similar to those adopted in the exhibition buildings at Allahabad in 1914 but the buildings will outlast the transitional period for which they are intended. They will subsequently be an asset of some value.

In October 1912 by proclamation, there was constituted an administrative enclave of Delhi under a Chief Commissioner. This enclave was entirely taken from the Delhi district of the Punjab and its total area is 578 square miles. On the basis of the Census of 1911 the population of the area originally included in the Province was 3,98,269 and of the new area 14,652, or a total of 4,12,921. The population of the Municipal town of Delhi was 2,39,144. The plans of the New Capital allow for a population within it of 70,000. Its present population is approximately 40,000. Sites have been allotted for forty Ruling Princes and Chiefs to build houses for their own occupation during their visits to the New City.

There was as regards architecture a prolonged battle of the styles over Delhi. Finally to use the language of the architect, it has been their aim "to express within the limit of the medium and of the powers of its users the ideal and the fact of British rule in India, of which the New Delhi must ever be the monument. The inspiration of the designs is manifestly Western, as is that of British rule, but they combine with it distinctive Indian

features without doing violence to the principles of structural fitness and artistic unity.

Cost of the Scheme.—It was at first tentatively estimated that the cost of the new capital would be four million sterling and that sum was given in the original despatch of the Government of India on the subject. Various factors have since then increased the cost, the chief of these being the immense rise in prices since the war and the Legislative Assembly were informed by Government on 28th March 1921, that the revised estimate then amounted to 1,307 lakhs of rupees. This amount includes allowances for building new Legislative Chambers and Hostels for Members of the Indian Legislature, which were not allowed for in the earlier estimates. The New Capital Enquiry Committee in its report published in January 1923 estimated the total expenditure at Rs 129 lakhs including Rs 42 lakhs for loss by Exchange. This figure still stands. Actual expenditure up to January 1924 the latest date for which figures have been published was Rs 1.43 lakhs of which Rs 1,89,12,000 was spent upon the Secretariat.

The Project Estimate contains certain items such as land, residences, water supply, electric light and power and irrigation on which recoveries in the form of rate or taxes will in addition to meeting current expenditure partially at any rate cover the interest on the capital outlay whilst there are other items on which some return on account of the sale of leases, general taxes and indirect receipts may be expected.

Progress of the work.—The construction of New Delhi has made satisfactory progress having regard to the curtailment of the Budget allotment in consequence of the war and the return of officers and other establishments to their civil work made possible a considerable speeding up of constructional operations provided money can be provided to pay for them. The Secretariats were so far advanced that there were transferred to them from Calcutta in October 1924 the offices of the Accountant-General, Central Revenues and the headquarters of the Royal Air Force in India were also housed in them in the winters of 1924-25 and 1925-26. The residential buildings for Government officers and staff of various grades nearly then completed. The whole of the civil side of Government moved for some years in old Delhi entered into their quarters in the new Secretariat on coming down from Simla in November 1923. The present position is that all Government Departments including the Army Department and R.A.F. Headquarters have their offices in the new civil buildings on which the builders are completing the final details but that Army Headquarters continues in the old Temporary Secretariat in Old Delhi. The Members of H. F. the Viceroy's Executive Council except H. E. the Commander-in-Chief live in their new official residences in the new capital. H. E. the Viceroy is expected to take up his residence in the new Government House there in the winter of 1929. His Excellency for the present resides at Viceregal Lodge in Old Delhi. The Commander-in-Chief continues at his old residence Flagstaff House Old Delhi, and will similarly transfer to New

Delhi at the end of 1929. The Government have recently devoted special consideration to the question whether their ordinary annual 3 months residence in Delhi should be extended each year to 7 months but up to the end of 1927 had announced no decision.

Art Decorations.—The Government of India in 1927 approved a scheme for the encouragement of Indian artists by providing facilities for the decoration of certain buildings in New Delhi. The outlines of the scheme are briefly as follows. A certain number of domes and ceilings in the New Secretariat Buildings at Delhi suitable for decoration will be selected. The various schools of art in India as well as individual artists have been invited through local Governments to send in by the beginning of March 1928 small scale designs for approval by a Committee. After approval by the Committee both as regards the design and colour the pictures will be drawn out and painted to full size on canvas and if finally approved by the Committee will be fixed according to the Maroullan process or any other techniques such as fresco or tempera are optional. Artists or schools of art who may send in small scale drawings have to bear the initial expense of preparing them. If these are approved by the Committee the out-of-pocket expenses will be paid in addition to a suitable honorarium. Government undertake to pay for the finished pictures done from approved sketches but do not guarantee that the finished paintings will permanently be preserved. The Committee will consist of Sir John Marshall K.C.I.E. Director General of Archaeology in India as Chairman and one or more experts to be nominated by him as members. Government have intimated that historical or allegorical subjects will be given preference over religious ones.

Opinion of the Legislature.—Considerable discussion regarding the new works took place in the Assembly in 1921. The following unofficial resolution was carried—

This Assembly recommends to the Governor General in Council that in the interests of economy and of general convenience alike the execution of the programme of New Delhi works may be expedited and the necessary funds provided or raised so that the Secretariat and Legislative buildings and connected works including residences may be completed as early as practicable.

A non-official Member in the Legislative Assembly on 28th September 1921 at Simla, moved a recommendation to Government to appoint a Committee to inquire into the possibility of establishing a permanent Capital of India in a place possessing salubrious and temperate climate throughout the year. This proposal was ridiculed by several of his non-official colleagues and was eventually rejected without a division.

H.R.H. the Duke of Connaught, on 12th February 1921 laid the foundation stone of a large group of parliamentary buildings on a site close to the south east of the Secretariat. The building is an imposing pile circular in shape consisting in the main of three horse shoe-shaped Chambers for the Chamber of

Princes, Council of State and Legislative Assembly respectively and surmounted by a large dome over a Central Library connecting all three Chambers.

H E the Viceroy (Baron Irwin) proceeded in state to the new Legislative buildings henceforward to be known as the Council Buildings and formally declared them open on 18th February 1927. The India Legislature began its sessions in them next day.

All India War Memorial.—H R H the Duke of Connaught on 19th February 1921 laid the foundation stones of an All India War Memorial at the southern end of the Central Vista. The place chosen is a fine position in the centre of the circular Princes' Park and the construction of the building is well forward but for economy's sake is being proceeded with comparatively slowly.

The Memorial will take the form of a triumphal arch spanning Kingway, the avenue running down the centre of the Vista. It will generally be similar to the Arc de Triomphe in Paris but will be simpler in a way which will probably increase its grandeur and dignity. The monument will reach a height of 160 feet and the inner height of the arch will be 87 feet 6 inches and its breadth 70 feet. Over the arch on both fronts will appear in capital letters the single word INDIA and this will be flanked on each side by the initials MCM (i.e. 1900) whilst immediately below them on the left hand will be the initials XIV (i.e. 14) and on the opposite side the figures XIX (i.e. 19). Above the Arch will be a circular stone bowl 11½ feet in diameter. This is intended to be filled with burning oil on great anniversaries and other occasions so that there will be a shining fire by night and a column of smoke by day. The memorial is solely Indian in purpose and will bear the names of Indian regiments only.

Educational Institutions.—It was proposed during 1914 that a higher college for Chiefs should be established at Delhi and in this connexion a conference of Chiefs and Political Officers was held at Delhi at which the Viceroy presided. The proposal is still under consideration. To implement it would require a capital outlay of Rs. 12½ lakhs.

The Government of India further in the Spring session of their Legislature in 1922 introduced and carried a Bill for the establishment of a unitary teaching and residential university of Delhi the buildings for which would be erected in the new capital. The plan was to provide a local university on the model recommended for Dacca University by the Calcutta University Commission. The provision of funds for the complete realisation of the university must be a matter of time and it was therefore decided to commence work with the existing colleges in their present buildings and to permit them gradually to modify their organisation. The initial work of organisation was quickly effected by the Executive Council. Unfortunately the inability of the Government of India to allot considerable funds was a severe handicap. It was hoped that H R H the Viceroy would be able to lay the foundation stone of the university buildings in November 1922 but this proved impracticable. The site for the new buildings in general has not yet been settled. Government and the University Authorities are examining the point in consultation particularly with reference to the question whether to build in the new capital or in other buildings that may become available elsewhere. The general question of the finances of the University was in 1927 the subject of inquiry by a special Committee appointed by Government. The report is with Government but up to the end of 1927 had not been published. For the present the University is housed in the temporary buildings in old Delhi occupied by the Civil Secretariat until last year.

Freemasonry in India

In 1728 a dispensation was granted by the Grand Lodge of England to Geo. Pomfret Esq., authorising him to open a new Lodge in Bengal. Of this personage nothing further is known but under Capt. Farwiter who in the following year succeeded him as Provincial Grand Master of India, Lodge was established in 1736 which in the Engraved List is distinguished by the arms of the East India Company and is described as "No. 72 at Bengal in the East Indies." The next Provincial Grand Masters were James Dawson and Zech. Gee, who held office in 1740 after whom came the Hon. Roger Drake appointed 10th April 1755. The last named was Governor of Calcutta at the time of the attack made on the settlement by Surajah Dowlah in 1756. Drake missed the horrors of the Black Hole by escaping and was accused of deserting his post, but though present at the retaking of Calcutta by Admiral Watson and Clive it is improbable that he resumed the duties of his masonic office after the calamity that befell the settlement.

The minutes of the Grand Lodge inform us that William Macketh, Provincial Grand Master of Calcutta was present at the meeting of that body November 17th 1760 and we learn on the same authority that at the request of the Lodges in the East Indies "Mr. Cullin Smith was appointed P. G. M. in 1762. At this period it was the custom in Bengal to elect the Provincial Grand Master annually by the majority of the votes of the members present from amongst those who passed through the different offices of the (Prov.) Grand Lodge and who had served as Dep. Prov. Grand Master. This annual election as soon as notified to the Grand Lodge of England was confirmed by the Grand Master without its being thought an infringement of his prerogative. In accordance with this practice, Samuel Middleton was elected (P. G. M.) in 1767 but in passing it may be briefly observed that a few years previously a kind of roving commission was granted by Earl Ferrers in 1762 to John Bluvitt, Commander of the Ajmiral Watson Indianman for East India where no other Provincial Lodge is to be found. Middleton's election was confirmed October 31st 1768 and, as the dispensation forwarded by the Grand Secretary was looked upon as abrogating the practice of annual elections, he accordingly held the office of D. G. M. Unfortunately the records of the P. G. L. date back only to 1774 and thus much valuable information is lost to us. This Grand Lodge continued working until 1792 when it ceased to meet. It seems that the officers were selected from only two Lodges much to the dissatisfaction of the other Lodges, and resulted in most of the dissatisfied bodies seceding and attaching themselves to the Athol of Ancient Grand Lodge. In 1813 at the Union both the Ancients and Moderns in Calcutta combined and gave their allegiance to the United Grand Lodge of England and have since been working peacefully under the Provincial Grand Lodge of Bengal which was revived in that year and in 1840 created a District Grand Lodge.

Madras.—The earliest Lodge in Southern India (No. 222) was established in Madras in 1762. Three others were also established about 1766.

In the same year (Capt. Edmund Pascal was appointed P. G. M. for Madras and its Dependence, and in the following year another Lodge was established at Fort St. George. In 1768 the Athol (or Ancients) invaded this District and in 1782 established a Provincial Grand Lodge and both these Provincial Grand Bodies continued working peacefully side by side until the union. Indeed though not generally known these two Grand Bodies made an attempt at coalition long before any such movement was made by their parent bodies the Grand Lodge of England and the Ancient Grand Lodge and Malden in his History of Freemasonry in Madras states that in a great measure they succeeded. At the Union in 1813 all the bodies in Madras gave their allegiance to the United Grand Lodge. One event worthy of note was the initiation in 1776 at Trichinopoly of the eldest son of the Nawab of Arcot, Undat-ul-Amari, who in his reply to the congratulations of the Grand Lodge of England stated "he considered the title of English Mason as one of the most honourable that he possessed." This document is now stored in the archives of the United Grand Lodge.

Bombay.—Two Lodges were established in this Presidency during the 17th century Nos. 234 at Bombay in 1758 and 569 in Surat in 1798 both of which were carried on the lists until the union when they disappeared. A Provincial Grand Master James Todd was appointed but there is no record that he exercised his functions and his name drops out of the Freemasons' Calendar in 1799. In 1801 an Athol Warrant was granted (No. 322) to the 74th foot which was engaged in the Maratha War under Sir Arthur Wellesley. In 1818 Lord Moria was asked to constitute a Lodge to be known by the name of St. Andrew by eight Masons residing there and also to grant a dispensation for holding a Provincial Grand Lodge for the purpose of making the Hon. Mountstuart a Mason, he having expressed a wish to that effect. The Petitioners further requested "that his name might be inserted in the body of the warrant authorising them to install him after being duly passed and raised a Deputy Grand Master of the Degree." Of the reply to this application no copy has been preserved. Lodge Benevolence was established in Bombay in 1822.

In 1823 a Military Lodge Orion in the West was formed in the Bombay Artillery and installed at Poona as No. 15 of the Coast of Coromandel. It seems from Lane's records that in 1830 it was discovered that this Lodge was not on the records of the United Grand Lodge of England. A Warrant was subsequently issued bearing date 13th July 1833. According to the early proceedings of this Lodge, members were examined in the Third Degree and passed to the chair in the Fourth Degree for which a fee of three gold mohurs was charged. In the following year a second Lodge was established at Poona by the Provincial Grand Lodge of Bengal which however left no trace of its existence. In 1825 the civilian element of Orion seceded and formed the Lodge of Hope" also at Poona No. 802.

Here Orion unrecognized at home, aided in the secession of some of its members, who

obtained a warrant, on the recommendation of the parent Lodge from the Grand Lodge of England. Two years later it was discovered that no notification of the existence of "Orion in the West" had reached England nor had any fees been received although those including quartermasters had been paid into the Provincial Grand Lodge of Coromandel. It was further ascertained that in granting a warrant for a Bombay Lodge the Provincial Grand Master of Coromandel had exceeded his powers. Ultimately a new warrant No 598 was granted as already stated in 1833. Lodge "Perseverance" was started in Bombay No 318 in 1838. Up to this time the jurisdiction of the Grand Lodge of England in India had not been invaded, but in 1838 Dr James Burnes was appointed by the Grand Lodge of Scotland, F G M of Western India and its Dependencies No Provincial Grand Lodge however was formed until 1st January 1838. A second Scottish Province of Eastern India was started which on the retirement of the Marquis of Tweedal was absorbed within the jurisdiction of Dr Burnes who in 1848 became Provincial Grand Master for all India (including Aden) but with the proviso that this appointment was not to act in restraint of any future sub-division of the Presidencies. Burnes may be best described as being in 1833, in ecclesiastical phrase as a Provincial Grand Master in partibus infidelium for whatever Lodges then existed throughout the length and breadth of India were strangers to Scottish Masonry. But the times were propitious. There was no English Provincial Grand Lodge in Bombay and the Chevalier Burnes whom nature had endowed with all the qualities requisite for Masonic Administration soon got to work and presented such attractions to Scottish Freemasonry that the strange sight was witnessed of English Masons deserting their mother Lodges to such an extent that these fell into abeyance in order to give support to Lodges newly constituted under the Grand Lodge of Scotland. In one case indeed a Lodge "Perseverance" under England went over bodily to Scotland, with its name, jewels, furniture, and belongings and the change was accepted by Scotland. This Lodge still exists in Bombay and now bears No 318 on the Register of Scotland. From this period, therefore Scottish Masonry flourished and English Masonry declined until the year 1848 when a Lodge St George No 407 on the Rolls of the Grand Lodge of England was again formed at Bombay and for some years was the solitary representative of English Masonry in the Province. In 1844 Burns established a Lodge "Rising Star" at Bombay for the admission of Indian gentlemen the result of which is seen at the present day. Thus the seed planted at Trichinopoly in 1778 by the initiation of Andat-ul-Amari has borne fruit, resulting in the initiation of thousands of Indian gentlemen of all castes and creeds, and which has gone far to establishing that mutual trust between West and East, a distinguishing characteristic of Speculative Freemasonry. A Provincial Grand Lodge was re-established in Bombay in 1840 and converted into a District Grand Lodge in 1871.

The Grand Lodge of England—All three Constitutions of the United Kingdom, the United Grand Lodge of England, the Grand Lodge of Ireland and the Grand Lodge of Scotland hold jurisdiction in India. By far the largest is the first, the next largest is the third and the number

of Lodges under Ireland is as yet small. The Grand Lodge of England divides its rule under Five District Grand Masters independent of each other and directly subordinate to the Grand Master of England by whom they are appointed.

The Grand Lodge of Scotland exercises its rule through a Grand Master of all Scottish Freemasonry in India who is elected by the brethren subject to confirmation by the Grand Master Mason of Scotland. Mr H P Gibbs, A.M.I.L.T. ex J.P. is the present incumbent of the office and controls 71 Lodges under him in several districts are in charge of the following Grand Superintendents:—

Genl Sir Claud Jacob G Supdt Northern India
Col C J Inard Central
Major A E Andrews Southern
H L Acton Lancers

The Grand Secretary is R W Bro Arthur
W B Wise J.P. 17 Murchison Road Fort
Bombay

The Grand Lodge of Ireland granted a warrant to establish a Lodge at Kurnal in 1837 but it was short lived. An attempt was made in 1862 to establish a Lodge in Bombay but on the representation of the Grand Secretary of England to the Deputy Grand Secretary of Ireland that it would be objectionable to create a third masonic jurisdiction in the Province, there being two already, viz English and Scottish, the Grand Lodge of Ireland declined to grant the warrant. In 1911 however a warrant was sanctioned for the establishment of Lodge St. Patrick and since that year two other Lodges have sprung into being.

The Grand Lodge of Ireland has no District Grand Master in India at present, the Lodges corresponding direct with the Grand Lodge in Dublin. There are ten Lodges, 4 in Calcutta, 3 in Ceylon and 3 in Bombay.

Royal Arch Masonry—Under England the District Grand Master in any District is nearly always created also Grand Superintendent his Deputy as Second and another Companion as Third Principal.

Under Ireland there is no local jurisdiction and under Scotland the office is elective subject to confirmation.

The five English Districts are constituted as under —

Royal Arch Masonry under Scotland has a separate constitution to Craft Freemasonry. The District Grand Chapter of India is at present ruled by M. K. Camp. The Hon. Justice A. M. Kajji under whom there are about 30 Chapters in India. The Grand Secretary of all Scottish Freemasonry in India is also District Grand Scribe E. of Scottish E. A. Masonry.

There is one Irish Chapter in Calcutta.

Mark Masonry — Under England Mark Masonry is worked under the Grand Mark Lodge of England and Wales, and divided into separate Districts but in most cases the District Grand Master is also District Grand Mark Master.

The Mark degree is incorporated with the Royal Arch degree in Irish Chapters. Mark degree is worked in some S. C. Lodges, but

mostly in B. A. Chapters, in which the Excellent B. A. M. and other degrees can be obtained. S. C. Chapters insist upon candidates being Mark Master Masons before exaltation. Mark degree in Craft Lodges is conferred by the Rt. Wor. Master in S. C. Craft does not recognise the ceremony of Rt. W. Mark Master. This is confined strictly to Chapters. Each Chapter has a Lodge of M. M. M. working under its charter. Separate charters for Mark Lodges are only issued by the G. Chapter of Scotland.

Other Degrees — There are many side degrees worked in India of the Ancient and Accepted Rite no degree higher than the 18 is worked in India under England but under Scotland the 30° is worked. The Knight Templar Degree is also worked in several places under both English and Scottish Jurisdiction. There are fourteen 18th Degree Chapters working in India.

Scientific Surveys.

Botanical Survey—The Botanical Survey Department of the Government of India is under the control of a Director who is assisted by three other officers. They are engaged in the examination and identification of plants and the study of flora. The Director is also in charge of the cinchona plantations in Burma.

In connection with the general question of post war industrial policy the Government of India decided in 1916 that every effort should be made to extend the area under cinchona in India and deputed Colonel A. T. Gage late Director of Botanical Survey of India to explore land suitable for cinchona cultivation. As a result of his recommendations made in 1918 large areas in the Tavoy District of Burma were reserved for cinchona cultivation and the first plantations were started there in 1920. A programme was adopted for planting 500 acres annually which would produce 90 000 lbs per annum from 1928 onwards. Owing unfortunately to excessive rainfall in 1921-22 this plantation was entirely washed away and the Tavoy scheme had to be abandoned. A fresh area was selected however in the Mergui District of Burma and plantations were started there in 1922. The cultivation of cinchona has as still in the experimental stage.

At the instance of the Retrenchment Committee the area to be planted during the first four years has been limited to 250 acres per annum. The Governments of Bengal and Madras are also at the instance of the Government of India extending their cinchona plantations and it is proposed that Bengal should continue its sequence of planting 200 acres every year with cinchona. Madras 230 acres and the Government of India 250 acres annually.

The actual demand for the drug in India is difficult to estimate. Eight million cases of malaria fever go to the hospitals and dispensaries every year. If each of these is treated with 110 grains of quinine which may be taken as the minimum for the cure of a paroxysm the demand for hospital and dispensary treatment alone would be 125,000 pounds a year. Patients do not get as much of the drug as they ought because the cost of quinine is prohibitive. It is estimated that there are 100 000 000 sufferers from malaria who do not attend the hospitals. The potential demand is therefore somewhere between 125 000 pounds and 1 500 000 pounds. When the Italian Government, in 1903 made quinine a State industry and cheapened its retail price consumption in that country enormously increased and malaria mortality was reduced from 15,000 to 9 000 a year. The Public Health Commissioner with the Government of India says in a recent report that it may be said that there is no question of the effective treatment of malaria in India until consumption of quinine approximates 500,000 pounds.²

Geological Survey—The ultimate aim of the Geological Survey of India is the preparation of a geological map of India upon the accuracy of which the solution of most geological problems ultimately depends. Maps accompany the reports on the various areas in the publications of the Department and a large amount of information is made available to the public. Such maps represent pioneer work which enables prospectors and mining engineers to cut short their preliminary investigations and to start where the Geological Survey has left off. During the preparation of the geological map and the general survey of the country mineral deposits of importance are frequently discovered and every endeavour is made to induce private firms to take up the exploitation of the minerals discovered. Collections of minerals, rocks and fossils are accumulated and exhibited in the public galleries of the Indian Museum, situated in the capital of Bengal. Some of the most interesting and scientifically valuable additions to the collections in recent years have been the remains of anthropoid apes of great age discovered at different places in the Siwalik Mountain chain. These mountains are comparatively low range running parallel with the Himalayas for a great distance and at a short distance from them. They are in fact a huge bank of detritus washed down during the ages from the Himalayas. They are believed to have covered up in the course of their formation such a quantity of palaeolithic remains as exists nowhere else in the world. The discoveries of skeletons and fossils hitherto made have been the result of washaways after heavy rains or of other accidental circumstances and there exists no organisation or systematic method for either prosecuting discovery or collecting what chance brings to light. The Geological Survey also undertakes the examination and identification without fee of any minerals, rocks and fossils sent in by private observers. The publications of the Survey include the *Memoirs, Records and Palaeontologia Indica*.

Zoological Survey—A scheme for the formation of a Zoological Survey on the basis of the Zoological and Anthropological Section of the Indian Museum, Calcutta, came into force in July 1916. The proposals as sanctioned by the Secretary of State mainly are as follows—The headquarters of the Survey will be the Indian Museum. The scheme regarding the Zoological Survey entails the breaking up of the organisation now known as the Zoological and Anthropological Section of the Indian Museum into two parts one of which will become a Government department under the title of the Zoological Survey of India and will be primarily concerned with zoological investigation and exercise such advisory functions as may be assigned to it by Government while the other part will remain as the office of the Trustees of

the Indian Museum and will be organised for the present on the lines laid down in the existing by-laws of the Museum. It will be the duty of the Zoological Survey to act as guardians of the standard zoological collection of the Indian Empire and as such to give every assistance in their power both to officials and to others in the identification of zoological specimens submitted to them, arranging if it is requested to do so to send collections to specialists abroad for identification in cases in which no specialist is available in India. The Zoological Survey is also responsible for the Anthropological collections in the Indian Museum and in 1927 the additional appointment on the Staff of an anthropologist was created. The Director of the Survey was Dr. Anandale until April 1924 when he died—within a month of receiving the honour of fellowship of the Royal Society. Dr. Baidi Prasad was appointed Acting Director in his place and continued in that capacity until July 1925 when Lt. Col. R. E. Small, M.A., F.R.S.E. F.L.S. F.Z.S. was made Director.

Mammal Survey—The survey was instituted in the year 1891 with the object of making as complete a study as possible of the occurrence and distribution of Mammals in India, Burma, and Ceylon and with the further object of supplementing the collection of Indian Mammals at the Bombay Natural History Society's Museum and at the British Museum as well as at the Natural History Museum in India, the primary object of the Survey being the furtherance of our knowledge of Indian Mammalian Fauna. Up to 1891 Naturalists in India had to rely for information on Dr. Jerdon's *Mammals of India* published in 1874. In 1884 R. A. Sterndale published his *Natural History of Indian Mammals* a purely popular work which did not add much to Jerdon's book. In 1881 a memorial prepared by Dr. Slater, Hon. Secretary to the Zoological Society and signed by Darwin Hooker, Huxley and other well-known scientists was presented to the Secretary of State for India. The memorial recommended that a series of Volumes dealing with the Fauna of India should be prepared and Dr. Blanford should be appointed its Editor. The memorial resulted in the publication in 1888-1890 of the Volume on Mammals in the Fauna of British India. Series and since 1891 this volume has been the standard work on *Indian Mammals*. Blanford's book was however based on the information then available and the shortcomings of the book have been revealed in the light of more recent research. Further knowledge in regard to distribution and classification and the discovery of new species have rendered Blanford's practically obsolete.

To remedy this defect at the instigation of the authorities of the British Museum the Bombay Natural History Society decided to institute what is now known as the Mammal Survey. Mr. W. S. Millard, then Hon. Secretary of that Society, issued in an appeal to its members to enable the Society to engage the services of trained European collectors so as to make a systematic collection of the mammals of India, Burma and Ceylon. The response to the appeal resulted in over a lakh of rupees being raised between 1911 and 1920 partly by subscriptions from the Society's members, contributions from Indian Princes, and grants from the Indian

Government, the Government of Burma, Ceylon, Malay States, and the Provincial Governments. Subscriptions were also received from a few Learned Societies and Institutions in England and America. By the outbreak of the war the Survey had been carried on over large areas of the country. The districts covered being—In Western India a portion of Sind, the whole of Gujarat, Kutch and Kathiawar, the Southern Mahratta country and Kanara in Southern India, in Coorg and Mysore in the centre large tracts of the Central Provinces and some districts of Bengal and Behar in Northern India. The Society's collectors had worked over Kumaon, Darjeeling and Sikkim and the Bhutan Dwar. In Burma, collections were made along the Chindwin river in Central Burma and in the Shan States, Pegu and a portion of Tenasserim. The whole of Ceylon was also systematically surveyed.

The material which up to the outbreak of War comprised some 17,000 specimens was forwarded to the British Museum where the collections were scientifically worked out by the late Mr. R. C. Wroughton, formerly Inspector General of Forests, Mr. Oldfield Thomas, F.R.S., Curator of Mammals at the British Museum, Mr. Martin C. Hinton and others. The results of their researches were published in a series of scientific papers in the journal of the Bombay Natural History Society. The enormous mass of material then collected resulted in the discovery of large numbers of new forms and species and by increasing our knowledge of the distribution of Indian Mammals has enabled the revision of Blanford's *Mammals* to be undertaken and early in 1921 the Secretary of State for India commissioned Mr. R. C. Wroughton, since deceased and Mr. M. C. Hinton to undertake the work.

When demobilization rendered it possible the work of the Survey which had been in abeyance during the War was resumed and a collector Mr. C. Limbure was sent to Assam and the Mergui Archipelago and Mr. Oldfield Thomas has written very appreciatively of his work among these islands. Mr. Limbure then began working inland but owing to the impracticability of continuing his work in Burma during the monsoon he was transferred to Gwalior where Mr. H. H. Maharaja kindly accorded permission to work in his territories.

After working a portion of the Eastern Ghats the next move was to the Kungur District in the North West Himalayas and then on to the Punjab Salt Range. Two other collectors worked in Southern India. Permission was once more obtained from the Nepal Government for a collector to resume the Survey work in that country. The work in Nepal was brought to a successful close early this year with a representative collection of interesting mammals and birds.

The Survey now has only one collector who is collecting in the foot hills of Himalayas and the Pindari Valley.

The Board of Scientific Advice—This Board in accordance with a recommendation of the Indraprastha Return Committee is in abeyance. It consisted of the heads of the Meteorological, Geological, Botanical, Forest Survey, Agricultural and Civil Veterinary

Departments, together with such other scientific authorities as might from time to time be invited by the Government of India to serve upon it. It was established in 1902 to co-ordinate official scientific inquiry to ensure that research work is distributed to the best advantage and to advise the Government of India in prosecuting practical research into those questions of economic or applied science on the solution of which the agricultural and industrial development of the country so largely depends. The programme of investigation of the various departments were annually submitted to the Board for discussion and arrangement and an annual report was published on the work done.

The Secretary to the Government of India (Department of Education, Health and Lands) was *ex officio* President of the Board which included the Director General of Observatories, the Director of the Zoological Survey, the Surveyor General of India, the Director Imperial Institute of Veterinary Research, Mukdesar, the Inspector General of Forests, the Agricultural Adviser to the Government of India, the Director of the Geological Survey, the Director General Indian Medical Service, the Consulting Engineer to the Government of India, the Librarian, Imperial Library and the Director of the Botanical Survey of India who was Secretary to the Board of Scientific Advice.

The Universities Conference representing all Indian Universities which met in Bombay in 1925 recommended the revival of the Board but the technical officers of the Government of India were of a different opinion and the Board continues in abeyance.

The Indian Research Fund—The progress of this Fund and its Association like the Board of Scientific Advice was seriously affected by the policy of retrenchment enforced in pursuance of the recommendations of the Inchaape Committee. Scientific research work is rapidly developing in India. In 1911 the sum of 5 lakhs (£38,000) out of the surplus opium revenue was set aside as an endowment for research into epidemic diseases in connection with the Central Research Institute at Kasauli. It was hoped that this sum might be largely augmented by private subscriptions. An Indian Research Fund Association was constituted and a good deal of work was undertaken. Its objects were defined as the prosecution and assistance of research the propagation of knowledge and experimental measures generally in connection with the causation mode of spread and prevention of communicable diseases. Fresh investigations into kala azar and cholera were inaugurated, and an officer was deputed at the expense of the Fund to study yellow fever in the regions where it is endemic with a view to taking steps to prevent its introduction into India. A further grant of 5 lakhs (£40,000) was made to the Central Research Fund from the opium surplus of 1911-12. It was decided to devote to research and anti-malarial projects 5 lakhs (£40,000) a year from Imperial revenue commencing in 1913-14. A new periodical, *The Indian Journal of Medical Research* was instituted in 1918 for publication four times annually as the official organ of the Research Fund. The journal was designed to deal with every branch

of research directly or indirectly connected with medical and sanitary science and form a record of what was being done in India for the advancement of this work. In 1922 it was decided to devote the capital funds at the disposal of the Association to the erection of an Imperial Medical Research Institute and to the formation of a fund for its endowments. In the same year valuable results were achieved by Dr. Nishi Kanta Das working in Calcutta on the chemistry of drugs used in treatment of leprosy and on the chemistry of the blood of leprosy and resistant animals. The treatment of cancer of influenza of pneumonia the histology and pathology of deficiency diseases and special problems concerning Indian calicivirus kala azar the action of quinine in malaria treatment were among the particular subjects of investigations specially dealt with by various research experts. In 1922 further substantial grants to the Research Fund have recently been made by Government.

Survey of India—The work of the Survey of India Department falls under various heads namely the trigonometrical survey topographical and forest surveys special surveys and explorations and map production. Cadastral surveys are now carried out by the Provincial Land Records and Settlement Departments.

In 1904 attention was drawn to the defective state of the topographical survey maps and a Committee was appointed to report on the subject. To overtake the arrears of revisional survey and to secure that the map of India should be brought up to date and revised at proper intervals they recommended a considerable increase of establishment and an increased expenditure of Rs. 2,10,000 a year for the next 25 years. They also made recommendations for altering the size and improving the quality of the maps. After further inquiry the Government of India decided that a scale of 1 inch to the mile would ordinarily be sufficient reserved forest and special areas being surveyed on the scale of 2 inches to the mile and the 1 inch scale employed for waste and barren tracts. The work of the Department has in recent years greatly been hampered by the general need for retrenchment in expenditure. On the other hand its organisation has lately been improved by the creation of a new North West Frontier Circle under a separate Director this being the addition of a fifth Circle to the four already existing for all India and Burma. A recent valuable development has been the employment of aviators for survey work from the air in some parts of the country.

Indian Science Congress—The Indian Science Congress was founded largely owing to the efforts of Prof. P. B. Mahalanobis and Dr. J. L. Simonson. These two gentlemen worked jointly as Honorary General Secretaries of the Congress till 1921. The Asiatic Society of Bengal undertakes the management of the Congress finances and publishes annually the proceedings of the Congress. The objects are (1) to encourage research and to make the results generally known among science workers in India (2) to give opportunities for personal intercourse and scientific companionship and thus to overcome to some extent one of the chief drawbacks in the life of workers in science in India, (3) to promote public interest in science for this end the Congress is held

at different centres annually and evening lectures open to the public form an important part of the proceedings of each Congress.

The Congress which is progressive and vigorous, meets in January each year the proceedings last for six days. The Head of the Local Government is Patron of the Congress the Congress session is opened by a Presidential Address delivered by the President for the year. The President is chosen annually the different sections being represented in turn. The sections are (1) Agriculture, (2) Physics and Mathematics (3) Chemistry and Applied Botany (4) Zoology and Ethnography (5) Botany (6) Geology (7) Medical Research when the sections meet separately each section is presided over by its own President also chosen annually. The mornings are devoted to the reading and discussion of the papers the afternoons to social functions and visits to places of interest, in the evenings public lectures are delivered.

The Indian Research Fund Association—This Association was formed in 1911. The objects of the Association are the prosecution and assistance of research the propagation of knowledge and experimental measures generally in connection with the causation, mode of spread and prevention of communicable diseases. The Association started a new periodical *The Indian Journal of Medical Research* in 1913 as the official organ of the Research Fund. This journal is published four times a year and deals with every branch of research directly or indirectly connected with medical and sanitary science and forms a record of what is being done in India for the advance of this work. Special Memoirs are also published from time to time by the Association. Certain sums have been reserved for the erection of an Imperial Medical Research Institute but the project had to be abandoned during the post-war depression. It is being reconsidered by an expert Committee during 1928. The activities of the Association which were hampered by retrenchments recommended by the Income Committee have been revived. During 1927-28 84 enquiries are being conducted all over India at an estimated cost of Rs 1,162,265. The enquiries deal with plague, cholera, malaria, the dysentery, nutritional beriberi, febrile and other diseases. A Central Malaria Organisation or Malaria Survey of India has been constituted. This Organisation will stimulate and work in collaboration with provincial organisations of a similar nature. Two malariologists and one entomologist have been appointed to work in it. Raja Sir Krishna Chandra, Gajapati Narayana Deo Gura Rajah of Parlakimedi has given a donation of Rupees one lakh for the furtherance of research into problems of nutrition—the outlook is now brighter than it has been for some time.

The Survey of India—The department is responsible for all topographical surveys, for

explorations and the maintenance of geographical maps of the greater part of Southern Asia for geodetic work, including the main trigonometrical framework which extends in some cases far beyond the frontiers of India and control networks of precise levelling based on tidal observations, tidal predictions and the publication of Tide Tables for nearly 40 ports between Suva and Singapore the Magnetic Survey as trigonometrical observations with semi-magnetic and meteorological records at Dehra Dun and geodetic investigations of an international character in regard to which India enjoys a unique position between the greatest highlands of the world and a deep ocean extending to the Antarctic. Indian survey has thus distinguished by far the largest known anomalies of gravitational attraction in the earth's crust which have led to some of the most important developments in modern scientific research.

While expending on topographical and geodetic works all funds allotted by Imperial Revenue the department is steadily developing the policy of a financial survey in various ways on payment by those concerned. These miscellaneous operations include all forest and contour surveys and work for Boundary Commissions many certain irrigation railway and city surveys and surveys of tea gardens mining areas etc. with a great deal of control being due to them. Besides these administrative assistance and others are given to the various surveys of various provinces and States. The Printing office does much work for other Government departments such as printing special maps, illustrations for Archaeological Reports, all diagrams for lectures etc. The Mathematical Instruments Office gives valuable aid to all Government departments by ensuring a high standard of instrumental equipment especially in connection with optical work, and by the manufacture and repair of high class instruments which would otherwise have to be imported from abroad.

The department is also responsible for all survey operations required by the Army and has been rapidly developing measures to meet the greatly increased complexity of modern military requirement especially in connection with air survey. The development of air surveys for various civil purposes is also receiving all possible encouragement and assistance. While the latest methods of stereo photography are being studied experimentally.

Administration is by the Surveyor General under the Education, Health and Lands Department of the Government of India. Headquarters are at Calcutta under the Assistant Surveyor General and there are seven Directors one for each of the five Survey Circles into which the country is divided one for the Geodetic Branch at Dehra Dun and one for the Map Publication and other technical offices at Calcutta.

Posts and Telegraphs

POST OFFICE.

The control of the Posts and Telegraphs of India is vested in an officer designated Director-General of Posts and Telegraphs who works in subordination to the Government of India in the Department of Industries and Labour. The superior staff of the Direction in addition to the Director General himself, consists on the postal side of two Deputy Directors-General (who are officers of the rank of Postmaster-General) and six Assistant Directors-General (whose status is similar to that of Deputy Postmasters-General).

For postal purposes the Indian Empire is divided into nine circles as shown below each of the first eight is in charge of a Postmaster-General and the Sind and Baluchistan Circle is controlled by a Deputy Postmaster-General—Bengal and Assam, Bihar and Orissa, Bombay, Burma, Central Madras, Punjab and North West Frontier, United Provinces and Sind and Baluchistan. The Central Circle comprises roughly the Central Provinces and the Central India and Rajputana Agencies.

The Postmasters-General are responsible to the Director-General for the whole of the postal arrangements in their respective circles with the exception of those connected with the conveyance of mails by railways and inland steamers which are entrusted to three officers bearing the designation of Deputy Postmaster-General Railway Mail Service. All the Postmasters-General are provided with Personal Assistants while those in charge of the largest circles are also assisted by Deputy Postmasters-General. The nine Postal Circles and the jurisdictions of the three Deputy Postmasters-General Railway Mail Service are divided into Divisions each in charge of a Superintendent of Post Offices or Railway Mail Service, as the case may be and each Superintendent is assisted by a certain number of officials styled Inspectors.

Generally there is a head post office at the head quarters of each revenue district and other post offices in the same district are usually subordinate to the head Office for purposes of accounts. The Postmasters of the Calcutta, Bombay and Madras General Post Offices

and of the larger of the other head post offices are directly under the Postmaster-General. The Presidency Postmasters indeed have one or more Superintendents subordinate to them. When the duties of the Postmaster of a head office become so onerous that he is unable to perform them fully himself a Deputy Postmaster is appointed to relieve him of some of them and if still further relief is required one or more Assistant Postmasters are employed. The more important of the offices subordinate to the head office are designated sub-offices and are usually established only in towns of some importance. Sub-offices transact all classes of postal business with the public, submit accounts to the head offices to which they are subordinate incorporating therein the accounts of their branch offices and frequently have direct dealings with Government local sub-treasuries. The officer in charge of such an office works either single-handed or with the assistance of one or more clerks according to the amount of business.

Branch offices are small offices with limited functions ordinarily intended for villages, and are placed in charge either of departmental officers on small pay or of extraneous agents such as school masters, shopkeepers, land holders or cultivators who perform their postal duties in return for a small remuneration.

The audit work of the Post Office is entrusted to the Accountant-General, Posts and Telegraphs who is an officer of the Finance Department of the Government of India and is not subordinate to the Director-General. The Accountant-General is assisted by Deputy Accountants-General, all of whom, with the necessary staff of clerks, perform at separate headquarters the actual audit work of a certain number of postal circles.

In accordance with an arrangement which has been in force since 1883 a large number of sub-post offices and a few head offices perform telegraph work in addition to their postal work and are known by the name of combined offices. The policy is to increase telegraph facilities everywhere and especially in towns by opening a number of cheap telegraph offices working under the control of the Post Office.

The Inland Tariff (which is applicable to Ceylon and Portuguese India except as indicated below) is as follows—

	When the postage is prepaid	When the postage is unpaid	When the postage is insufficiently prepaid
<i>Letters</i>	<i>Anna.</i>		
Not exceeding two and a half tolas	1	Double the prepaid rate (chargeable on delivery)	Double the deficiency (chargeable on delivery)
Every additional two and a half tolas or part of that weight	1		
<i>Book and pattern packets.</i>			
Every 5 tolas or part of that weight	1		

Postcards.

Single — ½ anna
Reply — 1 "

(The postage on cards of private manufacture must be prepaid in full.)

Parcels (prepayment compulsory)

(a) Parcels not exceeding 40 tolas in weight —

Rs a
Not exceeding 20 tolas 0 2
Exceeding 20 tolas but not exceeding 40 tolas 0 3
For every additional 40 tolas or part of that weight 3 anna

b) Parcels exceeding 40 tolas in weight —
Exceeding 40 tolas but not exceeding 80 tolas Rs 3 0
4 annas for every additional 40 tolas or fraction thereof up to 800 tolas

Registration is compulsory in the case of parcels weighing over 40 tolas
These rates are not applicable to parcels for Portuguese India

In the case of parcels for Ceylon a registration fee of 2 annas is chargeable on each parcel in addition to the rates shown above

Registration fee

Rs a
For each letter postcard book or pattern packet or parcel to be registered 0 2

Ordinary Money Order fees

On any sum not exceeding Rs 10 0 2
On any sum exceeding Rs 10 but not exceeding Rs 25 0 4
On any sum exceeding Rs 25 up to Rs. 500 0 4

for each complete sum of Rs 25 and 4 annas or the remainder provided that if the remainder does not exceed Rs 10, the charge for it shall be only 2 annas

Telegraphic money order fees—The same as the fees for ordinary money orders plus a telegraph charge calculated at the rates for telegrams for the actual number of words used in the telegram advising the remittance according as the telegram is to be sent as an Express or as an "Ordinary message"

In the case of Ceylon the telegraph charge is calculated at the rates shown below —

Express—Rs. 2 for the first 12 words and 3 annas for each additional word

Ordinary—Rs 1 for the first 12 words and 2 annas for each additional word. Telegraphic money orders cannot be sent to Portuguese India.

Value-payable fees—These are calculated on the amount specified for remittance to the sender and are the same as the fees for ordinary money orders

Insurance fees—For every Rs 100 of insured value 2 annas

As regards Portuguese India see Foreign Tariff

Acknowledgment fee—For each registered article 1 anna

The Foreign Tariff (which is not applicable to Ceylon or to Portuguese India except in re-

spect of insurance fees for parcels and parcel postage) is as follows —

Letters.

To Great Britain and Northern Ireland and other British Possessions and Egypt, including the Sudan. 3 annas for the first ounce and 1½ annas for each additional ounce or part of that weight.

To other countries, colonies or places. 8 annas for the first ounce and 1½ annas for every additional ounce or part of that weight

Postcards Single 1½ annas
Reply 8 annas.

Printed Papers—½ anna for every 2 ounces or part of that weight

Business Papers—For a packet not exceeding 12 ounces in weight 3 annas

For every additional 2 ounces or part of that weight ½ anna

Samples—1 anna for first 4 ounces and ½ anna per 2 ounces thereafter

Parcels

(a) Parcels not exceeding 20 lbs in weight and addressed to Great Britain and Northern Ireland are forwarded as mails to the British Post Office, the rates of postage applicable to such parcels being as follows —

For
Gibraltar.

For a parcel—	Rs a p
Not over ½ lbs	1 8 0
Over ½ lbs but not over 7 lbs	2 12 0
7 " 11 "	3 15 0
11 " 20 "	6 6 0

These parcels are delivered by the post office and the postage paid carries them to destination

(u)—Parcels which exceed 11 lbs but which do not exceed 50 lbs (the maximum allowed) in weight are forwarded from India through the medium of the P & O S N Co, and are delivered at destination under arrangements made by that Company. The postage charge applicable to such parcels is twelve annas for each pound or fraction of a pound. Parcels are delivered free of charge within a radius of one mile from the Company's Head Office in London if addressed to any place beyond that radius carrier charges are levied from the addressee on delivery. Parcels thus forwarded through the P & O S N Co cannot be insured during transit beyond India, but must, if they contain coin, etc be insured during transit in India. No acknowledgment of delivery can be obtained in respect of these parcels nor can such parcels be transmitted to Great Britain and Northern Ireland under the value-payable system.

Limits of Weight

Letters—4 lbs 6 oz

Printed Papers and Business Papers—To Great Britain and Northern Ireland and the Irish Free State British Australasian Colonies Hong Kong the Straits Settlements Togo (British) the Union of South Africa Rhodesia and the Bechuanaland Protectorate—3 lbs.

To Ceylon—No limit

To all other destinations—4 lbs 6 oz

Samples—To Great Britain and Northern Ireland and the Irish Free State Hong Kong the Straits Settlements Togo (British) the Union of South Africa Rhodesia and the Bechuanaland Protectorate—3 lbs

To Ceylon—200 talas

To all other destinations—1 lb 2 oz

Parcels—11 lb

Limits of Size

Letters—1½ feet length by 1½ feet in width or depth If in form of roll ½ feet in length and 4 inches in diameter

Printed Papers and Business Papers—To Ceylon—1 foot in length by 1 foot in width or depth

To all other destinations—1½ feet in length by 1½ feet in width or depth

If in form of roll dimensions in all cases are 30 inches in length and 4 inches in diameter

Samples—To Great Britain and Northern Ireland, and the Irish Free State Ceylon Hong Kong the Straits Settlement the Union of South Africa Rhodesia and the Bechuanaland Protectorate—4 feet in length by 1 foot in width or depth

To all other destinations—1½ feet in length by 8 inches in width and 4 inches in depth

If in form of roll, dimensions in all cases are 1½ feet in length and 6 inches in diameter

Money Orders—To countries on which money orders have to be drawn in rupee currency the rates of commission are the same as in the case of inland money orders

To countries on which money orders have to be drawn in sterling the rates are as follows—

On any sum not exceeding £1	Rs 0
“ “ exceeding £1 but not exceeding £2	“ 0 5
“ “ “ £2 “ “ £3	“ 0 5

On any sum exceeding £2

but not exceeding £4	0 10
“ “ “ £4 “ “ £5	0 12
“ “ “ £5 “ “ “	0 12

for each complete sum of £5 and 12 annas for the remainder provided that if the remainder does not exceed £1 the charge for it shall be 3 annas if it does not exceed £2, the charge for it shall be 5 annas if it does not exceed £3, the charge for it shall be 8 annas and if it does not exceed £4 the charge for it shall be 10 annas.

Insurance fees (for registered letters and parcels only)

For insurance of letters and parcels to Mauritius, Iraq and British Somaliland and of parcels to Portuguese India the Seychelles and Zanzibar—

Where the value insured does not exceed Rs 200 Annas 5

For every additional Rs 200 or fraction thereof 6

For insurance of letters and parcels to Great Britain and Northern Ireland and to British Possessions and Foreign countries other than those mentioned above and for insurance of letters to the Seychelles and Zanzibar—

Where the value insured does not exceed £12 Annas 5

For every additional £12 or fraction thereof 6

Acknowledgment fee—3 annas for each registered article

Magnitude of business in Post Office—

At the close of 1927 there were 107,421 postal officials, 3,073 post offices, and 181,289 miles of mail lines. During the year 1,293 million articles including 51 million registered articles were posted stamps worth Rs 60 millions were sold for postal purposes over 37 million money orders of the total value of Rs 897 millions were issued a sum of Rs 273 millions was collected from tradesmen and others on 4 P articles over 5 million insured articles valued at 1,432 millions of rupees were handled Customs duty aggregating over 4 million rupees was realised on parcels and letters from abroad pensions amounting to Rs 15.8 millions were paid to Indian Military pensioners and 13,496 lbs of quinine were sold to the public. On the 31st March 1927 there were 2,618 14 Savings Bank accounts with a total balance of Rs 2,96 millions and 53,648 Postal Life Insurance policies with an aggregate assurance of Rs. 101 millions

TELEGRAPH DEPARTMENT

Telegraphs.—Up to 1912 the telegraph system in India was administered as a separate department by an officer designated Director General of Telegraphs who worked in subordination to the Government of India in the Department of Commerce and Industry. In that year it was decided to vest the control of Posts and Telegraphs in a single officer as an experimental measure with a view to the eventual amalgamation of the two Departments.

In pursuance of this policy an experimental amalgamation of the two services was introduced in the Bombay and Central Circles from the 1st July 1912. The fundamental principles of this scheme which followed closely the system in force in the United Kingdom and several other European countries were that the traffic and engineering work of the Telegraph Department should be separated, the former branch of work in each Circle being transferred to the

Postmaster-General assisted by a Deputy Postmaster-General and a suitable number of attached officers and the engineering branch being controlled by a Director of Telegraphs in charge of the two Circles. Subordinate to this officer there were several Divisional Superintendents who were assisted by a number of attached officers.

In 1914 the complete amalgamation of the two Departments was sanctioned by the Secretary of State and introduced from 1st April. The superior staff of the Direction in addition to the Director General himself consists on the engineering side of a Chief Engineer Telegraphs with two Dy Chief Engineers. For traffic work there is a Deputy Director-General with an Assistant and an Assistant Director-General. On the 27th March 1920 a Controller of Telegraph Traffic was appointed to assist the Deputy Director-General in the inspection of offices and in controlling telegraph traffic. In the Circles the scheme which has been introduced follows closely on the lines of the experimental one referred to above. For telegraph engineering purposes India is divided up into five Circles each in charge of a Director. For Burma special arrangements were considered necessary and the engineering work is in charge of the Postmaster-General who is a Telegraph officer specially selected for the purpose. These six Circles are divided into twenty-one Divisions each of which is in charge of a Divisional Engineer. On the 1st July 1922 Sind and Baluchistan circle was formed with its headquarters at Karachi. This circle is in charge of a Deputy Postmaster-General. On the 31st March 1924 there were 7 Circles and 20 Divisions.

The telegraph traffic work is under the control of the Postmaster-General each of whom is assisted by a Deputy Postmaster-General and a suitable staff of attached officers.

The audit work of the Telegraph Department is, like that of the Post Office, entrusted to the Accountant-General, Posts and Telegraphs assisted by a staff of Deputy and Assistant Accountants-General.

Inland Telegrams and Tariff.—Telegrams sent to or received from places in India or Ceylon are classed as inland telegrams. The tariff for inland telegrams is as follows—

	For delivery in India		For delivery in Ceylon	
	Private and State		Private and State	
	Ex press Rs. a.	Ordinary Rs. a.	Ex press Rs. a.	Ordinary Rs. a.
Minimum charge, 1 word over 12	0 8	0 12	2 0	1 0
Each additional word over 12	0 2	0 1	0 3	0 2
The address is charged for				
Additional charges				
Minimum for reply-paid telegram	Minimum charge for an ordinary telegram			
Notification of delivery				
Multiple telegrams, each 100 words or less	4 annas			
Collection	One half of the charge for an ordinary telegram of same length			

	Rs.
If both the offices of origin and destination are closed	2
If only one of the offices is closed	1
If the telegram has to pass through any closed intermediate office an additional fee in respect of each such office	1
For acceptance of an Express telegram during the hours when an office is closed	
Signalling by flag or semaphore to or from ships—per telegram	The usual in-land charge plus a fixed fee of 8 annas
Post hire	Amount actually necessary
Copies of telegrams each 100 words or less	4 annas

	For delivery in India		For delivery in Ceylon	
	Ex press Rs. a.	Ordinary Rs. a.	Ex press Rs. a.	Ordinary Rs. a.
Minimum charge	1 0	0 6	1 0	0 2
Each additional 6 words over 48 in respect of India				
Each additional four words over 32 in respect of Ceylon	0 2	0 1	0 2	
The address is free				

Foreign Tariff.—The charges for foreign telegrams vary with the countries to which they are addressed. The rates per word for private and state telegrams to countries in Europe are as follows—

	Ordinary		Deferred		State (British Govt.)	
	Rs. a.	Rs. a.	Rs. a.	Rs. a.	Rs. a.	Rs. a.
All countries in Europe (except France, Russia and Turkey) via Eastern	3	0	1	0	0	8
Do via Indo	3	0	1	0	0	8
Great Britain and Northern Ireland via I.R.T.	—	0	12	0	6	0
Most other countries in Europe via I.R.T.	—	10	0	0	8	0

Radio-Telegrams.—For radio-telegram addressed to ships at sea from offices in India or Burma and transmitted via the coast stations at Bombay, Calcutta, Karachi, Madras, Port Blair or Rangoon the charge is ten annas per word in nearly all cases.

The following are the charges for radio telegrams from Offices in India or Burma transmitted to ships at sea from the coast stations mentioned in paragraph 1 above —

	Total charge per word
Rs. a.	
(1) All Government or Private Radio-telegrams excepting those mentioned in (2) to (5) below	0 10
(2) British, Indian or Colonial Government Radio-telegrams to His Britannic Majesty's Ships of War or Royal Indian Marine ships	0 6
(3) Private Radio-telegrams to His Britannic Majesty's Ships of War	0 6
(4) Radio-telegrams to Argentina, Belgium, Chilean, Danish, Dutch, Greek, Norwegian, Portuguese, Rumanian and Yugoslav ships —	
(a) For ten words or less six annas per word plus a fixed charge of Rs. 1 10	
(b) For more than ten words ten annas per word	
(5) Radio-telegrams to Roumanian, Spanish and Swedish ships —	
(i) For ten words or less six annas per word plus a fixed charge of Rs. 1 10	
(j) For more than ten words nine annas per word	

The sender of a radio-telegram may prepay a reply. He must insert before the address the instruction R. P. followed by mention in Rupee and annas of the amount prepaid e.g. R1 10. This expression counts as one word.

DAILY LETTER TELEGRAMS

Daily Letter Telegrams in plain language which are dealt with telegraphically throughout are accepted on any day of the week excluding Sundays and telegraph holidays and are ordinarily delivered to the addressee after forty-eight hours. They are subject to the conditions prescribed for Deferred Foreign telegrams with certain exceptions as stated below.

The charge for a Daily Letter Telegram is a quarter of the charge for a full rate telegram of the same length and by the same route subject to a minimum charge equal to the charge for 20 words at such reduced rate.

The late fee system does not apply to Daily Letter Telegrams and such telegrams are not accepted during the closed hours of an office.

On Indian lines, Daily Letter Telegrams are transmitted after Deferred Foreign telegrams.

In the Daily Letter Telegram service the special instructions relating to prepayment of replies are admitted other special services are inadmissible in DLT Telegrams.

Letters and messages intended to be communicated to different persons are not accepted in the text of Daily Letter Telegrams.

Daily Letter Telegrams to Great Britain and India via Eastern or Indian R.T. are accepted at one-fourth the rate for ordinary telegrams subject to a minimum of 20 words per telegram including the indication DLT. The charge for a word telegram to Great Britain and Northern Ireland is 3 annas a word via Eastern or Indian R.T. annas a word via R.T. subject to a minimum of 20 word per telegram including the indication TWT.

Week end Telegrams (To Great Britain only) accepted on Saturday or any previous day or delivery on the following Monday—3 annas per word

Daily and Week-end Letter Telegrams—Minimum charge for 20 words

Ordinary rate telegrams may be written in Code

Telegrams are accepted at all Government Telegraph Offices

Usual rules apply regarding Registration Reply paid etc

Full rate published in Post and Telegraph Guide

Growth of Telegraphs.—At the end of 1899-98 there were 3030 miles of line and 135,088 miles of wire and cable as compared with 511,867 wire including cable and 84,126 line including cable miles, respectively on the 31st March 1927. The numbers of departmental telegraph offices were 2,7 and 153 including 53 coast Radio offices respectively while the number of telegraph offices worked by the Post Office rose from 1,634 to 3,852

The increase in the number of paid telegrams dealt with is shown by the following figures—

	1897-98.	1926-27
Inland { Private	4 107,270	14,539,471
{ State	860,382	1,066,063
{ Press	35,910	458,992
Foreign { Private	785,679	2,891,077
{ State	9,898	30,806
{ Press	5,278	38,238
	5,754,415	19,022,602

The outturn of the workshops during 1926-27 represented a total value of Rs. 20,30,853. At the end of the year the total outlay of the Indian P. & T. Department to end of the year staff numbered 14,661, the total capital amounted to Rs. 12,14,31,780. The Net profit for the year was Rs. 10,24,002.

Wireless.—The total number of Departmental wireless stations open at the end of 1926-27 was twenty-four viz. Allahabad, Bombay, Calcutta, Delhi, Diamond Island, Jutogh, Karachi, Lahore, Madras (3 stations), Mhow, Nagpur, Peshawar, Poona, Port Blair, Quetta, Rangoon (3 stations), Sandheads (two pilot vessels), Secunderabad and Victoria Point of which only Port Blair and Victoria Point worked telegrams direct from the public.

The new Duplex high-speed service between Rangoon and Madras continued to work satisfactorily the Bandot system being employed generally for this circuit.

Telephones.—On the 31st March 1927 the number of telephone exchanges established by the Department was 11 with 15,051 straight line connections and 2,074 extension telephones. Of these exchanges, 114 were worked departmentally the number of telephone exchanges established by Telephone Companies was 16 with 28,384 connections.

Sanitation.

The history of the sanitary departments in India goes back for about fifty years. During that period great improvements have been effected in the sanitary condition of the towns though much remains to be done, but the progress of rural sanitation which involves the health of the great bulk of the population has been slow and incommensurate with the thought and labour bestowed on the subject. The reason lies in the apathy of the people and the tenacity with which they cling to domestic customs injurious to health. While the inhabitants of the plains of India are on the whole distinguished for personal cleanliness, the sense of public cleanliness has ever been wanting. Great improvements have been effected in many places, but the village house is still often ill ventilated and over populated, the village

site dirty crowded with cattle choked with rank vegetation and poisoned by stagnant pools and the village tanks polluted and used indiscriminately for bathing, cooking and drinking. That the way to improvement lies through the education of the people has always been recognised.

Of recent years the pace has been speeded up as education progressed, education developed and funds were available. In a resolution issued in May 23rd 1914 the Government of India summarised the position at that time, and laid down the general lines of advance. This resolution (*Gazette of India May 25th 1914*) should be studied by all who wish to understand the attitude of the Government of India towards sanitation prior to the passing of the Reform Act of 1919. It will be found

summarised in the Indian Year Book of 1922 (page 475 *et seq*) and earlier editions. One of the greatest changes effected by the Reform Act of 1919 was the transfer of sanitation to the provinces making it a subject directly responsible to local control through Ministers. It is very full early to attempt to indicate the effects of this change.

The Public Health Commissioner with the Government of India in a general review of health organisation in British India which he laid in January 1923 before the Interchange Study Tour organised for Medical Officers of Health from the Far Eastern Countries by the Health Organisation of the League of Nations concluded that the State effort in regard to Health Organisation in British India is one of no mean importance that it has evolved over a complex of centuries during which many mistakes in policy must be admitted that it has provided the officers and the stimulus necessary for laying the foundations of medical education that it has tried to uphold the ethical standard of western medicine and that in what is ever way it is regarded that an effort of which no Government need be ashamed. He quoted the remark of the Government of India in their Resolution of 1914 that "in the land of the ox cart one must not expect the pace of the motor car."

The Public Health Commissioner in his latest published annual report (for 1920) notes the introduction of the political element into health matters as a result of the Reforms and says that the improvements being introduced before the Reforms are in some provinces now in a fair way to maturing but that in other provinces with less appreciation of the actual needs so far from adding to the organisation a thir have found it have shown a desire to sweep away some of what they originally possessed. But he says though the picture is neither bright nor the future rosy it is becoming increasingly evident that a considerable section of the Indian community is thinking seriously on these public health problems and much futile and destructive criticisms of State and municipal efforts here and there valuable and suggestive

criticism can be met with which goes to prove my contention.

India's birth rate in 1905 was nearly twice that of England and Wales her death rate was twice that of England and Wales and nearly three times that of New Zealand and her infantile mortality rate was nearly 24 times that of England and Wales and nearly 41 times that of New Zealand. The information furnished for the great group of infectious diseases of world import i.e. plague, cholera, small pox, yellow fever, typhus, malaria and dysentery shows (says the Public Health Report already cited) that it was except typhus and yellow fever India is one of the world's reservoirs of infection for the other and the main reservoir of infection for plague and dysentery. The significance of these facts must add to the Commissioner's obvious to all who think. Briefly their implication is that India's house, from the public health point of view, is badly out of order and that this disorder requires to be attended to. Let not for India to say that so far as she is concerned prevention is impossible. If we think of the effect of sunlight on tubercle ridden children, of the effect of lying on rocks, a very and harmful of the way in which malaria, cholera, yellow fever, dengue, ankylostomiasis and filariasis can be and have been overcome we need have no fear in regard to India provided the necessary measures are put into operation.

The Public Health Commissioner in an address before the annual congress of the Far Eastern Association of Tropical Medicine held in Calcutta in December 1927 urged the importance of instituting a Central Ministry of Health which should be charged with the functions of co-ordinating the policies and activities of the department concerned in the several provinces and with keeping them abreast of scientific progress. There is at present no Public Health Act for the whole of India nor and except the administrative arrangements is one immediately possible but the desirability of the Central Ministry of Health and of such an Act is likely to be urged in the course of the revision of the Constitutional Reforms now in progress.

Province	Birth Rates (per mille)		Death Rates (per mille)	
	1925	1924	1925	1924
Delhi	41.80	42.4	29.68	33.57
Bengal	29.60	29.5	24.30	25.9
Bihar and Orissa	36.00	35.7	23.70	29.1
Assam	29.08	31.04	22.52	27.80

Punjab	40.10	40.1	30.00	43.4
N. W. Frontier Province	26.90	26.0	19.80	31.0
Central Provinces and Berar	43.80	44.18	27.21	32.59
Madras	33.70	34.9	24.40	24.5
Coorg	15.88	21.20	30.39	41.06
Bombay	34.86	35.60	23.86	27.63
Barma	26.36	27.40	18.73	21.54
Ajmer Merwara	33.18	33.33	23.50	24.96

Chief Causes of Mortality—There are three main classes of fatal diseases—specific fevers, diseases affecting the abdominal organs and lung diseases, intestinal and skin parasites, ulcers and other indications of scurvy widely prevail. The table below shows the number of deaths from each of the principal diseases and from all other causes in British India and death rates per 1 000 —

Province	Cholera	Small pox	Plague	Fever	Dysentery and Diarrhoea	Respiratory Diseases	All other causes
Delhi	50 09	190 26	80 10	8 49.5 16 97	35 71	4 298 8 56	1 480 2 86

The Public Health Commissioner in his annual review shows that the outstanding statistical data concerning health during the year 1925 are briefly as follows—

(1) The birth rate fell down from 34.40 per mille in 1924 to 33.65 per mille in 1925.

(2) The death rate fell from 28.49 per mille in 1924 to 24.72 per mille in 1925.

(3) The infantile death rate fell from 189 in 1924 to 174 in 1925.

He shows that taking the year as a whole rainfall was within 25 per cent of the normal except in Orissa and the Madras Coast North where it was in moderate excess and in Baluchistan, Sind, Rajputana and Gujarat where it was in large defect.

Birth ratios exceeded death ratios in all provinces except Coorg, where the death rate was in

excess by 3.03 (Central Provinces (16.63) Delhi (11.94), Bihar and Orissa (11.9), Bombay (11.0) Punjab (10.09), Ajmer Merwara (9.68), Madras (9.3) were among the big birth increases. Deaths throughout British India numbered 3 967 918 as compared with 3 899 286 in the preceding year—a decrease of 911 668. Registered births exceeded registered deaths by 2 157 490 against 1 438 117 in 1924. All provinces excepting Coorg having contributed to this. The death rate was 24.72 as against 28.49 in 1924 and a quinquennial mean of 27.74. The urban death rate was 29.85 against 31.65 and the rural rate was 24.30 against 28.19 in 1924. In Delhi, Bengal and Bihar and Orissa the rural rates exceeded the urban ones. In Coorg the urban rate exceeded the rural one by 28.37. In Burma by 37.45 and in the United Provinces by 11.54.

Of the total mortality 1 416 983 deaths or 23.7 per cent occurred during the first year of life against 1 589 138 and 22.8 per cent respectively in 1924. In England and Wales the corresponding figures for 1924 and 1925 were 11.6 per cent and 11.3 per cent respectively. The infantile death rate calculated on the births recorded during the year was 174 as against 189 in 1924 176 in 1923 and 175 in 1922. In British India 702.571 (49.68 per mille) of the infantile deaths occurred during the first month of life against 48.1 in 1924 and 49.5 in 1923. This equals 68 per thousand of live births—a rate again in excess of the total infantile mortality rate in England and Wales, which was 75 per mille births registered. In all towns with over 10 000 inhabitants in the

United Provinces, Assam, Bombay, Central Provinces and the rural areas of Bombay the death rates decreased while in the rural areas in Madras and all similar towns in Burma and Madras they increased. The accuracy of the figures is subject to the known defects in registration as to which the Public Health Commissioner writes. The checking which has been attempted in various provinces varies according to the ideas of the public health departments concerned. The prevailing impression one gathers is that little progress is able to be recorded anywhere and it is very difficult, with economic and other conditions being what they are to visualise any very rapid or drastic amelioration.

THE HEALTH OF THE ARMY

British.—The average strength of British Troops, R.A. R.A.F. and pensioners and others and included on the strength were also 5,033 women and 7,347 children in India during 1924 was 60 097 as compared with 58 614 in 1924. The following table shows the main facts as regards the health —

	Average Strength	Admissions to Hospital		Deaths		Invalids sent Home		Invalids Discharged in India		Average (constantly) sick.	
		No.	Ratio per 1 000	No.	Ratio per 1 000	No.	Ratio per 1 000	No.	Ratio per 1 000	No.	Ratio per 1 000
Officers	27 19	1 600	60.0	14	5.15	46	17.65	1	0.37	60.54	22.27
Other Ranks	57 88	36 069	62.8	166	2.89	972	16.94	25	0.44	1750.1	30.50
Women	632	2 593	40.1	23	4.06	92	16.34	1	0.16	76.79	13.63
Women Parturition		875									
Children	7 747	2 614	33.4	101	13.04	12	1.55	1	0.13	76.94	10.27
R.A. R.A.F. Pensioners Others		901		11							

The health statistics of Officers and other ranks for the quinquennial period 1910-14 1915-19 and 1920-24 are given with those for 1924 separately for purposes of comparison —

Period.	Admissions		Invalids		Deaths	
	Officers	Other Ranks	Officers	Other Ranks	Officers	Other Ranks
1910-14	587.5	567.2	16.30	7.03	5.14	4.36
1915-19	1 063.0	881.7	60.38	26.91	10.54	8.81
1920-24	676.7	791.9	20.99	18.91	6.71	5.24
1925	607.6	623.6	18.02	17.38	5.15	2.80

The proportion of other ranks admitted to hospital was 628.6 per 1,000 compared with 655 in 1914, 595.4 in 1923, 628.9 in 1922, 1,032.3 in 1921 and 540.5 in 1913. The appreciable diminution in disease during 1925 was mainly due to lessened malaria, which remains as before the principal cause of sickness in India. There were 168 deaths or .99 per 1,000 of strength compared with 4.20 per 1,000 in 1924, 3.75 in 1923, 4.72 in 1922, 6.96 in 1921 and 4.36 (average) in 1910-14. The figure for 1925 constitutes a record. The number invalided was 997 or 17.38 of the total strength, compared with 15 per 1,000 in 1924, 15.51 in 1923 and 8.03 (average) for 1910-14. The increase in this figure was solely due to diseases of the ear. In 1914 men invalided for diseases of the ear numbered 100 and in 1925 this figure rose to 404. Of all the invalids, 55% had less than one year's service in the country and of these 137 suffered from diseases of the ear. The

average number constantly in hospital and the average sick time to each soldier were approximately the same as before the war.

An analysis of the different causes of sickness shows an enormous preponderance of disease due to bites of mosquitoes and sandflies and shows the importance of preventive measures directed against these pests. The large number of hospital admissions for inflammation of areolar tissue is also attributed in some measure to the same causes on account of the irritation of the bites and subsequent scratching and infection. The Northern Command as usual had the greatest incidence of malaria and Burma District of venereal disease. The figures for Waziristan are remarkably good and it is pointed out that most of the British troops there are concentrated at Koznak, a hill station. They are 44 per cent better than in 1914 and improvement attributed to better housing and an increase in the ration allowance.

Indian.—The outstanding feature of the statistics for 1925 in regard to the Indian Army is that the ratios per 1,000 for admissions, deaths and average constantly sick are in each case a record low figure in the annals of the Indian Army. The following table shows the main health statistics by years:—

Period	Average strength	Admissions	Deaths	Invaliding	Average constantly sick	RATIOS PER 1,000 OF STRENGTH				Average period of illness of each soldier calculated on average strength.	Average duration of each case of sickness
						Admissions.	Deaths	Invalids	Average constantly sick		
1910-14 (Average)	110,081	71,210	5.73	699	2,602	144.6	4.39	6.4	20.7	7.11	13.50
1911-19 (Average)	204,295	161,028	3.42	4,929	779	788	16.81	23.6	38.1	13.9	17.03
1920	216,445	164,967	2.124	4,584	9,265	782	9.41	21.1	42.8	17.62	20.59
1921	173,384	119,211	1.782	3,638	6,031	879	10.16	20.7	34.4	12.55	19.47
1922*	147,840	77,406	1.014	2,650	3,639	124.0	0.86	18.0	24.0	8.08	17.10
1923*	143,234	66,841	856	2,328	2,935	438.7	1.48	16.3	20.6	7.04	16.13
1924*	134,742	57,014	772	1,731	2,432	424.1	5.73	12.8	18.0	6.61	10.61
1925*	136,473	48,691	547	1,712	2,019	356.8	4.01	12.5	10.04	5.99	15.39

*The figures for stations outside India i.e. Aden and Basra have been included.

The admission rate (for 1925) is 356.8 per 1,000 and shows a decrease of 66.3 per 1,000 as compared with 1924. The ratio per 1,000 for deaths is 4.01 as compared with 5.73 and the ratio per 1,000 for average constantly sick 16.04 as compared with 18.05 in 1924.

The ratio per 1,000 for invalids is 12.5 and is the lowest since 1914. However it is still more than double the figure for the quinquennial

period 1910-14. The hospital admission ratios for the chief diseases show a marked fall in the incidence of Malaria. The early and short monsoon did not favour the occurrence of a malaria epidemic. There is a welcome improvement in the incidence of small pox and of venereal disease. A slight increase is shown in influenza, the entire group of fevers, sandfly fever and diarrhoea.

MORTALITY FROM WILD ANIMALS

The total number of persons killed by wild animals in British India during 19.5 amounted to 1 982 as against 2,587 in the previous year. Tigers were responsible for 974 deaths, leopards for 151 wolves for 265 bears for 52 elephants for 78 and humans for 6. Deaths were highest from tigers in Madras from leopards in the Central Provinces and Berar from wolves in the United Provinces, from bears in Bihar and Orissa and from elephants in Assam. Of the 6 deaths from other animals 73 were assigned to wild pigs and 98 to crocodiles and alligators. The highest number of deaths from all wild animals occurred in Madras (402), Bihar and Orissa the United Provinces and the Central Provinces and Berar coming next in order. The mortality from elephants showed a marked increase in provinces where these animals are found wild. There has been a not

noticeable decrease in deaths from all other animals except bears in almost all provinces.

Deaths from snake bite fell from 19,367 to 19,338. Decreases occurred in Madras the United Provinces the Punjab Burma Bihar and Orissa the Central Provinces and Berar and Assam but Bombay and Bengal have reported slight increases.

During the year 1,805 wild animals were reported to have been destroyed of which 1,609 were tigers, 4,650 leopards 2,485 bears and 2,391 wolves. A sum of Rs 1,50,667 was paid in rewards against Rs 1,89,720 in the previous year. The number of snakes destroyed in India proper decreased from 47,106 to 41,004 and the rewards paid for their destruction were Rs. 1,57,939 as against Rs 1,40,130 in the previous year.

MEDICAL INSTITUTIONS

There were 8,966 State Public, Local Fund and Private Aided Civil Hospitals and Dispensaries in India at the end of 19.5 as compared with 5,669 in 19.4 an increase of 28%. The total number of patients treated was 41,13,578 (732,970 in patients and 40,402,60 outpatients) as compared with 38,68,249 (694,831 in patients and 38,088,49 outpatients) in 19.4. The increase was noticable in all provinces except Assam and the United Provinces. The greatest reduction was in the district of Assam partly due to the levy of a fee of one anna per out-door patient on each new case.

The number of Mental Hospitals throughout British India was 20, compared with 22 in 1924 and their total population 10,992 against 9,712 in 1924. The criminal population of the mental hospitals numbered 1,641 in 19.5 against 369 in 19.4.

There were in 1925 eight Medical Colleges in India and 38 Medical Schools. There is at Dehra Dun an X Ray Institute wherein training is given in radio-diagnostic radio- and electric therapy and radiology the number of students in 19.5 being 62. There are officially maintained X Ray installations at Delhi and Sholna.

LEPROSY IN INDIA

It is exceedingly difficult to give anything approaching an accurate estimate of the total number of leprosy in the Indian Empire to-day. The census figures of 19.1 give the total as 10,513 as against 109,094 in 1911. But it is doubtful if this figure represents anything more than the more advanced cases and possibly a majority of this number are the beggars and pauper lepers who are seen all over the country. Dr K. Muir M.D., F.R.C.S., the Leprosy Research Worker at the Calcutta School of Tropical Medicine says that we think that it would not be an over estimate to put down the number of leprosy in India somewhere between a half and one million.

Early in the year 1924 the British Empire Leprosy Relief Association was constituted in England with H. R. H. The Prince of Wales as Patron the Viscount Chelmsford as Chairman of the General Committee and H. R. the Viceroy of India as one of the Vice Presidents. Following its formation and in view of the good results being obtained from the newest treatment of leprosy, H. R. the Viceroy felt that the time was auspicious for the inauguration and carrying on of an earnest campaign with the object of ultimately stamping out leprosy from India.

His Excellency invited certain gentlemen representing various interests to form an Indian Council of the Association which he formally inaugurated at a public meeting in Delhi on the 27th January 1925.

His Excellency is its President and Sardar Bahadur Balwant Singh I.M.S. Honorary Secretary of the Association.

A special research worker on a salary of Rs 1,00-75 1,000 has been appointed for five years who is working under Dr K. Muir M.D., F.R.C.S., in the School of Tropical Medicine and Hygiene Calcutta where doctors are trained in the special treatment of leprosy.

The whole of the first year of the Indian Council was occupied with preliminary organizing work and very early in its second year 1926 it began to put its work into operation. The General Committee is under the finally adopted scheme vested with the task of promoting research preparing and publishing propaganda material and arranging for the training of doctors in the diagnosis and treatment of leprosy. Measures for the accommodation and treatment of leprosy patients and other schemes of purely local interest are the concern of Provincial Committees working as agents of the Indian Council. One of the early decisions of the Council therefore related to the apportionment of the revenue of the Fund as between the Central and Provincial Governments. It was decided that the total revenue less the income of contributions received from Ruling Princes, which according to their wishes has been earmarked for the promotion of research under the direction of the Central Committee should so be allocated that the amount distributed to

Provincial Committees should not be less than 50 per cent. of the total.

Two circulars were early in 1926 issued to the Provinces setting forth in detail the approved plan of action for the Central and Provincial Committees. In pursuance of the proposals made in it permanent local Committees to administer the funds to be allotted to them from the head quarters and to direct and control the anti leprosy campaign in their respective provinces were formed and by the close of the year all the Provinces had constituted branches. In order to secure uniformity in certain broad principles relating to the anti leprosy campaign to be undertaken by the Provincial Committees and with a view to its conformity with the latest scientific information about the nature of the disease, the Indian Council issued in the early part of 1926 a Memorandum on the method of conducting the anti leprosy campaign in India. This document sought to bring out the following main points which according to the latest scientific researches should be the bases upon which all efforts ultimately to eradicate leprosy must rest —

(1) Pauper lepers form only a small fraction of the leper population, and the disease is common among all classes of the community

(2) Segregations is not the most appropriate method of dealing with lepers, for

(a) financially it would be impossible

(b) any attempt to impose forcible segregation would drive patients, particularly those who are suffering from the earlier stages of the disease, to conceal their misfortune and, as has been the case where such means have been adopted only the more advanced and obvious lepers would be segregated.

(3) The majority of the advanced cases are not highly infectious and are less amenable to treatment, while the early cases in which the disease has made but little outward manifestation can be controlled by treatment

(4) The strongest hope of stamping out the disease lies in providing facilities for the treatment of early cases.

The Indian Council therefore while it did not desire to minimise the usefulness of homes and asylums for the care of lepers strongly recommended that the efforts of the Provincial Committees should for the present, at least, be concentrated upon the establishment of dispensaries to serve the following objects —

(a) to induce patients to come forward at an early stage in the hope of recovery instead of hiding their malady till it becomes more advanced more infectious and less remediable and so

(b) to shut off the sources of infection as the number of infectious cases will continually tend to diminish and the opportunities for infecting the next generation will become fewer

The Provincial Committees have all placed this question of the training of doctors and the starting of treatment centres where facilities will be available for the proper diagnosis and treatment of the disease in the forefront of their programmes and their resources have in many cases been supplemented by local Governments by the grant of substantial financial assistance.

A general appeal for funds was made on the formation of the Indian Council and closed in January 1926. Realisations produced Rs 20 00 000. This was invested and forms the capital of the Association to which it yields an annual revenue of Rs 1 10 000.

CHILD WELFARE MOVEMENT

Amongst the most pressing problems of India's health is that presented by the appalling infant mortality. It has been calculated that every year no fewer than 2 million Indian babies die while many others survive only to grow weak and feeble from unhygienic surroundings during infancy. A noteworthy feature has been the further progress of the infant welfare movement, which owes much to the All India Maternity and Child Welfare League initiated by Lady Chalmers and also to the Indian Red Cross Society, which aims at gradually establishing a network of child welfare centres in most of the larger towns in India. The inauguration of an all India Baby Week, an undertaking to which Her Excellency the Governor of Bombay has devoted great and successful enthusiasm has also given a stimulus to the work and progress of an important personal aid to its progress. In all the vast centres of population, work is now being done for the training of midwives, for the instruction of mothers and for the care of babies. Training centres for Indian and Anglo-Indian women have been opened in order to spread the elements of infantile hygiene to other parts of India. Most hopeful signs of all, Indian ladies are beginning to interest themselves in this work in the numbers. But such is the magnitude of the

task that and consistent widespread effort on a scale hitherto impossible must be undertaken if any appreciable reduction is to be made in the appalling mortality of young children. The admirable work done year by year by the National Association for supplying Female Medical Aid to the Women of India is recognised by the Government of India which subsidises this organisation with a grant of Rs 3 70 000 a year for the maintenance of the Women's Medical Service of India.

Centres of Activity—The Child Welfare Directory gives the following list of places where the movement is already at work.

Bombay—The centre of much active and enthusiastic welfare work, the Lady Willington Maternity Home near the people's bazaar being unique of their kind in India. The Bombay Infant Welfare Society founded by Lady Lloyd has already established 8 Infant Welfare Centres where prenatal, maternal and child welfare work is being carried on.

Poona—The work carried out by the Serva Sadan Society of Poona deserves special mention in this connection. Child welfare centres have been established in several places throughout the Presidency and are in charge of Public

Health Nurses trained by the Seva Sadan Society. Certain of these Child Welfare centres are subsidized by the Bombay Branch of the Red Cross.

Surat.—The Henderson Ophthalmic Scheme for treating Ophthalmia Neonatorum and stemming the enormous amount of preventable and curable blindness that is laying its shadow over the health, happiness and usefulness of this great portion of our Empire.

Bijapur.—Mr Henderson I.C.S. has now started the same beneficent work for blind babies as in Surat.

Delhi.—Work was started in 1914 by two lady health visitors brought out from England by the Government of India. Their salaries are now met by the Delhi Municipality, a substantial grant being paid towards them by Government. Three infant welfare centres have been established and a comprehensive scheme for the training and supervision of indigenous *dais* is carried on. A training school for health visitors and midwife supervisors has been established in connection with this scheme and is financed by the Lady Chelmsford League. All particulars may be obtained from the Secretary Lady Reading Health School Vice-regal Institute Simla (and Imperial Secretariat, De li).

Madras.—Under the Provincial Branch of the Lady Chelmsford League and of the Red Cross Society a number of Infant Welfare Centres have been opened in the City also a school for training health visitors under Mrs Chinnappi M.B. the Medical Superintendent of the Co-operative Midwives Scheme by means of which trained midwives are provided for the City and much antenatal, maternity and infant welfare work is carried on. There are also local centres of both the Red Cross and the Lady Chelmsford League in the Madras mofussil.

Punjab.—The Punjab Branch of the Lady Chelmsford League was founded in 1921 and has established an Infant Welfare Centre and a school for training health visitors in Lahore under two health visitors brought from England. Its object is to establish child welfare centres with a trained health visitor in charge in each district.

United Provinces.—Infant Welfare centres exist in the following places—Agra, Allahabad Bareilly, Cawnpore, Dabra Dun, Gonda, Ghazipur Lucknow. Other places are also taking up the work and decrease in infant mortality is noted as a result of the work in many places.

Bengal.—Work is undertaken by the Corporation of Calcutta, and by the Indian Red Cross Society in that town. The latter body is now also financing a Health School for the training of

workers. A centre at Titagarh financed by The Duff & Co. Ltd. cares for the infants of the operatives in the Jute Mills. A flourishing centre exists at Dacca where excellent work is being done.

Sind.—Karachi has two trained Health Visitors as well as 8 nurses, and there is a large amount of maternity work. Hyderabad is noted specially for its work among indigenous midwives.

Central Provinces.—In Nagpur city the work is being carried on by the Municipality very successfully. The Red Cross has also opened a centre in Civil Lines.

Rajputana.—Ajmer is the only centre at present.

N.W.F.I.—Dera Ismail Khan has a flourishing work, much appreciated by the people. Peshawar centre has had to be closed for want of a suitable worker.

Baluchistan.—A centre was established in Quetta in 1922 and has done steady work.

Central India.—Indore has a centre financed by the Red Cross Society.

Bombay.—Has an enthusiastic Committee with two Health Centres.

Indian States.—The following have undertaken definite Child Welfare work while trained midwives are employed in a number of others: Kolhapur, Baroda, Jalpur.

So far all the schemes have devoted their attention to combating the prejudices of the mothers in respect of new born children. In a land of so many languages and superstitions progress will necessarily be slow and India has yet to decide whether she will work intensively and try to rear a few well developed children as far as adolescence or extensively attempt to bring a large number of infants through the first critical months only to have them perish at a later stage from the many ills that childhood is heir to in a land of great poverty under-nourishment, epidemics and famine. In Western lands the Child Welfare Movement has no more marked characteristic than its inability to stop expanding. Its ramifications know no bounds. Its inevitable corollaries are endless, and like the banyan tree it will no doubt in India also develop innumerable fresh roots: medical supervision, dental clinics, better housing, open air playgrounds etc. etc. But these are not yet its preliminary task. It is to educate the mothers of India to the enormity of allowing two million babies to perish every year and to convince them of the equally important fact that a high death rate always spells also a high damage rate of sickly under-developed incompetent citizens.

INDIAN RED CROSS SOCIETY

When the war first broke out, what is generally termed Red Cross work was undertaken in India and Mesopotamia by the St. John Ambulance Association and by a number of provincial organisations working on independent lines. From August 1916, the central work was taken over by the Indian Branch of the Joint War Committee of the Order of St. John of Jerusalem and the British Red Cross Society. The final

report of that Committee shows that up to June 1920 its total receipts amounted to Rs. 1,77,85,716 of which some 17 lakhs had been contributed by the British Red Cross Society. It had spent about 67 lakhs in Mesopotamia, nine lakhs on the Afghan War and War-torn Expedition in Mesopotamia and India combined it had spent on Red Cross objects in all about 117 lakhs.

It closed its career in June 1920 under the following circumstances. In the summer of 1919 an invitation had been received to join the International League of Red Cross Societies having for its object the extension of Red Cross work in the sphere of purely civil activity. Though there was then no formally constituted Red Cross Society in India the invitation was accepted thus giving India a distinct position in a world wide League of humanitarian societies. A Bill to constitute an Indian Red Cross Society was introduced by Sir Claude Hill in the Imperial Legislative Council in March 1920 and duly passed into law as Act XV of 1920. This Act handed over the balance of the Joint War Committee to the new Society, and authorised it not only to direct the utilisation for war purposes of the capital funds at its disposal but also to devote the interest as far as possible for civil purposes. As contemplated in the Act of Constitution of the Society its activities are completely de-centralised and are being carried on through twenty-two Provincial and State Branches under which there are numerous sub-branches.

The objects on which the funds of the Society may be spent are—

1 The care of the sick and wounded men of His Majesty's Forces whether still on the active list or demobilised.

2 The care of those suffering from Tuberculous, having regard in the first place to soldiers and sailors, whether they have contracted the disease in active service or not.

3 Civil welfare.

4 Work parties to provide the necessary garments etc. for hospitals and health institutions in need of them.

5 Assistance required in all branches of nursing, health and welfare work auxiliary to any organisations which have or may come into being in India and which are recognised by the Society.

6 Home Service Ambulance Work.

7 Provision of comforts and assistance to members of His Majesty's Forces, whether on the active list or demobilised.

The Society has five grades of subscribing Members namely, Honorary Vice-Presidents, Patrons, Vice-Patrons, Members and Associate Members. Their respective subscriptions are Rs 10,000 Rs 5,000 Rs 1,000, Rs 12 annually or a consolidated payment of Rs 150 and anything between Rs 1 and Rs 50 annually or consolidated payment of Rs 60.

Constitution—His Excellency the Viceroy is President of the Society. The Managing Body ordinarily consists of a Chairman to be nominated by the President and 25 members of the Society of whom 12 are the Vice Presidents nominated by Provincial or State Branches, 8 elected by the Society at the Annual General Meeting from among the members of the Society and 5 nominated by the President.

The present Chairman of the Managing Body is the Hon. Mr. Sir Henry Moncrieff Smith, Kt. C.B. 108 and the Organising Secretary Colonel Bhola Nauth, C.B. 118 (Retd.).

Finances—The operations of the Joint War Committee were brought to a close in June 1920 with a capital investment of the face value of Rs 56,33,000 and Rs 8,01,500 + 6 in floating and fixed deposit accounts. The Society has since invested further funds in various securities and its finances in the end of December 1928 stood at a capital investment of the face value of Rs 7,53,000 0 0. The income derived from the capital of the Society (which is \$4 lakhs at present) after providing for certain liabilities of the Central Society is distributable under the Act to the Provincial Branches in proportion to their contributions to the Central Our Day Fund. A sum of Rs 70,000-0-0 was so distributed to the Provincial Branches under this arrangement during the year 1928.

ST JOHN AMBULANCE ASSOCIATION. (Indian Council)

The St John Ambulance Association was founded in 1877 by the Order of the Hospital of St John of Jerusalem in England, and has for its objects—

(a) The instruction of persons in rendering first aid in cases of accidents or sudden illness and in the transport of the sick and injured.

(b) The instruction of persons in the elementary principles and practice of nursing and also of hygiene and sanitation, especially of a sick room.

(c) The manufacture and distribution by sale or presentation of ambulance material and the formation of ambulance depots in mines, factories and other centres of industry and traffic.

(d) The Organisation of Ambulance Corps, Invalid Transport Corps and Nursing Corps.

(e) And generally the promotion of instruction and carrying out of works for the relief of suffering of the sick and injured in peace and war independently of class, nationality or denomination.

An Indian Council of the Association was constituted in 1910. It has since issued 1,20,468 certificates of proficiency in First Aid, Home Nursing, Home Hygiene and Sanitation and 5,944 tokens such as Vouchers, Medallions,

Labels and Pendants for special proficiency in those subjects. The object of the Association is not to rival but to aid the medical man and the subject matter of instruction given at the classes qualifies the pupil to adopt such measures as may be advantageous pending the doctor's arrival or during the intervals between his visits.

In 1928 the Indian Council spent Rs 4,23,57 in furthering its objects and closed the year with Govt securities of the face value of Rs 70,000. The Association has five grades of members namely, Patrons, Honorary Councilors, Life Members, Annual Members and Annual Associates. Their respective subscriptions are Rs 1,000 Rs 500 Rs 100 Rs 5 and Rs 2.

Their Excellencies Lord and Lady Irwin and Field Marshal Sir William Birdwood as President, Lady President and Chairman respectively with 17 members form the Indian Council. The general business of the Indian Council is conducted by an Executive Committee of which the Hon. Mr. Sir Henry Moncrieff Smith, Kt. C.B., 108, is the Chairman and Colonel Bhola Nauth, C.B. 118 (Retd.) the General Secretary.

LUNACY AND ASYLUMS IN INDIA

The accommodation for mentally afflicted persons in British India is like that for those afflicted bodily very inadequate. In the Native States the condition of affairs as regards the provision of institutions for the care and treatment of the insane is still worse as no Asylums exist there at all so that those whose malady is such as to render their freedom a public nuisance are for the most part confined in the local jails.

According to the Census Reports of 1921 out of a total population of 318,942,440 (India

and Burma) there are 72,907 persons insane making a proportion of insane to sane of 3 per every 10,000.

In the United Kingdom the proportion of insane to sane is roughly 40 per 10,000 while in New Zealand it is as much as 45 per 10,000. In reviewing these figures it must be borne in mind that those of the United Kingdom and New Zealand include the feeble-minded an item that is not included in the figures for British India.

INDIA

Provinces States and Agencies		General population			Insane population		
		Male	Female	Total	Male	Female	Total
Provinces under British Administration.	British	139,243,124	131,70,310	271,940,434	44,673	28,234	72,907
States and Agencies		4,53,431	3,230,616	4,764,047	9,478	5,520	15,398
Total for all India		163,996,554	164,946,926	318,942,480	64,151	34,154	88,305

For the care of the 88,805 insane of India and Burma, there exists accommodation in Asylums for roughly 97,12 hence only one person in ten out of the total insane population of the country can be afforded accommodation in the institutions that exist especially for their care and treatment.

The following table gives the number of Lunatic Asylums in each province during 1924

the total population of such institutions in each province and the number discharged cured and died.

The number of a yuma has not changed

There has been a decrease in the admissions and re-admissions during the year largely accounted for by the decrease in the admissions of military insane.

Province	No. of Mental Hospitals	Admitted and readmitted during the year	Total Population of Mental Hospital			Discharged cured	Died	Daily average		Criminal Lunatics	
			Males	Female	Total			Strength	Sick		
Bengal	4	2,4	290	173	1,12	81	5	97.05	59.01	568	
Assam	1	70	110	97	207	4	22	430.97	332.78	220	
Bihar and Orissa	1	70	300	54	354	3	3	201.61	94.20	159	
United Provinces	3	296	1,201	809	1,600	172	148	1,237.16	204.8	1,235	
Punjab	1	322	629	264	1,193	144	99	870.27	304.17	187	
Central Provinces	1	99	346	93	439	80	17	361.94	117.0	172	
Bombay	6	536	5,529	4,3	2,002	240	150	1,484.6	66.8	278	
Madras	3	1,337	953	812	1,290	140	107	941.08	125.47	190	
Burma	1	204	934	166	1,150	78	103	944.76	117.98	433	
Total	1923	22	2,133	7,790	1,950	9,640	972	629	7,605.23	780.90	2,431
	1924	22	2,157	7,771	1,941	9,712	1,017	676	7,805.94	738.68	2,501

The administration of Asylums is under the direct control of the Provincial Administrative Medical Officers. In the case of the so-called "Central" Asylums, that is to say the Asylums at Madras, North Yeravda (Bombay Presidency), Lahore (Punjab) Agra (United Provinces of Agra and Oudh) Berhampore (Bengal) and Rangoon (Burma) as well as the Asylum at Ranchi the charge of the institution is in the hands of a whole-time medical officer who is termed the Superintendent. He is usually but by no means always, a trained alienist. The remaining Asylums are in the charge of the Civil Surgeon of the locality in which they happen to be situated. Not one of the existing Asylums in British India can be said to be up-to-date as regards construction, organisation, staffing or equipment. In every instance even including the new Asylum for Burma which is now under construction in Rangoon the custodial aspect of the institution has received the greatest amount of consideration with the result that only a very little attention has been paid to all that goes towards the remedial requirements of the institution. It will probably take some years yet to obtain in India proper recognition of the fact that an Asylum for persons suffering

from mental diseases should be a "hospital" in every sense of the term hence its main raison d'être is to treat and to cure, and that every other consideration must be made secondary to this fundamental concept. Indeed in almost every country in the world which makes any pretension to be regarded as civilised the term Asylum has now been abolished for all institutions dedicated to the care and treatment of the insane. Owing to the lack of interest in Psychiatry and all that this term generally connotes in Europe and America the nomenclature that is still followed in the classification of mental diseases renders all official returns that are supposed to deal with the types of insanity occurring in the various Asylums in India, comparatively worthless. Even were a less obsolete classification of the varieties of mental diseases introduced it would not be possible in the existing absence of properly trained alienists to render information that would be of any great statistical value from a psychiatric stand point.

The following table shows the classification of the types of insanity recorded in the reports published by every Province in India in the year 1924-25

The principal types of insanity treated during the year 1924-25 in the Lunatic Asylums in the Provinces of—

	Bengal	Assam	Bihar & Orissa	United Provinces	Bombay	Madras	Punjab	Central Provinces	Burma
Idiocy	24	5	12	128	100	61	125	3	63
Mania	304	217	144	463	650	341	195	229	432
Melancholia	139	188	29	165	361	160	79	96	290
Epileptic Insanity	80	21	27	100	93	69	77	30	81
Other forms of Insanity	383	74	126	657	381	487	231	36	197
Dementia	433	-	70	167	437	278	486	16	126

It will be seen from the foregoing that the largest number of cases in the Asylums are shown as Mania and Melancholia. These terms Mania and Melancholia are nowadays regarded as obsolete. For purposes of comparison of the terms that are nowadays employed to distinguish psychopathic states with those that are still permitted to hold good in India the following extract has been made from a recent report published by the Union of South Africa:—

Infection Psychoses.
Exhaustion Psychoses.
Intoxication Psychoses.
Thyroidogenic Psychoses.

Dementia Præcox.
Dementia Paralytica.
Organic Dementias.
Involution Psychoses.
Manic-depressive Psychoses.
Paranoia.
Epileptic Psychoses.
Psychogenic Neurosis.
Constitutional Psychopathic State.
Psychopathic Personalities.
Defective Mental Development.

As regards the incidence of insanity among the various races of India as well as the incidence of insanity in relation to occupation no really reliable information is obtainable in view of the comparative paucity of cases in proportion to the general population that come under observation. On the other the incidence by age is shown fairly well in the Census Report of 1911 to be as follows

INDIA

AGE.	Insane.		Distribution of the insane by age per 10 000 of each sex	
	Male.	Female.	Male.	Female.
YEARS				
0-5	8..	484	102	139
5-10	2,905	1,882	547	506
10-15	4,098	2,733	893	876
15-20	4,366	3,016	940	1,025
20-25	5,518	3,379	1,118	1,095
25-30	5,881	3,58..	1,270	1,013
30-35	7,21	3,849	1,316	1,126
35-40	5,601	2,940	916	790
40-45	5,516	3,436	960	996
45-50	3,332	2,167	514	571
50-55	5,13..	2,492	555	706
55-60	1,465	1,036	239	297
60-65	1,683	1,411	567	786
65-70	602	439		
70 and over	1,070	1,008		
unspecified	270	133		
Total for all India	54,151	34,134		

A further result of the general apathy, both official and non-official, towards matters pertaining to psychiatry, the subject of 'feeble-mindedness' has not yet come to be recognised as one that has any practical bearing on the welfare of the state as a whole with the result that there is no official institution for the care and education of feeble-minded children.

As regards the relation of insanity to crime, and more especially as regards the confinement of criminal lunatics in jails this report of the re-

cent Commission of Enquiry into the subject of Indian Jails (published in 1920) contains some valuable suggestions. As things are the ideas both as regards the theory and the practice of dealing with insanity and crime in India, embodied in the existing legislation can only be described as archaic.

(See also "Insanity in India" by Colonel G. & W. Ewens, I.M.S. and "Lunacy in India" by Major A. W. Overbeck Wright, M.D., D.P.S., I.M.S.)

The Women's Medical Service for India.

This Service is included in the National Association for supplying medical aid by women to the women of India generally known as the Countess of Dufferin's Fund and is administered by the Executive Committee and Council of that Fund. The Government of India has so far allotted the sum of £25,000 per annum towards its maintenance. The present sanctioned cadre is forty-four first class medical women with a training reserve of 8 women graduates in medicine of Indian Universities. Recruitment of the service is made (a) in India by a medical sub-committee of the Council which includes the Director General, Indian Medical Service the Honorary Secretary to the Council and the Chief Medical Officer Women's Medical Service (b) in England, by a sub-committee, including a medical man and two medical women conversant with conditions in India. These sub-committees perform the duties of a medical board examining candidates for physical fitness and for return to duty after invaliding.

The Council determines what proportions of the members of the Service is to be recruited in England and in India respectively in the original constitution of the Service duly qualified medical women who are in the service of or who have rendered approved service to the Countess of Dufferin's Fund are to have the first claim to appointment and thereafter special consideration is to be paid to the claims of candidates who have qualified in local institutions and of those who are natives of India.

Qualifications.—The qualifications are that the candidate must be (a) a British subject resident in the United Kingdom or in a British Colony or in British India, or a person resident in any territory of any Native Prince or Chief under the suzerainty of His Majesty, exercised through the Governor General of India or through any Governor or other officer subordinate to the Governor General of India. (b) Must be between the ages of twenty-four and thirty at entry. (c) She must be a first class medical woman i.e. she must possess a medical qualification registrable in the United Kingdom under the Medical Act, or an Indian or Colonial qualification registrable in the United Kingdom under that Act but this condition does not apply at the original constitution of the Service to medical women in charge of hospitals who in the opinion of the Council are of proved experience and ability. (d) The candidate must produce a certificate of health and character. But the Council reserves the power to promote to the service ladies not possessing the above qualifications, but who have shown marked capacity. Members of the Service are required to engage for duty anywhere in India. After one year of probation has been satisfactorily passed their appointments are confirmed. The services of officers may be lent to Local or Municipal bodies, or to special institutions which may be responsible for whole or part of the pay.

Pay.—The rates of pay are as follows—
1st to 3rd year Rs 450 per month
4th to 6th " " 500 "

	7th to 9th year	Rs	550 per month
10th to 12th	"	600	"
13th to 16th	"	650	"
16th to 18th	"	700	"
19th to 21st	"	750	"
22nd to 24th	"	800	"
25th and after	"	850	"

also an overseas allowance of Rs 100 per month to those below 12 years service and Rs 150 per month to those of 12 years service and over. But no member can be confirmed in the 500 rupee grade unless she has passed an examination in such vernacular as the Provincial Committee shall prescribe. In addition furnished quarters are provided free of rent or a house rent allowance to be determined by the Provincial Committee may be granted in lieu of it.

Officers of the Service are permitted to engage in private practice provided it does not interfere with their official duties, and the Provincial Committee has the power to determine whether such duties are thus interfered with. Except in very special cases retirement is compulsory at the age of fifty-five. An officer whose appointment is not confirmed or who is dismissed is granted an allowance sufficient to pay her passage to England.

Leave Rules.—(a) Casual Leave which is occasional leave on full pay for a few days, and is not supposed to interrupt duty. (b) Leave on average pay is granted up to 211 of an officer's period on duty according to Pundamental Rules. More than eight months leave on average pay is not granted at one time. (c) Study leave may also be granted up to twelve months during the whole service. An allowance of 12 sh per day is granted in addition to the average pay during study leave. (d) Extraordinary leave at any time at the discretion of the Executive Committee. (e) Leave not due may be granted subject to the following conditions—(i) on medical certificate without limit of amount and (ii) otherwise than on medical certificate for not more than three months at any one time and six months in all reckoned in terms of leave on average pay. (f) The maximum period of continuous absence from duty on leave is granted otherwise than on medical certificate is 12 months. (g) When an officer returns from leave which was not due and which was debited against her leave account no leave will become due to her until the expiration of a fresh period spent on duty sufficient to earn a credit of leave equal to the period of leave which she took before it was due. There are no allowances during extraordinary leave. A doctor appointed in England receives a sum of £100 to cover her passage and incidental expenses. There are also allowances to cover the cost of journeys by rail and road.

There is also a Provident Fund, each member contributing monthly thereto ten per cent of her salary the Association contributing an equal amount and each subscriber's account being granted interest on the amount standing to credit at the rate of 4 per cent per annum, or at such rate as the Council can invest without risk to the funds of the Association.

The officer loses her contributions if she remains (except on account of ill health) before completing five years' service or in the event of dismissal. On retirement after approved service the sum which has accumulated to the credit of the subscriber is handed over to her.

FREE PASSAGES—Officers of the Women's Medical Service are granted free return passages corresponding to those granted under the Lee Concessions to officers of all India services. The maximum number of return passages granted during an officer's entire term of service must not exceed four the first falling due after 4 years' service.

Lady Hardinge Medical College and Hospital—The Lady Hardinge Medical College was opened by Lord Hardinge on the 17th February 1916. It is a residential Medical College staffed entirely by women and was founded to commemorate the visit to Delhi, in 1911 of the Queen Empress. Lady Hardinge took the initiative in raising funds by public subscription to meet the cost of buildings and equipment. Thirty lakhs of rupees in all have been given for these purposes mostly by the Ruling Princes and Chiefs of India. After Lady Hardinge's death in 1914 it was suggested by Her Imperial Majesty Queen Mary that the institution should serve as a memorial to its founder and be called by her name.

The Governing Body includes the Director General Indian Medical Service, the Chief Commissioner of Delhi, the Chief Engineer Delhi Province, the Educational Commissioner with the Government of India, the Chief Medical Officer Women's Medical Service, a representative elected by the All India Association of Medical Women and the Surgeon to H. E. the Viceroy. The Honorary Secretary who is also a member of the Governing Body is the Deputy Secretary in the Department of Education, Health and Lands. The Deputy Accountant-General Central Revenues acts as Honorary Treasurer.

The College and Hospital together with separate hostels for 100 Medical students and 70 nurses and residences for the medical and teaching staff occupy a site of 55 acres in New Delhi (Nasirina) within easy reach of the old city. The grounds are enclosed and adequate provision is made for the seclusion of both students and patients from outside observation. Strict observance of purdah cannot however be guaranteed in the case of students. As the

hospital patients are all women or children, it is for example, necessary that students should, in their final year attend a brief course of instruction on men patients at the Civil Hospital Delhi. The College buildings contain a Library Museum, Lecture Rooms, Laboratories and offices. Hostels are provided for Hindu, Moslem, Sikh and Christian students. The hospital is a fine modern building with accommodation for 300 in-patients and a commodious out-patients department. The College and Hospital are supported by a grant of Rs. 3,11,000 from the Government of India, supplemented by grants from Provincial Governments and Indian States. Students are prepared for the Intermediate Science Examination, and the M.B. B.S. degree of the Punjab University with which the College is affiliated.

SENIOR STAFF

Principal and Professor of Midwifery and Gynaecology—Miss C. J. Campbell M.D. Ch.B. (Glas.) Women's Medical Service.

Vice-Principal and Professor of Surgery—Miss E. Peil M.B. B.S. (Lond.) W.M.S.

Professor of Medicine—Miss N. E. Trouton M.B. B.S. (Lond.) M.R.C.P. D.T.M. Calcutta.

Professor of Ophthalmology—Miss R. Boulton M.B. Ch.B. (Glas.) D.O. (Oxon.) W.M.S.

Professor of Pathology—Miss L. S. Chatterji M.B. Ch.B. (Aberdeen) D.P.H. (Cambridge).

Professor of Anatomy—Miss K. J. McDermott M.B. B.S. (Punjab) W.M.S.

Professor of Physiology—Mrs. Munday M.B. Ch.B. (Liverpool) W.M.S.

Lecturer in Physics and Mathematics and Superintendent of the Science Department—Miss J. H. Ross M.A. B.Sc. (Glas.).

Lecturer in Chemistry—Miss Sothiella Ram M.A. (Cantab.).

Lecturer in Biology—Miss C. O. Burt B.Sc. (Edin.).

Lecturer in English—Mrs. (Cotton) M.A. Manchester.

Bursar and Warden—Miss M. W. Jesson, M.A. (Cantab.).

Attached to the Hospital there are (1) a Training School for Nurses and (2) a Training School for Dispensers. All particulars as to admission and training may be obtained in the case of (1) from the Nursing Superintendents, Lady Hardinge Medical College Hospital, Delhi, and in the case of (2) from the Lecturer on Pharmacy, at the same address.

THE COUNTESS OF DUFFERIN'S FUND

The National Association for Supplying Medical Aid by Women to the women of India was founded by the Countess of Dufferin in 1889, the object being to open women's hospitals and women's wards in existing hospitals to train women doctors, nurses and midwives in India, and to bring these out when necessary from Europe. An endowment fund of about 6 lakhs was obtained by public subscription. In addition Branches were formed in each Province, each Branch having its own funds and each having a number of Local Committees and Zenana Hospitals affiliated to it.

The Central Fund gives grants in aid to several Provincial Branches; it gives scholarships to a

number of women students at the Medical schools of Bombay, Calcutta, Madras and Delhi; it gives post-graduate scholarships for study in the United Kingdom. It has in the past brought from England a certain number of European medical women. It has assisted by grants in aid the building of a number of zenana hospitals in different parts of India. It has affiliated to it 13 Provincial Branches and a number of Local Committees.

The Government of India subsidize the Countess of Dufferin's Fund to the extent of Rs. 3,70,000 per annum to maintain a Women's Medical Service for India—this service consists of 44 officers, with a training reserve of 8 doctors

and a Junior service of 17 assistant surgeons. Medical women either British or Indian holding registrable British qualifications are eligible for the senior service.

The President is H E Lady Irwin or The Hon Secretary is the Surgeon to H H, the Viceroy and the Secretary Dr A C Scott C M O W M S.

The Victoria Memorial Scholarship Fund was organised by Lady Curzon in 1902, in order to

secure a certain amount of improvement in the prevailing state of India. A sum of about 64 lakhs was obtained by public subscription, and centres were organised in each Province to carry out the objects of the Fund. Over 2,000 midwives have been trained in addition to large numbers who have been partially trained. Of late years the Fund has done much to pave the way for the registration and supervision of indigenous dais. It has also done much propaganda work.

NATIONAL ASSOCIATION FOR SUPPLYING MEDICAL AID BY WOMEN TO THE WOMEN OF INDIA.

Amalgamation of Administration—At a general meeting held in Simla in July 1923 it was decided that the administration of the Funds for the physical welfare of Indian women under the Presidency of the Viceroy's wife should be administered by a single committee and with identical rules. These funds are the Countess of Dufferin's Fund Women's Medical Service for India, Victoria Memorial Scholarship

Fund Lady Cheshamford All India Maternity League and Lady Headley Women of India Fund. The President of the Amalgamated Committee is H E the Lady Irwin and the Hon and Joint Secretaries are respectively Lt Col Norman Walker I.M.S., Surgeon to the Viceroy and Dr A C Scott W.M.S. The Hon Treasurer is Sir Frederic Gauntlett.

NURSING

Whilst India cannot show the complete chain of efficiently-nursed hospitals which exists in England, there has been a great development of skilled nursing of recent years. This activity is principally centred in the Bengal, Madras and Bombay Presidencies, where the chief hospitals in the Presidency towns are well nursed, and where large private staffs are maintained available to the general public on payment of a prescribed scale of fees. These hospitals also act as training institutions and turn out a yearly supply of fully trained nurses, both to meet their own demands and those of outside institutions and private agencies. In this way the supply of trained nurses, English, Anglo-Indian and Indian is being steadily increased. In Bombay the organisation has gone a step farther through the establishment of the Bombay Presidency Nursing Association, c/o St George's Hospital Bombay. This is composed of representatives of the various Nursing Associations in charge of individual hospitals and works under the Government. The principle on which the relations of this Association with the Local Associations is governed is that there shall be central examination and control combined with complete individual autonomy in administration.

State Registration of Nurses for all India is much required. A meeting was held in Bombay in 1923 when Nurses from the Presidency met to discuss the question. It is desired that India should have its own State Register as in the United Kingdom South Africa New Zealand, Australia Canada and Burma and that the curricula and examinations should be brought into line with these countries. Government has proposed to establish a Provincial Register preparatory to an All-India Register.

Nursing Bodies—The Secretary of the Calcutta Hospital Nurses Institution is Mr A R Nicholson Allahabad Bank Buildings, Calcutta. The names and addresses of the other Nursing bodies in Calcutta are Lady Minto's Indian Nursing Association (Bengal Branch), 4, Hun-

gerford Street Lady Rogers' Hostel for Indian Nurses 144 Russa Road South Nurses Academy 6 Suburban Hospital Road and Nurses Bureau, 37 McLeod Street. In Madras there is the General Hospital, with a staff of 82 nurses the Government Maternity Hospital the Caste and Gosha Hospital at Kilpank, the Royappa Hospital and the Ophthalmic Hospital also the Lady Amphilil Nurses Institute and the South Indian Nursing Association (now amalgamated) (President Her Excellency Lady Godan). The Association has under its management—The Lady Amphilil & Co. Private Institute Western Castle Mount Road Madras. Fully trained and experienced nurses for all cases of illness both among Europeans and Indians always available. The Lady Wellington Nursing Home Western Castle Mount Road Madras and Nurses Nursing and Convalescent Home Ootacamund for Medical Surgical and Maternity cases. The Nigiri Nursing Home affords admirable facilities for convalescents.

Bombay Presidency—The Bombay Presidency was amongst the first in India to realise the value of nursing in connection with hospital work. The first steps were taken on the initiative of Mr I. R. W. Forrest at St George's Hospital, Bombay where a regular nursing cadre for the hospital was established together with a small staff of nurses for private cases. This was followed by a similar movement at the J J and Alfred Hospitals and after wards spread to other hospitals in the Presidency. Ultimately the Government laid down a definite principle with regard to the financial aid which they would give to such institutions agreeing to contribute a sum equal to that raised from private sources. Afterwards as the work grew it was decided by Government that each nursing association attached to a hospital should have a definite constitution and consequently these bodies have all been registered as Associations under Act 21 of 1880. By degrees substantial endowments have been built up, although the Associations are still largely dependent upon annual subscriptions.

towards the maintenance of their work. The Associations are as follows —

St George's Hospital Nursing Association
Hon Secretary F B Thornely Esq
Bombay

Jamsetji Jijibhoy Hospital Nursing Association,
Bombay Hon Secretary Dr M V
Mehta F.R.C.P.

Gonaldas Tejpal Hospital Nursing Association
Hon Secretary G A Thomas Esq
108 Old Custom House Bombay

Cama Hospital Nursing Association Bombay
Hon Secretary H C B Mitchell,
Esq

Seasoon Hospital Nursing Association
Poonas Hon Secretary A C Wild Esq
I.C.S.

Karachi Civil Hospital Nursing Association,
Karachi Hon Secretary H H
Hood Esq

Nasik Civil Hospital Nursing Association
Hon Secretary Civil Surgeon, Nasik

Ahmedabad and Lely Memorial Nursing
Association Ahmedabad Hon Secretary
Civil Surgeon Ahmedabad

Bijapur Civil Hospital Nursing Association
Hon. Secretary Civil Surgeon Bijapur

Dharwar Civil Hospital Nursing Association
Hon. Secretary Civil Surgeon
Dharwar

Prince of Wales Nursing Association Aden
Hon Secretary E Somerville Murray
Esq Aden

Kanara Nursing Association Karwar Hon
Secretary D S Dhavi Esq Karwar

Voluntary Nursing Association Sholapur
Hon Secretary Civil Surgeon Sholapur

Dyramjee Jeejibhoy Hospital Nursing
Association Mathuran. Hon Secretary
Lt.-Col B B Paymaster I.M.S.

Ahmednagar Civil Hospital Nursing Association
Ahmednagar Hon. Secretary
Civil Surgeon

Panch Mahals Nursing Association
Godhra Honorary Secretary Civil Surgeon

After further experience it was felt that it is undesirable to have a considerable number of detached and independent nursing associations training and certifying nurses without any common standard of entrance examination or certification. It was therefore decided to establish the Bombay Presidency Nursing Association which came into existence in the year 1910.

The principle on which the Bombay Presidency Nursing Association works is a central system of examination certification registration and control. It is now the only nursing, examining, registering and certifying body in the Bombay Presidency. At the same time, the local associations retain entire charge of their local funds excepting Provident funds which have been transferred to the Central fund, and also entire control of the nurses when they are in their

employment. Proposals are now before Government for absorbing the personnel of the local associations into a Presidency Nursing Association. This will not however affect the individuality of local associations which will continue to control their own funds and to exercise control over local establishments, subject in the latter case to such limitations as a revision of the nature in question will require.

The Association commenced its operations on the 1st April 1911. The institutions recognized under the by laws for the training of nurses at present are—St George's Hospital, J J Hospital, Cama and Albion Hospital, Bai Modlalal Hospital, Bombay, Huttlings and Premabai Civil Hospital, Ahmedabad, Civil Hospital, Belgam, Moradbad, Vrijbhukhandas Hospital, Surat, Karachi Civil Hospital, Karachi, Seasoon Hospital, Poonas, State General Hospital, Baroda, King Edward Memorial Hospital, Sholapur, V J Hospital, Ahmedabad, Civil Hospital, Nasik, Dufferin Hospital, Karachi, King Edward Memorial Hospital, Parcel, Bombay, Zeenana Mission Hospital, Bombay and the following for the training of Midwives: M V Hospital, Civil Hospital, Surat, Victoria Jubilee and King Edward VII Hospital, Ahmedabad, Bai Motilal Hospital, J J Hospital, Cama and Albion Hospital, Bombay, Dufferin Hospital, Karachi, Seasoon Hospital, St. Margaret's Hospital, King Edward Memorial Hospital, Poonas, Civil Hospital, Belgam, Dufferin Hospital, Sholapur, Wadia Maternity Homes, Supari Bag, Parcel, Bombay, (11) Hospital, Ahmedabad, Civil Hospital, Nasik, King Edward Memorial Hospital, Sholapur, Arbathal, Giribahal, Maternity Home, Ahmedabad, Zeenana Mission Hospital, Broach.

Provision for retiring allowances is made for all members on the basis of a Provident Fund and a Nursing Reserve has been established for employment in emergencies such as war pestilence or public danger or calamity.

Address—The Secretary, Bombay Presidency Nursing Association, Secretariat, Bombay.

Lady Minto's Indian Nursing Association—In 1906 this Association was inaugurated replacing the Punjab and Up country Nursing Association for Europeans in India which Society established in 1892 had accomplished much useful work in this country. Owing, however to lack of funds it was found impossible to continue its administration and to carry out the expansion of the work so urgently called for. The names of the helpers identified with the premier Association to whom the public must ever be indebted are the Hon Lady Lyttleton, Lady Helen Munro Ferguson and Mrs Cottrell while Mrs. Sheppard, by her indefatigable efforts, is truly entitled to be regarded as the pioneer of a trained nursing system throughout the greater part of India. The late Lady Curzon worked energetically to provide an enlarged Nursing organization, but mainly owing to financial reasons she was unable before she left India to bring the scheme to fruition. The Home Committee of the existing Association, recognizing the need for expansion consented to take over the present Association and approached Lady Minto before she left England in 1905 for co-

operation towards this project and after much consideration and discussion with the Government of India, Lieut. Governors and Commissioners of Provinces, the present Association was established. An appeal by Lady Minto addressed to the public both in England and India, was responded to most generously and sufficient funds were collected to form an endowment fund which has in spite of fluctuations increased a little with time. The assistance of a Government grant is much valued, as it enables Homes for the Sisters to be kept up in six Provinces in India and in Burma. At the request of the Home Committee the enlarged Association was renamed the Lady Minto Indian Nursing Association.

The duties of the Home Committee are, as before, largely concerned in dispatching—as required—suitably trained and carefully selected Nurses for service on the staff of the Association in India. Thus Europeans who are members of this Association are enabled to obtain skilled nursing at moderate charges on a sliding scale of fees determined by the income of each patient. The boon of obtaining good nursing at moderate terms is much appreciated, the rates of subscriptions being really an insurance against illness.

Her Majesty the Queen is a Patron of the Association. Her Excellency The Lady Irwin is President of the Central Committee in India.

Hon. Secretary Lt.-Colonel Hay Thorburn, I.M.S.

Hon. Treasurer W. J. Lister Esq., O.P.R. C.I.E.

Chief Lady Superintendent Miss G. Beckett. Address—Central Committee, L.M.I. N.A. Victoria Lodge Simla or Delhi.

Hon. Secretary Home Committee: Lt.-Col. Sir Warren R. Crooke-Lawless O.B. O.M. O.M. LL.D., House Governor Osborne, Isle of Wight.

Secretary Home Committee Miss M. E. Ray B.R.C. 54 Ashburnham Mansions, Chelsea.

Nurses Organizations—The Association of Nursing Superintendents of India is now amalgamated with the Trained Nurses Association of India and has the one set of officers. The Trained Nurses Association of India and the Association of Nursing Superintendents of India are not Associations to employ or to supply nurses but are organizations with a membership wholly of nurses with the avowed objects of improving and unifying nursing education, promoting esprit de corps among nurses, and upholding the dignity and honour of the nursing profession. The Associations have a membership of 472 (including nurses trained in ten or more different countries: Europeans, Americans, New Zealanders, Australians and Indians). The Association of Superintendents was started in 1905 as the Association of Nursing Superintendents of the United Provinces and the Punjab but by the next year its membership had spread over the country to such an extent that the name was changed to include the whole of India. The Trained Nurses Association was started in 1908 and a monthly Journal of Nursing began to be published by the two Associations in February 1910. The Associations are affiliated with the International Council of Nurses.

President Mrs. G. D. Franklin 33, Rajpur Road, Delhi.

Hon. Secretary and Treasurer Miss Gadsden General Hospital Madras.

THE WOMAN SUFFRAGE MOVEMENT

Within the abnormally short period of nine years the Woman Suffrage movement has risen in India, swept through the country sympathetically and achieved the political enfranchisement of women in six of its most progressive Provinces and in four Indian States.

Three fundamental causes have led to this remarkable success: first, the deep veneration that is given by the Hindu and Mohammedan religions to the feminine aspect of life equally with the masculine as shown by the importance of goddesses, by the necessity for the presence of the wife at all ceremonies performed by a Brahmin by the idea of the sacred mystery of womanhood implied by the purdah, and by the general veneration of motherhood. Secondly, the mind was psychological for a new era was beginning for the Indian people by the introduction of a Scheme of Reforms in Indian government which was planned to give a basis of representative government on a much extended scale. The door was being opened to complete self-government but only men were

being invited to enter through it, although women compose half the people of the country and it had been by the joint efforts of men and women that the agitation for reform in the government had been made. The men and women of India were too awakened and too just to allow this injustice to remain unredressed. Thirdly, the long and strenuous agitation for the vote by women in Britain and America and their recent victories had brought vividly to the consciousness of all educated Indian men and women the whole question of the inclusion of women in public life and it was also a national and international necessity that Indian women should be given as high a status as women in other parts of the Empire.

Though the Municipal franchise had been granted to the women of the Bombay and Madras Presidencies over fifteen years ago it was so limited in numbers that it did not make a large impact on women's consciousness and indeed no protest was made when it was suddenly withdrawn from Madras women some years later. Over 1700 women are qualified

to vote for the Bombay Corporation and a fair percentage of these have polled at each election and similarly in other Municipalities in that Presidency women have exercised their vote responsibly and intelligently. Since 1922 twenty-two women have become Municipal Councillors and members of Local Government Boards, four of whom were elected by Bombay City voters the others having been nominated.

It was owing to the rise of the political agitation for Home Rule between 1914 and 1917 that women began to wake up to their position of exclusion by British law from any share in representative government. The internment of one of their own sex Dr Besant stimulated political activity and political self-consciousness amongst women to a very great extent. The moment for the ripe public expression of their feelings came when the Secretary of State for India came to India to investigate and study Indian affairs at first hand in 1917.

During the Hon. E. S. Montagu's visit only one Women's Deputation waited on him but it was representative of womanhood in all parts of India and it brought to his notice the various reforms which women were specially desirous of recommending the Government to carry out.

The first claim for women suffrage for India was made in the address presented to Mr. Montagu at this historic All India Women's Deputation which waited upon him in Madras on the 18th December 1917. The section referring to enfranchisement merits full quotation.

Our interests as one half of the people are directly affected by the demand in the united (Hindu Muslim Reform) scheme (1. 8) that the Members of the Council should be elected directly by the people on as broad a franchise as possible and in the Memorandum (3) that the franchise should be broadened and extended directly to the people. We pray that when such a franchise is being drawn up women may be recognized as people and that it may be worded in such terms as will not disqualify our sex, but allow our women the same opportunities of representation as our men. In agreeing with the demand of the abovementioned Memorandum that a full measure of Local Self Government should be immediately granted, we request that it shall include the representation of our women a policy that has been admittedly successful for the past twenty years in Local Self Government elsewhere in the British Empire. The precedent for including women in modern Indian political life has been a marked feature of the Indian National Congress, in which since its inception women have voted and been delegates and speakers and which this year finds its climax in the election of a woman as its President. Thus the voice of India approves of its women being considered responsible and acknowledged citizens and we urgently claim that in the drawing up of all provisions regarding representation, our sex shall not be made a disqualification for the exercise of the franchise or for service in public life."

The year 1919 was devoted to converting the Government forces to the justice and expediency of Indian Woman Suffrage but this proved a more difficult matter. It was a disappointment first that though the Secretary of State had given a sympathetic reply to the All India Women's Deputation yet when the Scheme of Reforms drawn up by him and Lord Chelmsford as the outcome of his visit to India, was published no mention of women was made though the widening of the electorate was one of the reforms suggested. When the Southborough Franchise Committee was formed to investigate the suggestions regarding the franchise in this Scheme the women suffragists took every means to bring to the notice of the Committee all the evidence which showed the need for and the country's support of the inclusion of women in the new franchise.

After the introduction of the Government of India Bill into Parliament in July 1919 a number of Indian deputations proceeded to London to give evidence before the Joint Select Committee of Members of both Houses of Parliament which had been appointed to place the Reforms on a workable basis. Mrs. Annie Besant, Mrs. Sarojini Naidu and Mrs. and Miss Harabai Tata were the women who were heard by the Committee in support of the extension of the franchise to women in India.

The House of Commons decided that the question was one for Indians to answer for themselves and while retaining the sex disqualification in the Reform Bill they framed the Electoral Rules in such terms that if any Provincial Legislative Council should decide by a resolution in favour of women's franchise women should be put on the electoral register of that Province. This was the only provision regarding franchise matters which might be changed before a 10 years time limit. Until after that period women were ineligible for election as Legislative Councillors.

Travancore a very progressive Indian State was the first to grant the Legislative vote to women at the close of 1920 and it was promptly followed by the Indian State of Jhalawar. In the first session of the Legislative Council in 1921 it is gratifying to record that a motion was tabled by Dewan Bahadur Krishnan Nair of Malabar that he would bring forward a Resolution in the Madras Legislative Council to remove the disqualification of sex existing in regard to the Legislative Council franchise. During the month that must legally intervene between the tabling of a Woman Suffrage motion and its introduction for Debate the Madras women under the leadership of the Women's Indian Association carried on all forms of public propaganda and canvassed the important members of the Council. The Debate took place on April 1st and after a short discussion in which it was evident that opposition came only from the Muhammadan members the debate itself became only an accumulation of appreciation of womanhood and an expression of faith in its future when the division was taken it resulted in the resolution being carried by a majority of 34. Madras has thus the honour of being the first Province in British India to enfranchise its women, and it has done so ungrudgingly and

unhesitatingly in the broad spirit of the equality of the sexes, as it grants the vote to women on the same terms as it has been granted to men.

Mr Trivedi brought forward a Woman Suffrage Resolution in the Bombay Legislative Council during the same session but some irregularity in its wording caused it to be pronounced out of order. In June that subject was tabled again and championed by Rao Sahab Harilal Desai, Harilal Desai of Ahmedabad, Deputy President of the Council. As in Madras, the intervening month was filled with suffrage activity by the women of the Presidency and was remarkable for a large joint meeting of Bombay city women at which 19 Women's Societies took part and for a suffrage meeting of Marathi and Gujarati women in Poona when over 800 women showed the greatest enthusiasm for the movement.

The Bombay Council Debate on Woman Suffrage took three days and the subject was very fully discussed by over 40 members. The result was satisfactory to the suffragists the voting being 52 in favour, 25 against and 12 neutral. Thus Madras and Bombay Presidencies gave the lead to the other Provinces. In September 1922 Mr. M. Bose in the Bengal Council moved a Woman Suffrage Resolution which was debated for three days but finally defeated by 56 to 37 votes. A bloc of 40 Muhammadan members voting solidly against it. In September 1925 the Bengal Council passed the Suffrage Resolution by a vote of 54 to 38.

Mr Devaki Prasad Sinha's similar Resolution in the Behar and Orissa Legislative Council was defeated by only a 10 votes majority.

These Debates proved so educational to their respective Provinces that the Bengal and Behar Provinces have since granted qualified women the Municipal vote.

In February 1923, a world suffrage record was made by the unanimous vote of the United Provinces Legislative Council in favour of Woman Suffrage.

In 1926 the Punjab granted woman suffrage without a division, thus there now remain in India only the Central Provinces and Behar where women are still unenfranchised.

The new Reform Bill for Burma has included the grant of woman suffrage to the qualified Burmese women and further made provision for their election as Councillors. If the Council passes a Resolution desiring their admission and if that Resolution is approved of by the Governor.

In April, 1922, the Mysore Legislative Council unanimously passed the Woman Suffrage Resolution. The vote for the Representative Assembly of Mysore was granted to women in October, 1922. The vote for Mysore Legislative Franchise was granted to the Mysore women by H. H. The Maharaja and His Privy Council in June 1923. In October 1924 Assam Provincial Council granted Woman Suffrage for

its Province by 26 to 8. It also has been the first Province to pass a Resolution in favour of allowing women to enter the Council as members.

There is little doubt that it will be only a few years at most before all the provinces of India will have granted woman suffrage and the right to vote will advance the interests of women immensely along the lines of education, health, housing, morality and social customs.

The Indian Native States of Travancore, Cochin and Rajkot are the only places in India where the sex disqualification has been completely removed from the statute book. These have allowed women the right to stand for election to the Legislative Council as well as the right to vote for it, and two women have been elected to the newly formed Representative Council of Rajkot. The year 1925 has been noteworthy for the appointment of the first woman Minister to Government. Mrs. Poonam Lukhose became a member of the Travancore Legislative Council on taking the position of State Barber Physician. She is Minister for Health to the State. Cochin State has nominated Mr. Madhavi Amma as a member of its first Legislative Council.

In British India by the terms of the Reform Bill the Councils had no power to alter the disqualification of sex which remains against the right to stand as candidates for election to the Councils. This could only be changed by the vote of the British Parliament and the gaining of this right remains as a far her objective of the women suffragists. Many large influential meetings were held claiming the right of women to entry of the Legislatures. A deputation of women about this subject waited on the Madras Governor and their claims were supported by him and by his Government. The Imperial Legislative Assembly and the Council of State had been accorded the power to grant women the franchise for their assemblies also by resolution but only for those provinces which had already granted women the Legislative franchise. The Legislative Assembly has passed by a large majority a Resolution granting the Assembly franchise to the women of such Provinces. Accordingly in November 1923 women in India voted for the first time for the elections of both Provincial Legislative Councillors and members of the Legislative Assembly. The number of women who voted in the large cities was surprisingly large in Bombay and Madras Presidencies and comprised women of all castes and communities.

In April 1926 as a result of a favourable recommendation of the Muddiman Committee on Franchise Reforms the Bill was changed in the Reform Bill which disqualified women from entering the Legislatures. Power was granted to the Councils and the Assembly to pass Resolutions allowing qualified women to be elected or nominated as members of these bodies. Again Madras Council, on the 17th July was the first to pass a Resolution admitting women to its membership. Bombay and the Punjab have followed its lead in August and October respectively. This has enabled women to become members of the new Councils which will function

for the next three years. But the permission came too late for women to stand for election with any great chance of success so the Women's Indian Association is asking that women be nominated by Government for the new Councils in those Provinces which have voted to admit them and that women also be nominated to the Assembly and the Council of State. Thus this year marks another milestone passed on the road to the complete political emancipation of Indian womanhood.

In 1926 the Central Provinces the Punjab and Bengal all granted the Franchise to women so that at the end of 1927 the only unenfranchised Province is Behar and Orissa. The year 1927 was notable for the nomination of the first Woman member to a Legislative Council in British India the recipient of the honour being Dr Muthu lakshmi Ammal and she was further honoured by being elected unanimously by her colleagues in the Madras Legislative Council to the Office of Deputy President of the Council.

The number of women enfranchised by the grant of the vote throughout India will not be more than a million under the present qualifications. Property and not literacy is the basis of the franchise though the grant of the vote to every graduate of seven years standing ensures that the best educated women of the country as well as those who

have to shoulder the largest property responsibilities will be those who rightly will be the legislating influence on behalf of womanhood. As regards the custom of purdah prevailing in parts of India special provisions have been made in Municipal voting for purdah recording stations for purdah women in which a woman is returning officer and this has been found quite satisfactory and will be adopted also where desired in connection with Legislative Council elections.

Though the Women's Indian Association is the only defined suffrage Society almost all other women's organisations have combined in special efforts for the gaining of municipal and legislative rights and the following ladies have identified themselves specially with the movement. Lady D. Tata, Lady A. Bose, Lady T. Sadashivale, the Begum of Cambay, Mrs Sarojini Naidu, Mrs Jaiji Jehangir Petit, Mrs Tata, Mrs Wadia, Mrs Jinarajadas, Mrs A. Besant, Mrs M. R. Cousins, Mrs Srinangama, Mrs Chandrasekhara Iyer, Miss S. Scrappi, Mrs Khedkar, Dr Mistry, Dr Muthulakshmi Ammal, Mrs. Palmer, Mrs. Saraladevi Choudhuri, Mrs. K. N. Roy, Lady Chaff, Mrs. Hassan Imam, Miss S. B. Das, Mrs. Rustonji Faridoonji, Mrs. B. Rama Rao, Mrs. Deep Narain Singh, Mrs. Raschid, Mrs. van Gildemeester, etc.

PROVING OF WILLS

In British India if a person has been appointed executor of the will of a deceased person it is always advisable to prove the will as early as possible. If the will is in a vernacular it has to be officially translated into English. A petition is then prepared praying for the grant of probate of the will. All the property left by the deceased has to be disclosed in a schedule to be annexed to the petition. The values of immovable properties are usually assessed at 16 1/2 years purchase on the nett Municipal assessment. For estate under Rs. 10,000 the probate duty payable is 2% between Rs. 10,000 and Rs. 50,000 the duty payable is 2 1/4%. Over 50,000 rupees the duty payable is 3%. In determining the amount of the value of the estate for the purposes of probate duty the following items are allowed to be deducted —

1. Debts left by the deceased including mortgage encumbrances

2. The amount of funeral expenses
3. Property held by the deceased in trust and not beneficially or with general power to confer a beneficial interest

The particulars of all these items have to be stated in a separate schedule. It is the practice of the High Court to send a copy of these schedules to the Revenue authorities and if the properties particularly immovable properties have not been properly valued, the Revenue department require the petition to be amended accordingly. In certain cases the Court then requires citations to be published and served on such persons as the Court thinks are interested in the question of the grant of probate. If no objection is lodged by any person so interested within 14 days after the publication or service of citation and if the will is shown to have been properly executed and the petitioner entitled to probate, probate is ordered to be granted.

Warrant of Precedence.

A new Warrant of Precedence for India in supersession of the notification published on February 10 1899 which has been approved by His Majesty the King Emperor of India was published in 1922. Henceforth the following table will be observed with respect to the rank and precedence of persons named, as under —

- 1 Governor General and Viceroy of India
- 2 Governors of Provinces within their respective charges
- 3 Governors of Madras Bombay and Bengal
- 4 Commander-in-Chief in India
- 5 Governors of the United Provinces, Punjab, Behar and Burma
- 6 Governors of the Central Provinces and Assam
- 7 Chief Justice of Bengal
- 8 Bishop of Calcutta Metropolitan of India
- 9 Members of the Governor General's Executive Council
- 10 Commander-in-Chief of His Majesty's Naval Forces in the East Indies
- 11 President of the Council of State.
- 12 President of the Legislative Assembly
- 13 Chief Justice of a High Court other than that of Bengal
- 14 Bishops of Madras and Bombay
- 15 Agents to the Governor General in Rajputana, Central India and Baluchistan Chief Commissioner of the North-West Frontier Province Members of Executive Councils and Ministers of Governors and Lieutenant-Governors Political Resident in the Persian Gulf Residents at Hyderabad and in Mysore and Commissioner in Sind,—within their respective charges
- 16 Chief of the General Staff Chief Commissioner of Railways, General Officer Commanding Northern, Southern Eastern and Western Commands, and Officers of the rank of General
- 17 Members of the Executive Councils and Ministers in Madras Bombay and Bengal
- 18 Members of the Executive Council and Ministers United Provinces Punjab, Burma and Behar
- 19 Agents to the Governor General in Rajputana Central India and Baluchistan Chief Commissioner of the North West Frontier Province Political Resident in the Persian Gulf and Residents at Hyderabad and in Mysore.
- 20 Members of the Executive Councils and Ministers Central Provinces and Assam
- 21 Presidents of Legislative Councils within their respective Provinces
- 22 Chief Judges of Chief Courts and Puisne Judges of High Courts
- 23 Lieutenant-Generals
- 24 Comptroller and Auditor General President of the Public Service Commission and President of the Railway Board.
- 25 Bishops of Lahore Bangalore, Lucknow and Nagpur
- 26 Members of the Railway Board Railway Financial Commissioner, and Secretaries to the Government of India
- 27 Additional Secretaries and Joint Secretaries to the Government of India, Commissioner in Sind, Financial Adviser Military Finances, Judges of Chief Courts and Members of the Central Board of Revenue.

28 Chief Commissioner of the Andamans and Chief Commissioner of Delhi—within their respective charges Chief Secretaries to the Governments of Madras Bombay and Bengal Agent to the Governor General Punjab States when within the Punjab

29 Commissioner of Revenue and Customs, Bombay Consulting Engineer to the Government of India, Development Commissioner Burma Director of Development Bombay Director General Indian Medical Service Director General of Posts and Telegraphs Financial Commissioners Judicial Commissioners of Oudh Central Provinces Sind and Upper Burma Major Generals, members of a Board of Revenue Surgeon-Generals.

30 Vice-Chancellors of the Indian Universities

31 Agents of State Railways Controller of the Currency Additional Judicial Commissioners Agency Commissioner Madras Commissioners of Divisions and Residents of the 2nd Class,—within their respective charges.

32 Members of the Indian Civil Service of 30 years standing (not holding any other appointment mentioned in this Warrant)

33 Advocate General, Calcutta

34 Advocates-General, Madras and Bombay

35 Chief Secretaries to Governments other than those of Madras, Bombay, Bengal and Assam

36 Bishops (not territorial) under Homage from the Crown

37 Accountants-General Class I Agricultural Adviser to the Government of India Archdeacons of Calcutta Madras and Bombay Census Commissioner for India Chief Controller of Stores, Indian Stores Department Colonels Commandant and Colonels on the Staff Commissioner Northern India Salt Revenue, Director, Intelligence Bureau Director General of Archaeology in India Director of the Geological Survey Director Royal Indian Marine when an officer of the Royal Navy of rank lower than Rear Admiral or an officer of the Royal Indian Marine Educational Commissioner with the Government of India His Majesty's Senior Trade Commissioner Calcutta Inspector General of Forests Military Accountant-General Opium Agent Benares, Sanitary Commissioner with the Government of India and Surveyor General of India.

38 Additional Judicial Commissioners, Agency Commissioner Madras, Chief Commissioner of the Andamans Chief Commissioner of Delhi Chief Secretary to the Government of Assam Commissioners of Divisions and Residents of the 2nd Class

39 Private Secretary to the Viceroy Secretaries, Additional Secretaries and Joint Secretaries to Local Governments.

40 Accountants-General other than Class I Chief Auditors Eastern Bengal Railway and North-Western Railway Chief Conservators of Forests Chief Engineers (Chief Engineer Telegraphs Colonels Command Controllers of Military Accounts, Deputy Controller of the Currency at Bombay Director of the Botanical Survey of India, Directors, Civil Engineering, Mechanical Engineering, Traffic and Establishment and Railway Board Director-General of

Commercial Intelligence, Director-General of Observations, Directors of Public Instruction under Local Governments, Director, Zoological Survey, Financial Adviser, Posts and Telegraphs, His Majesty's Trade Commissioners Bombay and Calcutta, Inspectors General Civil Hospitals, Inspectors-General of Police under Local Governments and in the North-West Frontier Province, Inspectors General of Prisons under Local Governments, Members of the Indian Civil Service and of the Indian Political Department of 23 years Civil service, if not holding any other appointment mentioned in this Warrant, Mint Masters Calcutta and Bombay, President of the Forest College and Research Institute, Provincial Sanitary Commissioners, Superintendents of the Imperial Survey of India, and Traffic Managers and Locomotive Superintendents of State Railways

41 Military Secretary to the Viceroy

42 Solicitor to the Government of India and Standing Counsel to the Government of India

Bombay, and Income-tax Officers drawing the maximum pay of the time-scale and Sub-Deputy Opium Agents.

1. The entries in the above table apply exclusively to the persons entered therein and while regulating their relative precedence with each other do not give them any precedence over members of the non official community resident in India who shall take their place according to usage.

2. Officers in the above table will take precedence in order of the numbers of the entries. Those included in one number will take precedence *inter se* according to the date of entry into that number.

3. When an officer holds more than one position in the table he will be entitled to the highest position accorded to him.

4. Officers who are temporarily officiating in any number in the table will rank in that number below permanent incumbents.

5. All officers not mentioned in the above table whose rank is regulated by comparison with rank in the army to have the same rank with reference to civil servants as is enjoyed by military officers of equal grades.

6. All other persons who may not be mentioned in this table to take rank according to general usage, which is to be explained and determined by the Governor General in Council in case any question shall arise. When the position of any such person is so determined and notified it shall be entered in the table in Italy's provided he holds an appointment in India.

7. Nothing in the foregoing rules to disturb the existing practice relating to precedence at the Courts of Indian States or on occasions of intercourse with Indians and the Governor General in Council to be empowered to make rules for such occasions in case any dispute shall arise.

8. The following will take courtesy rank as shown —

Consuls-General Immediately after article 37 which includes Colonels Commandant Consuls Immediately after article 40 which includes

Colonels Vice-Consuls, Immediately after article 43 which includes Majors.

Consular officers de carrière will in their respective grades take precedence of consular officers who are not de carrière.

9. The following may be given by courtesy, precedence as shown below, provided that they do not hold appointments in India —

Peers according to their precedence in England knights of the Garter the Thistle and St Patrick Privy Councillors Members of the Council of the Secretary of State for India. — Immediately after Members of the Governor General's Executive Council article 9.

Baronets of England Scotland Ireland and the United Kingdom according to date of Patent. Knights Grand Cross of the Bath Knights Grand Commander of the Star of India Knights Grand Cross of St Michael and St George Knights Grand Commander of the Indian Empire Knights Grand Cross of the Royal Victorian Order Knights Grand Cross of the Order of the British Empire Immediately after the Commissioner in Hind (Article 15) Knights Commander of the Bath Knights Commander of the Star of India knights Commander of St Michael and St George Knights Commander of the Indian Empire knights Commander of the Royal Victorian Order Knights Commander of the Order of the British Empire and Knights Bachelor — immediately after the Residents of the Second Class Article 31.

10. All ladies unless by virtue of holding an appointment themselves they are entitled to a higher position in the table to take place according to the rank herein assigned to their respective husbands with the exception of wives of Peers and of ladies having precedence in England independently of their husbands and who are not in rank below the daughters of Barons such ladies to take place according to their several ranks with reference to such precedence in England immediately after the wives of Members of the Governor General's Executive Council.

Indian Orders.

The Star of India

The Order of the Star of India was instituted by Queen Victoria in 1861, and enlarged in 1866, 1876, 1907, 1902 and 1911 and the dignity of Knight Grand Commander may be conferred on Princes or Chiefs of India, or upon British subjects for important and loyal service rendered to the Indian Empire the second and third classes for services in the Indian Empire of not less than thirty years in the department of the Secretary of State for India. It consists of the Sovereign, a Grand Master (the Viceroy of India) the first class of forty five Knights Grand Commanders (23 British and 22 Indian), the second class of one hundred Knights Commanders, and the third class of two hundred and twenty five Companions, exclusive of Extra and Honorary Members, as well as certain additional Knights and Companions.

The Insignia are (i) the Collar of gold, composed of the lotus of India, of palm branches tied together in satire, of the united red and white roses and in the centre an Imperial Crown all enamelled in their proper colours and linked together by gold chains. (ii) The Star of a Knight Grand Commander is composed of rays of gold issuing from a centre, having thereon a star of five points in diamonds resting upon a light blue enamelled circular ribband, tied at the ends and inscribed with the motto of the Order *Reason's Light our Guide* also in diamonds. That of a Knight Commander is somewhat different, and is described below. (iii) The Badge, an onyx cameo having Her Majesty Queen Victoria's Royal Effigy thereon set in a perforated and ornamental oval containing the motto of the Order surmounted by a star of five points, all in diamonds. (iv) The Mantle of light blue satin lined with white, and fastened with a cord of white silk with blue and silver tassels. On the left side a representation of the Star of the Order.

The ribbon of the Order (four inches wide for Knights Grand Commanders) is sky blue, having a narrow white stripe towards either edge, and is worn from the right shoulder to the left side. A Knight Commander wears (a) around his neck a ribbon two inches in width of the same colours and pattern as a Knight Grand Commander and pendant therefrom a badge of a smaller size (b) on his left breast a Star composed of rays of silver issuing from a gold centre, having thereon a silver star of five points resting upon a light blue enamelled circular ribbon tied at the ends, inscribed with the motto of the Order in diamonds. A Companion wears from his left breast a badge of the same form as appointed for a Knight Commander, but of a smaller size pendant to a like ribbon of the breadth of one and a half inches. All Insignia are returnable at death to the Central Chancery or if the recipient was resident in India to the Secretary of the Order at Calcutta.

Sovereign of the Order—His Most Glorious Majesty The King-Emperor of India.

Grand Master of the Order—His Excellency the Viceroy and Governor-General of

India, the Right Honourable Lord Irwin P.C., G.M.S.I. G.M.I.E.

Officers of the Order—*Registrar* Col the Hon. Sir George Arthur Charles Crichton K.C.V.O. Secretary of the Central Chancery of the Orders of Knighthood St James Palace London W 1.

The Most Eminent Order of the Indian Empire

This Order, instituted by H. M. Queen Victoria, Empress of India, Jan 1st, 1878, and extended and enlarged in 1885, 1887, 1892, 1897, and 1902 is conferred for services rendered to the Indian Empire and consists of the Sovereign a Grand Master forty Knights Grand Commanders (of whom the Grand Master is first and principal) one hundred and forty Knights Commanders, and an indefinite number of Companions (not exceeding, without special statute 20 nominations in any one year), also Extra and Honorary Members over and above the vacancies caused by promotion to a higher class of the Order as well as certain Additional Knights and Companions appointed by special statute Jan 1st 1909 commemorative of the 60th Anniversary of the assumption of Crown Govt in India.

The insignia are (1) The COLLAR of gold formed of elephants, lotus flowers, peacocks in their pride and Indian roses, in the centre the Imperial Crown the whole linked together with chains (2) The STAR of the Knight Grand Commander, comprised of five rays of silver,

having a small ray of gold between each of them the whole alternately plain and scaled, issuing from a gold centre, having thereon Her Majesty Queen Victoria's Royal Effigy, within a purple circle, edged and lettered gold, inscribed *Imperatrix Austriacae*, and surmounted by an Imperial Crown gold (3a) The BADGE consisting of a rose enamelled gules, barbed vert, and having in the centre Her Majesty Queen Victoria's Royal Effigy within a purple circle, edged and lettered gold, inscribed *Imperatrix Austriacae* surmounted by an Imperial Crown also gold (3b) The MANTLE is of Imperial purple satin lined with and fastened by a cordon of white silk with purple silk and gold tassels attached. On the left side a representation of the Star of the Order

A Knight Commander wears (4) around his neck a ribbon two inches in width of the same colour (purple) and pattern as a Knight Grand Commander pendent therefrom a badge of smaller size (5) on his left breast a star, similar to that of the first class, but the rays of which are all of silver

The above mentioned insignia are returned at death to the Central Chancery or if the knight was resident in India to the Secretary of the Order at Calcutta

A Companion wears from the left breast a badge (not returnable at death) of the same form as appointed for a Knight Commander but of smaller size pendent to a like ribbon of the breadth of one and a half inches.

Sovereign of the Order—His Most Gracious Majesty The King Emperor of India
Grand Master of the Order—H. E. the Viceroy Lord Irwin

Officers of the Order—The same as for the Order of the Star of India.

 H. H. Begum of Bhopal
 France Charlotte, Lady Chelmsford
 Countess of Reading
 H. H. Maharani Sahiba, Raja Sahiba Sundia
 Akshah Bahadur of Gwalior
 H. E. The Lady Irwin

Distinctive Badges.—An announcement was made at the Coronation Durbar in 1911, that a distinctive badge should be granted to present holders and future recipients of the titles of Diwan Bahadur, Sardar Bahadur,

Khan Bahadur, Rai Bahadur, Rao Bahadur, Khan Sahib, Rai Sahib and Rao Sahib. Subsequently the following regulations in respect of these decorations were issued:—(1) The decoration to be worn by the holders of the titles above mentioned shall be a badge or medallion bearing the King's effigy crowned and the name of the title, both to be executed on a plaque or shield surrounded by a five-pointed star surmounted by the Imperial Crown, the plaque or shield being of silver gilt for the titles of Diwan, Sardar, Khan, Rai and Rao Bahadur, and of silver for the titles of Khan, Rai, and Rao Sahib. (2) The badge shall be worn suspended round the neck by a ribbon of one inch and a half in width, which for the titles of Diwan and Sardar Bahadur shall be light blue with a dark blue border for the titles of Khan, Rai and Rao Bahadur light red with a dark red border and for the titles of Khan, Rai and Rao Sahib dark blue with light blue border.

A Press Note issued in November, 1914 states:—The Government of India have recently had under consideration the question of the position in which miniatures of Indian titles should be worn, and have decided that they

should be worn on the left breast fastened by a brooch and not suspended round the neck by a ribbon as prescribed in the case of the badge itself. When the miniatures are worn in conjunction with other decorations, they should be placed immediately after the Kaiser-i-Hind Medal.

Indian Distinguished Service Medal.—This medal was instituted on June 28th 1907, by an Army Order published in Simla as a reward for both commissioned and non-commissioned officers of the regular and other forces in India. It bears on the obverse the bust of King Edward VII and on the reverse a laurel wreath encircling the words *For Distinguished Service*. The medal, $1\frac{1}{2}$ inches in diameter is ordered to be worn immediately to the right of all war medals suspended by a red ribbon $1\frac{1}{2}$ in wide with blue edges $\frac{1}{2}$ in wide. This medal may be conferred by the Viceroy of India.

Indian Order of Merit.—This reward of valour was instituted by the H. E. I. Co. in 1837 to reward personal bravery without any reference to length of service or good conduct. It is divided into three classes and is awarded to native officers and men for distinguished conduct in the field. On the advancement from one class to another the stars surrendered to the Government, and the superior class substituted but in the event of the death of the recipient his relatives retain the decoration. The order carries with it an increase of one third in the pay of the recipient and in the event of his death the allowance is continued to his widow for three years. The First Class consists of a star of eight points $1\frac{1}{2}$ in in diameter having in the centre a ground of dark blue enamel bearing crossed swords in gold within a gold circle and the inscription *Reward of Valour*, the whole being surmounted by two wreaths of laurel in gold. The Second Class star is of silver with the wreaths of laurel in gold and the Third Class entirely of silver. The decoration is suspended from a simple loop and bar from a dark blue ribbon $1\frac{1}{2}$ in in width with red edges bearing a gold or silver buckle according to class.

Order of British India.—This order was instituted at the same time as the Order of Merit to reward native commissioned officers for long and faithful service in the Indian Army. Since 1878 however any person European or native, holding a commission in a native regiment became eligible for admission to the Order without reference to creed or colour. The First Class consists of a gold eight-pointed radiated star $1\frac{1}{2}$ in in diameter. The centre is occupied by a lion statant guardant upon a ground of light-blue enamel within a dark blue band inscribed *Order of British India*, and encircled by two laurel wreaths of gold. A gold loop and ring are attached to the crown for suspension from a broad ornamental band $\frac{3}{4}$ in in diameter through which the ribbon, once blue now red is passed for suspension from the neck. The Second Class is $1\frac{1}{4}$ in in diameter with dark blue enamelled centre there is no crown on this class and the suspender is formed of an ornamental gold loop. The reverse is plain in both classes. The First Class carries with it the title *Sirdar Bahadur*, and an additional allowance of two rupees a day

and the Second the title of Bahadur and an extra allowance of one rupee per day

Indian Meritorious Service Medal—This was instituted on July 27th, 1888, and on receipt of the medal the order states a non-commissioned officer must surrender his Long Service and Good Conduct medal but on being promoted to a commission he may retain the M. S. Medal but the annuity attached to it will cease On the obverse is the diademed bust of Queen Victoria facing left, with a veil falling over the crown behind encircled by the

legend Victoria Kaisar-i-Hind On the reverse is a wreath of lotus leaves enclosing a wreath of palm tied at the base having a star beneath between the two wreaths is the inscription for meritorious service Within the palm wreath is the word India The medal is in diameter is suspended from a scroll by means of a red ribbon 1½ in wide The medals issued during the reign of Queen Victoria's successors bear on the obverse their bust in profile with the legend altered to EDWARDS or GEORGE V.

THE KAISAR-I-HIND MEDAL

This decoration was instituted in 1900 the preamble to the Royal Warrant—which was amended in 1901 and 1912—being as follows:—Whereas We taking into Our Royal consideration that there do not exist adequate means whereby We can reward important and useful services rendered to Us in Our Indian Empire in the advancement of the public interests of Our said Empire, and taking also into consideration the expediency of distinguishing such services by some mark of Our Royal favour Now for the purpose of attaining an end so desirable as that of thus distinguishing such services aforesaid, We have instituted and created and by these presents for Us Our Heirs and Successors, do institute and create a new Decoration The decoration is styled "The Kaisar-i-Hind Medal for Public Service in India and consists of two classes. The Medal is an oval shaped Badge or Decoration—in gold for the First Class and in silver for the Second Class—with the Royal Cypher on one side and on the reverse the words Kaisar-i-Hind for Public Service in India It is suspended on the left breast by a dark blue ribbon

THE VICTORIA CROSS

The announcement, made at the Delhi Durbar in 1911 that in future Indians would be eligible for the Victoria Cross gave satisfaction which was increased during the War and afterwards by the award of that decoration to the following —

Subedar (then Sepoy) Khudadad Khan 139th Baluchis.—On 31st October 1914, at Hollebeke, Belgium, the British Officer in charge of the detachment having been wounded, and the other gun put out of action by a shell Sepoy Khudadad though himself wounded remained working his gun until all the other five men of the gun detachment had been killed.

Naik Darwan Sing Negi, 139th Garhwal Rifles.—For great gallantry on the night of the 23rd-24th November 1914 near Fesembert, France, when the Regiment was engaged in retaking and clearing the enemy out of our trenches, and although wounded in two places in the head and also in the arm being one of the first to push round each successive traverse in the face of severe fire from bombs and rifles at the closest range.

Subadar (then Jemadar) Mir Dast 55th Coy. Rifes.—For most conspicuous bravery and great ability at Ypres on 28th April 1915 when he led his platoon with great gallantry during the attack and afterwards collected various parties of the Regiment (when no British Officers were left) and kept them under his command until the retirement was ordered. Jemadar Mir Dast subsequently on this day displayed remarkable courage in helping to carry eight British and Indian Officers into safety whilst exposed to very heavy fire.

Rifleman Kulbir Thapa, 23rd Gurkha Rifles.—For most conspicuous bravery during operations against the German trenches south of Mangusart. When himself wounded, on the 35th September 1915, he found a badly wounded soldier of the 2nd Leicestershire Regiment behind the first line German trench and though urged by the British soldier to save himself, he remained with him all day and night. In the early morning of the 26th September, in misty weather he brought him out through the German wire and leaving him in a place of comparative safety returned and brought in two wounded Gurkhas one after the other. He then went back in broad daylight for the British soldier and brought him in also carrying him most of the way and being at most points under the enemy's fire.

Havildar (then Lance Naik) Lala, 41st Dogras.—Finding a British Officer of another regiment lying close to the enemy he dragged him into a temporary shelter which he himself had made, and in which he had already bandaged four wounded men. After bandaging his wounds he heard calls from the Adjutant of his own Regiment who was lying in the open severely wounded. The enemy were not more than one hundred yards distant and it seemed certain death to go out in that direction, but Lance Naik Lala insisted on going out, his Adjutant, and offered to crawl back with him on his back at once. When

this was not permitted, he strapped off his own clothing to keep the wounded officer warm and stayed with him till just before dark when he returned to the shelter. After dark he carried the first wounded officer back to the main trenches and then returning with a stretcher carried back his Adjutant. He set a magnificent example of courage and devotion to his officers.

Sepoy Chatta Singh, 9th Bhopal Infantry.—For most conspicuous bravery and devotion to duty in leaving cover to assist his Commanding Officer who was lying wounded and helpless in the open. Sepoy Chatta Singh bound up the officer's wound and then dug cover for him with his entrenching tool being exposed all the time to very heavy rifle fire. For five hours until nightfall he remained beside the wounded officer shielding him with his own body on the exposed side. He then under cover of darkness went back for assistance and brought the officer into safety.

Naik Shahamad Khan, 89th Punjabis.—For most conspicuous bravery. He was in charge of a machine gun section in an exposed position in front of and covering a gap in our new line with in 150 yards of the enemy's entrenched position. He beat off three counter-attacks and worked his gun single-handed after all his men except two belt-fillers had become casualties. For three hours he held the gap under very heavy fire while it was being made secure. When his gun was knocked out by hostile fire he and his two belt-fillers held their ground with rifles till ordered to withdraw. With three men sent to assist him he then brought back his gun ammunition and one severely wounded man unable to walk. Finally he himself returned and removed all remaining arms and equipment except two shovels. But for his great gallantry and determination our line must have been penetrated by the enemy.

Lance Dafadar Govind Singh, 28th Cavalry.—For most conspicuous bravery and devotion to duty in thrice volunteering to carry messages between the regiment and brigade headquarters, a distance of 1½ miles over open ground which was under the observation and heavy fire of the enemy. He succeeded each time in delivering his message although on each occasion his horse was shot and he was compelled to finish his journey on foot.

Rifleman Karan Bahadur Rana, 23rd Gurkha Rifles.—For conspicuous bravery and resource in action under adverse conditions and utter contempt of danger during an attack. He with a few other men succeeded, under intense fire in creeping forward with a Lewis gun in order to engage an enemy machine gun which had caused severe casualties to officers and other ranks who had attempted to put it out of action. No. 1 of the Lewis gun party opened fire and was shot immediately. Without a moment's hesitation Karan Bahadur pushed the dead man off the gun and in spite of bombs thrown at him and heavy fire from both flanks, he opened fire and knocked out the enemy machine gun crew. Then switching his fire on the enemy bombers

and riflemen in front of him, he silenced their fire. He kept his gun in action, and showed the greatest coolness in removing defects which had twice prevented the gun from firing. He did magnificent work during the remainder of the day and when a withdrawal was ordered assisted with covering fire until the enemy was close to him. He displayed throughout a very high standard of valour and devotion to duty.

Reesalder Badlu Singh 14th Lancers attached 26th Lancers—For most conspicuous bravery and self sacrifice on the morning of the 23rd September 1918 when his squadron charged a strong enemy position on the west bank of the River Jordan between the river and Kh es Bamarneh Village. On nearing the position Reesalder Badlu Singh realised that the squadron was suffering casualties from a small hill on the left front occupied by machine guns and 200 infantry. Without the slightest hesitation he collected six other ranks and with the greatest dash and an entire disregard of danger charged and captured the position thereby saving very heavy casualties to the squadron. He was mortally wounded on the very top of the hill when capturing one of the machine guns single handed, but all the machine guns and infantry had surrendered

to him before he died. His valour and initiative were of the highest order.

Rifleman Gobhar Sing Negi 2nd Battalion 39th Garhwal Rifles—For most conspicuous bravery on 10th March 1916 at Neuve Chapelle. During an attack on the German position he was one of a bayonet party with bombs who entered their main trench, and was the first man to go round each traverse driving back the enemy until they were eventually forced to surrender. He was killed during this engagement.

Sepoy Ishaw Singh 28th Punjab—For devotion and bravery quite beyond all praise in Waziristan on 10th April, 1921. He received a severe gunshot wound in the chest while serving a Lewis gun and when all the havildars had been killed or disabled he struggled to his feet called to his assistance two men and charged and recovered the gun, restoring it to action. He refused medical attention insisting first on pointing out where the other wounded were and on carrying water to them. While the medical man was attending to these wounded he shielded him with his body and he submitted to medical attention himself only after he was exhausted through three hours' continual effort and by loss of blood.

PASSPORT REGULATIONS

A—British Subjects

1 British Indian passports are only issued to British subjects and to British protected persons.

2 The Indian Passport Regulations do not require persons to obtain passports before embarking from any port in British India but as practically every other country requires travellers to be in possession of passports for landing, intending travellers are advised to have passports before embarkation. Members of His Majesty's Naval, Military or Air Forces or of the Royal Indian Marine Service travelling on duty, and members of the families of such persons when travelling to the United Kingdom at Government expense need not have passports.

3 Passports are not required for journeys by sea from Bombay to British ports in India or to Burma or Ceylon nor are passports required by British Indian subjects travelling to the Federated Malay States or the Straits Settlements unless they propose to continue their journey onward.

4 As a passport is valid for five years there is no objection to anyone applying for a passport weeks or even months in advance of the date of sailing and much inconvenience and in some cases serious trouble will be avoided by early application. A notice of at least four days should be given for the preparation of a new passport and at least two days for an endorsement renewal or visa.

5 In order to obtain a passport an application form showing among other things the destination, route and reasons for the proposed journey must be filled up by the applicant and certified by a Political Officer, Magistrate, Justice of the Peace, Police Officer not below

the rank of Superintendent or Notary Public resident in India. Copies of this form can be obtained from any District Magistrate from the Commissioner of Police, Bombay by post from the Passport Officer to the Government of Bombay by personal application at the Passport Office, or from any of the leading Banking and Shipping Agents in Bombay. Two unmounted copies of the photograph of the applicant and a fee of Rs 8 should be submitted with the application form. Fees are not accepted in stamps or by cheque.

6 The application form when filled up should either be posted with the photographs and fee to the Passport Officer to the Government of Bombay or should be presented in person at the Passport Office, Bombay.

7 The Passport Office in Bombay is situated in the Civil Secretariat. The office is open from 11 a.m. to 4 p.m. daily except on Saturdays when it closes at 1 p.m. and on Sundays and public holidays when it is not open at all.

8 The Passport Officer cannot issue passports outside the working hours shown above and the preparation of a passport takes time. Applicants therefore who postpone application to the last moment do so at their own risk.

Iraq

9 Members of His Majesty's Naval, Military or Air Forces or of the Indian Forces in uniform and *bona fide* Muhammadan pilgrims travelling in organised parties and holding a pilgrim pass do not require passports for the journey to Iraq. All other travellers must be in possession of passports which except in the case of *bona fide* representatives of firms, persons on a short visit to Iraq or merely passing

through Iraq en route to another country will not be granted without the previous permission of the local authorities in Iraq. The Passport Officer will on request ask for this permission by post or if the applicant is prepared to defray the cost of a telegram by cable. Applicants must state clearly the nature of their business and one or more references in Iraq from whom the local authorities can make inquiries regarding the bona fide of their journey.

10. Restrictions also exist on travel to various parts of the British Empire and to certain foreign countries. Amongst these may be mentioned Australia, Canada, Constantinople, Egypt, Gibraltar, Mohammedan and Abadan, New Zealand, Palestine, Southern Rhodesia, Union of South Africa, South West Africa and the United States of America. The restrictions apply particularly to Indians. Detailed particulars with respect to each country will be supplied on application.

Foreign Countries

11. Passports for journeys to or through foreign countries require after issue the visa of the Consul concerned. The addresses of the foreign consulates in Bombay are shown below. Visas are however not necessary for Belgium, Denmark, France, Holland, Iceland, Italy, Norway, Spain, Sweden, Switzerland, Liechtenstein and Luxembourg provided the names of these countries are entered on the passport.

Renewal

12. Passports issued before the 1st December 1925 were valid for periods of two years only whilst those issued after that date are valid for five years. All passports however may be renewed for periods of from one to five years at the option of the holder from the date of expiration but in no case can a passport be extended beyond two years from the original date of issue. On expiration of that period or if at any time the space provided for visas is covered and the holder wishes to travel to countries for which fresh visas are required a new passport must be obtained. Application for renewal must be made in the prescribed form copies of which may be had from any of the officers mentioned in paragraph 5 above. The fee for renewal is Re 1 for each year or portion of a year for which the passport is renewed.

Endorsements

13. A passport is valid only for the country or countries endorsed on it and fresh endorsements from British Passport authority are not needed during the validity of the passport for subsequent journeys to these countries. Fresh endorsements may however be obtained on the passport for additional countries. Passports endorsed as valid for the British Empire are also available for travelling to territories

under British protection or mandate not how ever to Palestine, Iraq or Egypt for which countries the passport must be specially endorsed. No fee is payable for an endorsement.

Marriage

14. A lady on marriage or re-marriage requires a fresh passport.

15. In the case of a joint passport issued in favour of a husband and wife the latter cannot travel alone on it but should take out a fresh passport surrendering the joint passport for cancellation of her name from it.

B—Foreigners.

16. No foreigner can hold a British passport.

17. Foreigners proceeding direct to their own countries or to or through any other foreign countries do not require a British visa on their passports. The nationals of the following countries do not require a British visa for travelling to the United Kingdom (This concession also applies to certain nationals proceeding to certain British Dominions and Colonies and information on this point can be obtained from the Passport Officer) —

Belgium, Denmark, France, Holland, Iceland, Italy, Norway, Spain, Sweden, Switzerland, Liechtenstein and Luxembourg.

18. Foreigners who are subjects of the countries shown below and who are travelling to British territory for which a British visa is necessary should first obtain passports from their consular representatives and should then present them to the Passport Officer for visa together with a written statement of the reasons for the journey. If the passport of a foreigner bears a British visa which terminates in India and the holder desires to undertake another journey to a territory under British jurisdiction he should first obtain an endorsement from his consular representative and then present it to the Passport Officer for visa. There are three kinds of visas granted viz. the Non-Transit, Transit and Transshipment visas for these vary according to rates charged to British subjects by the foreign countries concerned.

19. Other foreigners should apply for Identity certificates through the Commissioner of Police, Bombay or where such foreigners reside in the mofussil through the District Magistrate of the district in which they are residing. Two copies of the applicant's photograph should accompany the application. The fee for a certificate of identity is Re 1-8-0.

20. The holder of a foreign passport who has obtained a visa granted by a British Passport Authority outside India for a destination which involves landing in or passing through India does not need a further visa from the authorities in India.

The School of Oriental Studies

This School was established by Royal Charter in June 1918. The purposes of the School (as set out in the Charter) are to be a School of Oriental Studies in the University of London to give instruction in the languages of Eastern and African peoples Ancient and Modern, and in the Literature History Religion and Customs of those peoples especially with a view to the needs of persons about to proceed to the East or to Africa for the pursuit of study and research commerce or a profession and to do all or any of such other things as the Governing Body of the School consider conducive or incidental thereto having regard to the provision for those purposes which already exists elsewhere and in particular to the co-ordination of the work of the School with that of similar institutions both in Great Britain and in its Eastern and African Dominions and with the work of the University of London and its other Schools.

The School possesses noble and adequate buildings in Finsbury Circus provided by the British Government under the London Institution (Transfer) Act of 1912. The sum of £25,000 required for the alteration and extension of the buildings of the London Institution for the purposes of the School was voted by Parlia-

ment. The School buildings are quiet, although they are in the heart of the City. The School provides teaching in more than sixty subjects. In a considerable proportion of the spoken languages instruction is given by teachers belonging to the countries where the languages are spoken as it is the aim of the School to provide as far as possible both European and Oriental Lecturers in the principal languages included in the curriculum.

Courses on the History Religions, and Customs of Oriental and African countries form a special feature in the teaching of the School. There is now a whole time lecturer in Phonetics, the class for which are numerically larger than in any other subject. It is intended to record fully in phonetic symbols all the languages taught at the School.

Courses are also provided in Indian Law and the History of India, and arrangements are made from time to time for special courses of lectures to be given by distinguished orientologists not on the staff. Various Scholarships are given.

Patron, H. M. The King. *Chairman of the Governing Body* Sir Harry L. Stephen. LL.M. *Director*, Professor Sir E. Denison Ross, C.I.E., F.R.S.

- 9 University Professor of Swahili and other Bantu languages and Appointed Teacher

The fisheries of India, potentially rich as yet, yield a mere fraction of what they could were they exploited in a fashion comparable with those of Europe, North America or Japan. The fishing industry, particularly the marine section, has certainly expanded considerably within the last 50 years concurrently with improvement in the methods of transport and increase in demand for fish, cured as well as fresh from the growing populations of the great cities within reach of the seaboard. The caste system however exerts a blighting influence on progress. Fishing and the fish trade are universally relegated to low caste men who, alike from their want of education, the isolation caused by their work and caste and their extreme conservatism are among the most ignorant, suspicious and prejudiced of the population, extremely averse from amending the methods of their forefathers and almost universally without the financial resources requisite to the adoption of new methods even when convinced of their value. Higher caste capitalists have hitherto fought shy of association with the low caste fishermen and except in the case of joint stock companies to engage in large operations, it now lies to these capitalists cannot be counted upon to assist in the development of Indian fisheries. As in Japan, it appears that the general conditions of the industry are such that the initiative must necessarily be taken by Government in the uplift and education of the fishing community and in the introduction and testing of new and improved apparatus and methods.

The first local Government to lead the way was that of Madras which in 1905 initiated an investigation of the industry both marine and fresh water appointing Sir L. A. Nicholson to supervise operations. Bengal followed suit in 1906 and from these beginnings have sprung the local Fisheries Departments of Madras, Bengal and Bihar and Orissa. Bombay, the remaining seaboard province has comparatively small fresh water interests compared with Madras and Bengal and as it happens that her marine fisheries are favoured with good harbours and the most enterprising race of sea fishermen in India there was less urgent need for State help in the industry. Fisheries there were a subject of Government solicitude for five years after the war but they finally ceased to receive any attention after the abolition in 1924 of the short-lived Department of Industries to which this subject was allotted.

Madras

The Madras coast line of 1,750 miles is margined by a shallow water area within the 100 fathom line of 40,000 sq miles outside of a mere fringe inshore; this vast expanse of fishable water has little and unproductive. The Gulf of Bengal Coast is singularly deficient in harbours whereon fishing fleets can be based and so from Canjiam to Negapatnam the unmanageable catamaran composed of logs tied side by side, is the only possible seagoing fishing craft. Its limitations circumscribe the fishing power of its owners and consequently these men are poor and the produce of their best efforts meagre compared with what it would be if better and larger boats were available and possible. The West coast is more favoured

From September till April weather conditions are good enough to permit even dugout canoes to fish daily. The people of this coast are fond of fish and no difficulty is found in beaching canoes and boats throughout this season. The fishing population is a large one. The 1921 Census gave 66,684 adults as subsisting on fishing industries in Malabar and South Kanara, a small number after all considering the immense wealth of these seas. The chief fishes are sardines, mackerel, catfishes and jewfishes (kora or gol) the two first overshadow all others. So greatly in excess of food requirements are the catches of sardines that every year large quantities are turned into oil and manure. The 1925-26 season was a slight improvement over that of last year for 4,880 tons of oil and 9,850 tons of manure were manufactured as against 2,650 tons of oil and 4,000 tons of manure in the previous year. Fishing outside the 5 fathom line is little in evidence save by Bombay boats (Ratanagiri) which are engaged in drift netting for bonito, soer and other medium sized fishes. These strangers are entering fishing and bring large catches into Malpe and Mangalore and other convenient centres the material is largely cured for export.

Fish Curing is practised extensively everywhere on the Madras coast. Its present success is due primarily to Dr. Francis Day who after an investigation during 1869-71 of the fisheries of the whole of India pressed for the grant to fishermen of duty free salt for curing purposes within fenced enclosures. He advocated much else but the time was not ripe and the salt concession was the sole tangible result of his long and honourable efforts. His salt suggestions were accepted by the Madras Government and from 1888 a gradually increasing number of yards or bounded enclosures were opened at which salt is issued free of duty and often at rates below the local cost of the salt to Government. At present about 10% of 500 yards are scattered along the coast and over 55,000 tons of wet fish are annually cured therein. The total receipts on the administration of these yards for the year 1925-26 was Rs. 3,95,270 and expenditure Rs. 3,70,949. The credit balance on the year's working was therefore Rs. 18,321.

Pearl and Shank Fisheries.—The antiquities of 1,425 were more than realised in the remunerative and successful pearl fishery which was held at Tuticorin last February and March.

The last pearl fishery of any consequence was in the year 1883 more than quarter of a century ago. Under the British Rule there have been 18 pearl fisheries including the present in magnitude the fishery held in 1923 stands fourth. The three previous fisheries which yielded a larger revenue were in the years 1807, 1810 and 1860-61. In the last 100 years the 1923 fishery ranks second and in the last half a century it is easily the first.

The total number of oysters fished was 14,06,439. The fishery yielded a substantial net revenue of Rs. 1,80,267,511 indicating both the value of scientific control by a technical department and the efficiency and accuracy of the inspection surveys and estimates. A cursory examination of the pearl banks this year so far as monsoon permitted shows the continuance of oysters on the Tholayram Par (bank)

and consequently the possibility of another fishery early next year.

Though the best chank season (February and March) was spent in pearl fishing the premature closure of the pearl fishery and the long spell of good weather extending till the middle of May combined with the fact that the divers were in the department's employ enabled the prosecution of chank fisheries to maximum advantage in Ramnad where very nearly the average number of chanks in normal chank fishery years may be fished in spite of the pearl fisheries. The net receipts therefore from chank fisheries amounted in the year to Rs 2,342 11 6 against Rs 3,844 in 1924-25. The net profit for 1925-26 was therefore only Rs 1,64 8 10.

The Inland Fisheries of Madras comparatively unfavourably with those of Bengal. Many of the rivers dry up in the hot season and few of the many thousands of irrigation tanks throughout the province hold water for more than 6 to 9 months. As a consequence inland fisheries are badly organised and few men devote themselves to fishing as their sole or even main occupation. The custom is to neglect or ignore the fishery value of these streams and tanks so long as they are full of water, only when the streams shrink to pools and the tanks to puddles do the owners or lessees of the fishing rights turn out to catch fish. The result is a dearth of fish throughout the greater part of the year a glut for a few days and often much waste in consequence. The chief fresh water fishes of economic importance are the murrel, notable for its virtue of living for considerable period out of water, various carps and catfishes, the hilsa (in East Coast rivers only) and the catla. In the Nigiris the Rainbow trout has been acclimatised and thrives well. The Government working in conjunction with the Nigiri Game Association maintain a hatchery at Avalanche where quantities of fry are hatched and reared for the replenishment of the streams of the plateau. The net profits on inland fishery in 1925-26 were Rs 8,87.

The Madras Department of Fisheries. As Government attention has been given in Madras over a longer period to the improvement of fisheries and a larger staff concentrated upon the problems involved than elsewhere this Presidency has now the proud position of knowing that her fisheries and collateral industries are better organised and more progressive than those in other provinces. The credit for the wonderful success which has been achieved and the still greater promise of the future, is due in large measure to the wise and cautious plans of Sir F. A. Nicholson who from 1906 to 1918 had the guidance of affairs entrusted to him. In 1906 he was appointed on special duty to investigate existing conditions and future potentialities. In 1907 a permanent status was given by the creation of a fisheries bureau and this in turn has developed into a separate Department of Government which till August 1923 was being administered by Mr James Hornell F.L.S., as Director and is now controlled by his successor Dr B. Sundara Raj M.A. Ph.D. The higher staff consists of a Superintendent of Pearl and Chank Fisheries, three Assistant Directors and a Cannery Superintendent. These are respectively in charge of (a) the departmental fisheries (pearling, chanks

beche-de-mer etc.) (b) the co-operative and socio-economic side of the Department's operations (c) inland pisciculture (d) deep-sea fishing and salt-transport and (e) the experimental and demonstration fish cannery at Chulivam in South Malabar. Other officers have charge respectively of sections dealing with education and industrial work, which include a Training Institute for village teachers, fish curing yards and oil and guano factories. All the public fish curing yards till now under the control of the Salt and Abkari Department have passed into the charge of the Fisheries Department. It is now possible to introduce the better methods of cure and improved hygiene which the Department has been striving to popularise in all the yards. Due to the transfer of the yards the Fisheries Department has a large ramified staff of yard officers (Salt Sub-Inspectors, Petty Yard Officers and peons) in almost every large fishing village on the coast. Besides the direct work of issuing salt for curing the Department will now set itself to train these officers into expert advisers in curing methods and marketing fish, social workers for the inculcation of thrift, co-operative and progressive ideas and new industries and lastly as trained observers for recording and reporting on various biological questions connected with fish and fisheries and collecting statistics regarding the value and quantity of sea fish caught and landed.

The activities of the Department are so varied and far reaching that it is difficult even to enumerate them in the space available much less to give details. So far its most notable industrial successes have been the reform of manufacturing processes in the fish oil trade, the creation of a squalene industry, the establishment of a fish cannery and the development of canned goods other than sardines which alone had been canned previously in Malabar and the opening of an oyster farm conducted under hygienic conditions (for details see the Bulletins of the Department issued from the Government Press Madras) seventeen volumes have been issued to date and the eighteenth volume is in press. All this work has been carried on under serious handicap for want of suitable accommodation for the research staff.

Marine Aquarium.—Perhaps a word is well said about this institution at Madras. The building was constructed under the auspices of the Superintendent Government Museum Madras and was thrown open to the public on 31st October 1909. The Superintendent Government Museum had charge of the Aquarium for ten years till 1919 when it was transferred to the Department of Fisheries.

Ever since its opening being the first of its kind in Asia it has been immensely popular with the public. The number of visitors rose during the year to 111,931 from 88,627 in the previous year. Two rates of admissions are charged, viz. one anna and four annas. The latter rate is charged on Fridays for the benefit of those who would like to see the Aquarium under less-crowded conditions. The net profit realized last year was Rs 8,961.

Fishing rights in the large irrigation tanks were transferred from Government to local authorities many years ago, these tanks are

now being reacquainted by Government in order that they may be restocked periodically by the Department the results so far have shown a profit on the operations. To breed the necessary fry three fish farms are in operation and the construction of three more is in progress. In these the chief fish bred are the Gourami obtained from Java the Murrel and *Kribia* surinensis, which has the excellent attribute of thriving and breeding as well in brackish as in fresh water. All three protect their eggs well, developing a useful habit both the Gourami and *Kribia* are largely vegetarian in diet. A further activity is represented by the breeding of small fishes specially addicted to feed upon the aquatic larvae of mosquitoes. These are supplied in thousands to municipalities and other local authorities at a nominal price for introduction into mosquito haunted sheets of water. These anti-malarial operations have proved most successful in those places where the local authorities have given proper attention to the direction given. The educational work of the Department is becoming one of its most important branches whether it being specially training teachers for schools in fishing villages in training men in the technology of curing, canning and oil manufacture, in co-operative propaganda and in the supply of zoological specimens for the use of colleges, classes and museums. The last named has filled a long felt want and is contributing materially to the advancement of the study of zoology throughout India. There is now no need to obtain specimens from Europe.

The development of deep sea fishing is engaging the attention of Government since did travel grounds are indicated off Cape Comorin extending over an area of some 4,000 square miles. Other prominent areas are known elsewhere but so far the limiting factors are the lack of cold storage accommodation at any port in the Presidency and the want of a deep water harbour in the south where steam trawlers can discharge direct into stores. An experiment in deep sea fishing made recently with the help of a motor launch and Danish beam net failed due to the unsuitability of the launch employed. For the purpose of deep sea fishing experiments and for other requirements of the Department such as economical salt transport and pearl fishery a second hand admiralty trawler T.L.S. was purchased during the year and reconditioned at a cost of Rs. 850. The trawler arrived at Tutuam on the 1st April. As the South-west monsoon was to commence shortly she could not be kept at the open roadstead in Tutuam and was therefore brought to safe anchorage at Pamban. She proceeded to Colombo in the second week of October for bottom cleaning in the Government slipway there and having returned to Pamban she will be engaged from the 15th November till the end of March 1926 in transporting salt from Tutuam to the fish curing yards on the west coast. With the help of this vessel, it is also proposed to carry on researches regarding the location of shoals and migration or important edible fish.

Welfare Work.—A remarkable feature in the work of the Madras Fisheries Department is the energy which it devotes to the improvement of the condition of the fisherfolk. On Sir Frederick Nicholson's initiative, the depart-

ment has always recognised the duty of spreading among them education and the habits of thrift, temperance and co-operation. The work has been specially successful on the west coast. The number of fishermen's co-operative societies in 1925-26 was 60. These societies it is reported worked satisfactorily, allowance being made for the inexperience and illiteracy of the members. But the formation and working of co-operative societies are not the only social activities among the fishermen. There is a vigorous temperance society at Manakore. The Collector of South Kanara has granted sites for the construction of village halls for the fishermen in two villages and the fishermen have themselves collected Rs. 3,000 for the building. In another village Kizhur the fishermen have already completed a building in which they hold meetings while one elementary school carries on its work in the same building. In Madras itself at Nadakkuppam a temperance organisation has got to work with the assistance of the Fisheries Department. To promote the education of fishermen a training institution was opened in the middle of 1918 at Calicut to train teachers to work in elementary schools for the fisherfolk. The pupil teachers under training are familiarised with the work carried on in the fishery stations at Tannur and Chullyam. They are given practical instructions in fishing a boat having been purchased for the purpose. By the end of June 1925 11 schools for the fisherfolk were being maintained by the department on the west coast with a total of 2,294 pupils. In some places the villages themselves start the schools and then hand them over to the department. In other places schools were opened by the department at the request of the fishermen. Local men are appointed as honorary managers of schools.

Bengal & Bihar & Orissa

The fishing value of this extensive deltaic region lies primarily in the enormous area occupied by inland waters—rivers, creeks, jheels and swamps—to say nothing of paddy fields and tanks. These swarm with fish and as the Hindu population are free to a large extent from the aversion to a fish diet which is widely prevalent among the better castes in the south the demand for fish is enormous. Rice and fish are indeed the principal mainstays of the population and not less than 60 per cent of the people consume fish as a regular item of diet. It is calculated that 1.6 per cent of the population is engaged in fishing and its connected trades, a percentage that rises to 2.6 in the Presidency. Raj Shahi and Dacca Divisions 644,000 persons in Bengal subsist by fishing with 324,000 maintained by the sale of fish, and this in spite of the fact that fishing is not considered an honourable profession. As a fresh-water fisherman the Bengali is most ingenious in his traps and other devices exceedingly clever and effective—in many cases too effective—so eager is he for immediate profit, however meagre this may be. The greatest inland fishery is that of the hilsa (*Opsanus beta*) which annually migrates from the sea in innumerable multitudes to seek spawning grounds far up the branches of the Ganges and the other great rivers. Other valued and abundant fishes are the rohu (*Labeo rohita*) and the katla (*Catla*

called *ratigola* (*Cirrhion ratigola*) prawns and shrimps abound everywhere. Of important fishes taken in the lower reaches of the rivers and in the great network of creeks spread throughout the Sunderbans, the *bekti* (*Lateolabrax*) and the mullets are the most esteemed apart from these estuarine fish the most valuable sea fishes are the *manca* fishes (*Polynemus*) pomfrets. The sea fisheries are as yet little exploited, the fishermen of Orissa where alone coastal fishing is of any local importance, having no sea craft save *tatazars* of inferior design and construction.

Following the inquiry begun in 1908 by Sir K. G. Gupta an investigation of the steam trawl possibilities of the head of the Bay of Bengal was undertaken the trawler *Golden Crown* being employed for the purpose. The results showed that there are extensive areas suitable for trawling and capable of yielding large quantities of high class fish. Much attention was devoted during these trawl cruises to the acquisition of increased knowledge of the marine fauna, the results being published in the Records and Memoirs of the Indian Museum. For various reasons the chief perhaps being the hostility of vested interests, the lack of cold storage facilities and the loss of time involved by the trawler having to bring her catches to Calcutta instead of sending them by a swift tender the experiment was financially a failure and was dropped. With ever increasing demand for fish in Calcutta and the concurrent rise in prices, the prospects of remunerative steam-trawling are now much more steam-trawling companies being floated in the immediate future. The trade is a difficult one to organize and without a rare combination of technical fishery knowledge and far-sighted and comprehensive organization the danger run by the investing public will be considerable. Originally one Fisheries Department served the needs of the two provinces of Bengal and Bihar and Orissa. Separation was effected in after which fisheries in Bengal were administered by the Director of Agriculture. The Bengal Fishery Department was abolished under retrenchment in 1923. In Bihar and Orissa, Fisheries form a section of the Department of Industries.

Government has ordered that the Bengal Fisheries Department be reconstituted on an improved basis as soon as funds permit. A Bengal Fisheries Department has of necessity a more limited scope for its activities than in the case of Madras. Practically no coastal minor industries exist, neither do the natural conditions lead us to suppose that any can be created without extreme difficulty and in the absence of a great trawl industry which alone might be able to call into existence factories devoted to the uplift of the general utilization of fish byproducts. Apart from this, much can be done by its officers for the uplift of the general fishing population with a view to free them from the tyranny of the *muhajans* (fish contractors and middle men) and enable them to put more capital into their business and to conduct it co-operatively. This is necessarily extremely slow work but the old Department made a beginning and once a few societies can be made successful the news of the benefits conferred on

the members will constitute the best possible form of propaganda. The temporary abolition of the Bengal Fisheries Department was regretted by many and it is hoped that it will soon be revived. The fishery wealth of Bengal is enormous and nothing but good can come of intensive investigation and propaganda.

Fresh water mussels are used extensively at Dacca in the manufacture of cheap pearl buttons and in many cases pearls also are found in the mussels which the pearl dealers gather and sell in the various parts of India. The Dacca bangle factories carry on an important local industry of very ancient standing their material is almost entirely obtained from the South Indian and Ceylon chank fisheries already alluded to.

Bombay

Whereas Bengal's fisheries are at present ordered principally to inland waters those of Bombay are concerned save in Sind almost entirely with the exploitation of the wealth of the sea. Bombay is favoured with a coast line abounding with excellent harbours for fishing craft a fair weather season lasting for some seven months, and a fishing population more alive to their opportunities and more daring than those of the other Presidencies. Bombay sea fisheries are of very great importance financially as well as economically and though there is less necessity for a special department to develop marine industries there is ample scope for most useful work in improving curing methods in introducing canning, and in the development of minor marine industries particularly those connected with the utilization of by-products. With this end in view the Director of Industries administered the subject of Fisheries from 1918 and had for a time two officers in the Department engaged upon fishery investigation and development. A steam trawler was bought for work in Bombay waters in 1920 and began work in May 1921 off Bombay. The experiment continued until February 1922 and the trawler was subsequently sold to the Government of Burma. At the outset the results seemed promising but the experiment as a whole showed that the cost of maintaining a trawler of the type used could not be met by sales of fish at current market rates. Cold storage has since been installed at the principal fish market in Bombay but for a trawler special facilities are needed also for rapid coaling supplying ice and stores and for unloading catches. More than this a change is needed in the medieval conditions under which the local fish market is conducted and there is much to be done in popularising little known species of edible fish such as karela, *patu*, *tambura* and particularly the ray or skate which formed in the average 25 per cent of the total catch but which is so little esteemed locally that it sold on the average at the rate of 100 lbs for a rupee.

Owing to retrenchment the appointments of Fisheries officers have been abolished.

The more important sea fish are pomfrets, soles and sea perches among which are included the valuable Jew fishes (*Siganus* spp.) often attaining a very large size and notable as the chief source of "fish-maws" or "scounds,

largely exported from Bombay for eventual manufacture into isinglass. The finest of Bombay fishing boats hail from the coast between Bassin and Surat. These boats are beautifully constructed, attain a considerable size and are capable of keeping the sea for weeks together. In the season they fish principally off the Kutch and Kathiawar coasts and in the month of the Gulf of Cambay. Their main method of fishing is by means of huge anchored stow-nets which are left down for several hours and hauled at the turn of the tide. The chief catches are Bombil (Bombay ducks), pomfrits and jew fishes. The first named are dried in the sun after being strung through the mouth upon lines stretched between upright posts. South of Bombay the fishermen of Patbhari and Rajapur make use of another and better class of fishing boat, specially designed for use in drift-net fishing. Fine hauls of bonito are (a large form of mackerel) and allied fishes are often made during the season from September to January and later of shark and rayfish. For the latter especially large and powerful nets are employed. For part of the last season when fishing is not usually remunerative many of the larger Bombay fishing boats are employed as small coasters a fact which shows how large they run in size.

In Sind considerable sea fishing is carried on in the neighbourhood of Karachi chiefly for large and coarse fish, as shark, rays and jew fishes. The edible oyster trade of Karachi was once extensive, the creeks of the Indus producing a species of oyster superior to that found in Bombay and Madras backwaters and estuaries. Unrestricted exploitation of this of limited extent inflicted great harm and now when various salutary restrictions are imposed the beds are slow to respond. Occasionally large deposits of the wind wane oyster (*Pinctura pinnata*) are found in the Indus creeks and as these produce good pearls in abundance, Government leased the beds to the Luckhjee Huddar. The pearls are largely exported to China for use in medicine. Considerable fisheries exist in the River Indus chiefly for the fish known as palla which are annually leased out by Government for about Rs 20,000.

In the Gulf of Kutch two pearl fisheries exist, one for the true pearl oyster the other for the window pane oyster. The former is carried on by His Highness the Maharaja of Jamnagar the other partly by this Prince and partly by the administration of His Highness the Maharaja Gaikwar of Baroda. The latter industry owes its local existence to the enterprise of the Baroda Government which in 1900 obtained the services on deputation of Mr J. Hornell, formerly Director of Fisheries in Madras for the purpose of examining the marine potentialities of this Baroda territory in Kathiawar. One of the consequences was the discovery of large deposits of pearl-bearing window pane oysters until then unknown. Of late years these beds have produced annually from Rs 1,000 to Rs 25,000 in revenue, perhaps the best example we have in India of the profitable nature of well-directed scientific enquiry into fishery problems. The Baroda Government continuing their enlightened interest in the fishery developments, have had two officers trained in the Madras

Fisheries Department and now employ them in development work on the Baroda coast.

Experiments in canning are now in progress at one of the chief fishing centres on the Southern Kathiawar coast and already promise considerable success particularly with regard to pomfrits.

Burma

The exclusive right of fishing throughout the province of Burma being by custom of the country to Government and the Burma Fisheries Act provides for the protection of this right and for conceding the enjoyment of it to the people subject to certain restrictions for the conservation of the fish. The work of the Burmese Government in this respect is a Herculean task involving as it does the taking of a line is generally viewed with disfavour by the Burman Buddhists. In certain tracts this attitude is intensified where the proportion of the fisher folk is not only small but their economic conditions are more or less demoralised. Though fishing is generally denounced by Burman Buddhists, yet they consume the fish. The usual argument of the conservatives is that they have not taken the life of the fish and therefore have committed no sin. Where fishing is the principal means of livelihood of the majority as in the Delta Districts religious scruples tend to disappear.

Revenue.—The economic value of any industry or tract of country can to some extent be gauged by the revenue it yields. The fisheries yield a substantial revenue (about one-eighth of the total land revenue) and therefore they are one of the most important sources of national wealth. There are two methods of catching fish, namely by nets in the rivers and seas and by traps in coastal fisheries. The fishery revenue derived from net fisheries amounts to over four lakhs while that from the leased dredge amounts to more than 44 lakhs. Of this 10 per cent. comes from the Irrawaddy Division. The largest revenue comes from Mergui District where not only is the Pearl fishing industry carried on but also extensive collecting green snails and sea slugs are issued. Open lak, a pools of water and small rivers are leased as lease fisheries and are leased by Government to the highest and best bidder at public auction. Here the Irrawaddy Division equals in importance the rest of the province and of the five districts in the Irrawaddy Division, Maubin District alone yields as much as half of the whole division. Maubin District therefore stands easily first in respect of fishery revenue and out of the total collected in any year from the whole province this district alone contributes at least a quarter.

The Delta consists of a series of saucer-shaped islands many of which have embankments round the greater part of them along the north-east and west. In the hollows of these islands most of the fish come into spawn and with the floods which overflow the embankment during October the young fish come down-country from Upper Burma.

The principal kinds of fish caught in nets on the sea coast are (1) haddock (2) katha haung and (3) Kathahmwin. These are generally made into salt fish which fetch Rs 2 to Rs 3 per viss. The creek and fresh water fish from fisheries are generally ngaklin ngayay and nway. Most of them are sold fresh, but some are converted into salt fish. The fish

retention of forest growth is of vital importance on account of its influence on the storage of the rainfall and on the prevention of erosions and sudden floods

(c) Forests which afford a supply of valuable timbers for commercial purposes, such, for example as the teak forests of Burma the sal forests of Northern, Central and North Eastern India and the deodar and pine forests of the North Western Himalaya.

(c) Minor forests containing somewhat inferior kinds of timber and managed for the production of wood fodder grazing and other produce for local consumption these forests are of great importance in agricultural districts

(d) Pasture lands—These are not forests in the generally understood sense of the term but grazing grounds managed by the Forest Department merely as a matter of convenience

These four classes of forest are not always sharply divided from each other and one and the same tract may to a certain extent be managed with more than one object

Administration—The forest business of the Government of India is carried out in the Department of Education Health and Lands. The Inspector General of Forests is the head of the Forest Department and is the technical adviser to the Government of India in forest matters. Under the Constitution of 1919 Forests were made a transferred subject to Bombay and Burma where they had long been administered by the Provincial Governments and in 1924 the Reforms Inquiry Committee presided over by the Hon. Sir Alexander Muddiman, Home Member of the Government of India recommended that they be transferred to other provinces now unless any local Government on examination of the position can make out a convincing case against the transfer in its own province

Territorial charges—The various provinces are divided into one or more Forest Circles each in charge of a Conservator of Forests provinces containing three or more circles also have a Chief Conservator who is the head of the Department for his province. Circles are divided into a number of Forest Divisions in charge of members of the Imperial or Provincial Forest Service these Divisions in most cases correspond to civil districts. Each Division contains a number of Ranges in charge of junior members of the Provincial Service or of Forest Rangers or Deputy Rangers heavy Divisions are also sometimes divided into Subdivisions. The Ranges are further subdivided into a number of beats or protective charges held by Forest Guards or in some cases by Foresters

Non-territorial charges—Apart from territorial charges there are various important posts of a non territorial nature connected with Forest Research and Education the preparation of Forest Working Plans, and other special duties

The Forest Service—The Forest Service comprises three branches—

(1) The Indian (Imperial) Service with a sanctioned total personnel of 999 officers consisting of the Inspector General of Forests

Chief Conservators Conservators Deputy and Assistant Conservators Of these 353 are to be recruited direct to the service and the balance obtained by promotion from the Provincial Forest Service The officers of this service are recruited as probationers—

- (a) by direct appointment in the United Kingdom and India and
- (b) by promotion from the Provincial Forest Service in India

Recruitment in the United Kingdom and in India of candidates nominated for direct appointment is carried out under regulations laid down by the Secretary of State for India and the Government of India respectively Candidates for direct appointment in the United Kingdom are required to have obtained a degree with honours in some branch of Natural Science in a University of England Wales or Ireland, or have passed the final B.Sc. examination in Pure Science in one of the Universities of Scotland. A degree in Applied Science is not considered as fulfilling these conditions Candidates are required to produce evidence that they have a fair knowledge of either German or French. Weight is attached to the possession of a diploma or degree in Forestry

Candidates for direct appointment in India are required to possess an Honours or a first class degree in Science or an M.Sc. degree of any class of a University incorporated by law in India

Probationers are at present trained at a University possessing a forest school approved by the Secretary of State (Oxford Cambridge and Edinburgh at present) this training being supplemented by a practical course, partly on the continent of Europe

The process of Indianisation is steadily proceeding, as may be judged from the fact that out of a total of 7 probationers recruited in 1924 four were Indians. In addition two more Indians who were fully trained were appointed on probation. The strength of the directly recruited cadre is according to the latest official return 314 while 19 probationers are under control in Great Britain

(2) The Indian Forest Engineering Service—This service was created in 1919 and at present consists of 17 Forest Engineers

(3) The Provincial Service—Formerly it consisted of Extra Deputy and Extra Assistant Conservators of Forests. All Extra Deputy Conservators who were considered to be fully qualified to hold a major charge were transferred to the Imperial Forest Service in 1920 except for five unpromoted officers the class of Extra Deputy Conservators has been abolished and the service now consists of Extra Assistant Conservators only. The fixation of the strength of the personnel of the service rests with the local Governments

Officers of this service are eligible for promotion to 14 per cent of the posts in the Indian Forest Service such promotion being made by local Governments. These officers are recruited and trained in India their recruitment being a matter for the local Governments. A certain number of posts in this service are filled by the

promotion of specially promising Rangers. A two years course of training for the Provincial Service is conducted by the Government of India at the Forest Research Institute and College Dehra Dun and it is open to local Governments on payment of prescribed fees to depute candidates to undergo that course provided they are qualified for admission under the rules governing the course.

(4) The Subordinate Service consisting of Forest Rangers (about 840), Deputy Rangers (about 900), Foresters (about 2,000) and Forest Guards (about 11,500). The Rangers are at present trained at three different centres—the Forest College at Dehra Dun (for provinces other than Burma, the Central Provinces and Madras), the Burma Forest School at Pymmana (for Burma) and the Madras Forest College at Coimbatore (for Madras and the Central Provinces). These three institutions were established in 1878, 1898 and 1912 respectively. The training of subordinates below the rank of Ranger is carried out in various local forest schools and training classes.

Research.—For the first fifty years of the existence of the Forest Department in India no attempt was made to organize the conduct of forest research and thus to co-ordinate and elaborate the scientific knowledge so necessary to successful economic working. A commencement in organized forest research was at last made in 1906 by the establishment, at the instance of Sir Sainthill Rardly Wilmot, then Inspector-General of Forests of a Forest Research Institute at Dehra Dun. The Forest Research Institute which is under the administrative control of the Inspector-General of Forests is in the charge of a President. There are five main branches of research, namely Silviculture, Forest Botany, Forest Economic Products, Entomology and Chemistry, each branch being in charge of a research officer. In addition specialists are appointed temporarily when necessary and are attached to the Institute to carry out investigations in subjects of particular economic importance. Thus a paper pulp expert has been employed for some time to investigate possible new sources of paper making materials of which the forests of India contain abundant supplies. Besides this there are the Seasoning, the Timber Testing and the Wood Preservation experts engaged temporarily on short term contracts. Indian Assistants have been appointed under them to receive the necessary technical training and experience in these subjects with the object of eventually taking the place of experts if and when properly qualified.

Since 1906 research work has been prosecuted energetically so much so that in 1920 a new scheme was sanctioned for the expansion of the staff and site of the Institute. Since then new land has been acquired on which new buildings are being built for accommodating the various expanded branches and the new machinery obtained from the United Kingdom. As a result of this and the employment of specialists in Seasoning, Timber Testing and Wood Preservation steady progress is being made in the investigations which should ultimately lead to the fuller and better utilization of the raw products produced by Indian forests.

Forest Products.—Forest produce is divided into two main heads—(1) Major produce that is timber and firewood, and (2) Minor produce comprising all other products such as bamboos, leaves, fruits, fibres, grass, gums, resins, barks, animal and mineral products, etc. The average annual outturn of timber and fuel from all sources during the quinquennium ended 31st March 1924 the latest date for which statistics are available was 36,06,40,000 cubic feet against an average of 30,72,00,000 cubic feet per annum attained in the preceding quinquennium. The highest figure ever attained under this head occurred in 1921-22 when a total of 16,13,43,000 c.ft. was reached, the year 1922-23 coming next with 35,38,90,000 c.ft. The figures for 1921-22 and 1922-23 represent respectively 2.5 and 2.4 c.ft. per acre of all classes of forests. For the year 1923-24 the yield in 1923-24 was 3.7 c.ft. per acre as compared with 3.5 c.ft. per acre in 1922-23, the last year of the last preceding quinquennium. This year 1923-24 was marked by a phenomenal output of teak in Burma, viz. 60,00,000 tons (30,00,00,000 cubic feet) which was more than 74 per cent above the average annual output of the preceding quinquennium. With the output of teak for the year the revenue in Burma soared to Rs. 2,1,18,784 and the surplus to Rs. 1,70,33,632. The total outturn for the five years amounted to 1,47,83,49 tons, an increase of 7,01,000 tons or 44 per cent over the output in the preceding quinquennium.

The figures for the last quinquennium show that in 1923-24 the rate of timber extracted by Government agency to that removed by purchasers was 5 to 2.5 compared with a ratio of 6 to 2.7 in 1919-20. During the period the outturn removed by Government agency rose by 41 per cent, whilst that removed by purchasers increased by 19 per cent. Timber and fuel to the value of Rs. 11,140 lakhs and minor products including bamboos and grass valued at Rs. 375 lakhs were removed by purchasers during the period. For the quinquennium 1914-19 the figures were Rs. 10,190 lakhs and Rs. 350 lakhs respectively.

Reviewing the figures of outturn Government in a report issued in October 1925 says: "The results on the whole considered, the general trade depression are most satisfactory and point to more intensive working of the forests and to better exploitation."

Forest Industries.—The important role which the forests of a country play in its general commercial welfare and in providing employment for its population is not always fully recognized. Thirteen years ago it was estimated that in Germany work in the forests provided employment for 1,000,000 persons, while 3,000,000 persons earning £30,000,000 a year were employed in working up the raw material yielded by the forests. If accurate estimates were available for India, they would no doubt show that apart from the jungle population which is directly dependent on the forests and the large numbers of wood-cutters, sawyers, carters, carriers, raftmen and others working in and near them, employment on an excessive scale is provided to persons engaged in working up the raw products. Among these latter may be mentioned carpenters, wheelwrights, coopers, boat-builders, tanners, rop-makers, lac-manufacturers, basket-makers, and

many other classes of skilled labourers. The Indian census shows over a million people and their dependents so employed in British India and nearly a further half million in Native States, but these are probably below the actuals as much forest labour is not whole-time labour devoting seven or eight months in the year to forest work and the rest to agriculture. With the opening up of the forests the extension of systematic working the wider use of known

products and the possible discovery of new products a steady and extensive development of industries dependent on the forests of India may be confidently anticipated in the future.

Financial Results—The steady growth of forest revenue expenditure and surplus during the past 50 years is shown in the following statement which gives annual averages for quinquennial periods—

Financial Results of Forest Administration in British India from 1864-65 to 1923-24 (in lakhs of rupees)

Quinquennial period	Gross revenue (average per annum)	(Expenditure average per annum)	Surplus (average per annum)	Percentage of surplus to gross revenue
	Lakhs	Lakhs	Lakhs	Lakhs
1864-65 to 1868-69	27.4	25.8	13.6	36.4
1869-70 to 1873-74	53.3	39.3	17.0	30.2
1874-75 to 1878-79	66.6	45.8	20.8	31.1
1879-80 to 1883-84	88.1	56.1	32.1	36.4
1884-85 to 1888-89	118.7	74.3	42.4	36.2
1889-90 to 1893-94	150.5	86.0	78.5	48.1
1894-95 to 1898-99	177.2	88.0	79.2	44.7
1899-1900 to 1903-04	196.6	112.7	63.9	42.7
1904-05 to 1908-09	227.6	141.0	116.0	45.1
1909-10 to 1913-14	266.0	163.7	132.3	44.7
1914-15 to 1918-19	371.3	211.1	160.2	42.1
1919-20 to 1923-24	551.7	367.1	184.6	38.5

The gross revenue and surplus were Rs 484.2 lakhs and Rs 179.4 lakhs in 1918-19 and Rs 544.9 lakhs and Rs 195.6 lakhs in 1923-24 respectively. The surplus rose from Rs 1.79 42.725 in 1918-19 to Rs 2.19 12.540 in 1919-20 but during the next three years it steadily decreased again, again to Rs 1.84 60.547 during the last year of the quinquennium. The surplus in 1923-24 represents an average of 2.1 annas per acre of all classes of forest against 1.8 annas in 1918-19. The total surplus rose from Rs 1.79 42.725 in 1918-19 to Rs 1.95 60.943 in 1923-24. Government, reviewing the figures state, "Financially the Forest Department has had during the quinquennium to undergo a severe strain even since the slump set in following on the short lived post-war boom in trade. But development solely with a view to increasing the resources and earning capacity of the forests has never been lost sight of. Judging by the perceptible improvement in the general financial results all round it is confidently expected that the improvements initiated in this quinquennial period will produce much better results when the slump ends."

Prospects.—The past work of the Forest Department has already borne fruit not only in a steady rise of revenues but also in the improved condition of the forests resulting from careful protection and tending. Much has been done in the way of opening up the forests to regular exploitation but there is still room for enormous development in this respect for there are extensive areas of valuable forest as yet almost untouched and these represent a vast capital locked up and not only lying idle

but even deteriorating. Perhaps the two most pressing needs at present are the introduction of improved silvicultural systems and the extension of roads and other export works to facilitate and cheapen extraction. These two must proceed simultaneously since they are inter-dependent for it is obvious that timber and other produce can be extracted far more economically if it is available in large quantities within a limited radius than if it is scattered in small quantities over large tracts of country. Indeed this question must often decide whether extraction is possible or not. Silviculture teaches us how to effect this concentration and is therefore the bed rock on which future results financial and otherwise must rest. It is of little avail to seek and develop new markets for timbers and other products if these cannot be produced in regular and sufficient quantities and extracted at a reasonable cost.

Forest Products Exploitation.—The exploitation by the Forest Department as a Commercial Department on business lines of the great timber forests which are among the most valuable natural assets of the country, continues to attract the special attention of the various local Governments. In Madras, for instance the working of the Forest panchayat system, whereby the increased knowledge of the difficulties of forest administration which the villager obtains when he has a voice in forest management is bringing home to him an understanding of the necessity for that administration. A further important step taken in regard to forest exploitation was the recruitment of a Chief Forest Engineer and a Logging

(a) Includes Delhi Province and the British Parganas of Meerut (Central India).
 (b) Unclaimed State forests or public forest lands as they are often called include in many provinces all unoccupied waste often entirely devoid of trees. So the statistics do not necessarily represent the wooded area.
 (c) Including Rs. 1 16 907 our account of receipt under the hill areas. For St. College.
 (d) Including expenditure under the following heads of the sums stated against them—Imperial (Rs. 1 18 903) Imperial Forest College (Rs. 8 14 038)
 (e) Including debits under the following heads of the sums stated against them—Imperial (Rs. 1 18 903) Imperial Forest College (Rs. 7 08 380)
 (f) Includes 60 598 square miles for Federated Shan States

(g) Excluding figures for Shan States and Karen

Engineer from America. In Burma the work under way in the Government Timber Depot at Rangoon proves to be of great value to Government from the point of view of revenue and of considerable importance to the public from the point of view of industrial development. Research work on the seasoning of timbers has been started and results which promise to be of great value have already been obtained. Experimental work on the manufacture of furniture and in other similar directions are expected to give a value to a number of different timbers which are at present more or less unknown. The Myittha River Training Works started in 1905 which have since then been continued for the sale of Government teak timber are of more than departmental interest. These works have also proved of great value to local people inasmuch as they have led to the reclamation of a very considerable amount of land which was previously too low lying and swampy to be fit for cultivation. In the United Provinces the institution of the Government Sawmill and Turnery the Government Central Wood Working Institute and the

Resin Distillery have led to important results. These and many other examples which could be quoted go to show that local Governments are fully alive to the importance of exploiting their forest resources to the fullest possible extent for the benefit of the country.

Agencies.—An agency has been established in India by the Government of India for the sale of Government timber and it is at present held by Messrs. Martin & Co. Calcutta. The Government of India have also appointed Messrs. W. W. Howard Bros. London as their agents in England for the sale of Indian timbers. Local Governments and the Andamans especially make full use of these two agencies for the sale of their woods and the London agency has in addition been the direct means of bringing to the notice of outside countries the immense possibilities of India's wealth in this direction.

Bibliography.—A large number of bulletins and other publications has been issued by the Forest Research Institute and of these a list can be obtained from the Superintendent Government Printing, India Calcutta.

PAPER MAKING

There are five large paper mills in the country working on up-to-date Western lines viz., at Titagarh, Kankinara and Raniganj in Bengal the Upper India Copper Mills at Lucknow and the Ray Mill at Poona. There are also two smaller mills at Bombay and Surat which make only country paper and there are one or two other mills which recently were not working. The five large mills have a large Government connection, as the greater part of Government orders for paper is placed in India.

During the past year an interesting experimental paper making plant has been installed at the Government of India Forest Research Institute at Dehra Dun. Specially designed to incorporate a new system patented by Mr. Raitt Cellulose expert to the Government of India the object of this plant is to test the various paper making fibres which are available over vast forest and hill areas in India and Burma and thus encourage the establishment of pulp and paper mills on a commercial scale.

After many delays the Carnatic Paper Mills Company commenced operations at Balahundry on the Godavari river during the year and it is estimated that the daily output will be ten tons of pulp and five tons of paper made from bamboo and paddy straw. In Southern India the Sri Minakshi Paper Mills established many years ago as a small concern in Travancore State appears to have taken a new lease of life and has ordered a new plant capable of turning out fifteen tons of paper per day whilst in Assam a new concern has been formed and is said to be waiting for the arrival of its plant. At Chittagong a new plant for manufacturing paper pulp from bamboo has commenced operations whilst another company has obtained a comprehensive concession for Bhabhar grass

in the Punjab and is erecting a factory near the headworks of the Western Jumna Canal about 400 miles from Lahore.

The possibility of utilizing the dense growths of bamboo in the hinterland of Uttar Pradesh has again been under consideration during the year and the project has been investigated afresh by Mr. Raitt on behalf of the Government of Bihar and Orissa. Mr. Raitt estimates that in this area alone there is sufficient raw material for an output of 10,000 tons of paper pulp per annum.

Raw Materials.—The existence of the local industry depends chiefly on the supply of Sabel grass which on account of unfavourable seasons sometimes yields short crops. It is of great importance therefore to look for materials according to a constant output and various reports have been published on the available paper making materials. Considerable attention has been devoted to **Bamboo** since in 1905 when it was found that this plant—of which there are four chief varieties in India—yields a fibrous paper stock which made a quality of paper superior to esparto grass and at a considerably less cost. It was at that time estimated that one acre of bamboo would yield 10 tons of dried stems equivalent to 5 tons of merchantable cellulose. In 1905 Mr. R. W. Sindall was invited by Government to visit Burma with a view of enquiring into the possibility of manufacturing paper pulp. His report on the subject appeared in March 1906. He made numerous experiments with bamboo and woods of Burma and laid down lines along which further enquiry should be made. Subsequently Mr. W. Raitt, a pulp expert, was engaged at the Forest Research Institute in conducting tests on the treatment of bamboo by the soda and sulphate processes, the treatment of bamboo before

boiling with remarks on the utilisation of nodes and internodes. His results were embodied in the Report on the investigation of Bamboo or Production of Paper pulp published in 1911. Mr R. S. Pearson of the Forest Service Dehra Dun, as the outcome of enquiries made throughout India published in 1912 a note on the Utilization of Bamboo for the manufacture of Paper pulp. The yield per acre from bamboo is larger than that of grasses usually used for paper. The cost of working into pulp has been estimated to yield a product cheaper than imported unbleached spruce sulphite and unbleached abal grass pulp. In 1916 Mr. Dhruva Sumanas published a pamphlet *Dendrocalamus Strictus* Bamboo of the Dangs as the result of investigations carried on in Banasa State.

In a paper read before the Royal Society of Arts in 1921 Mr. Bhatt gave an answer to the question **What India can do to fill the gap in the world's shortage of paper?** He said that he thought it was a modest estimate to say that from bamboo taking only that which is available under possible manufacturing conditions Burma, Bengal and South West India could produce ten million tons of pulp per annum and Assam from Savannah grasses three million. India could therefore produce pulp for the whole world.

The leading Indian paper grass (or the last thirty years has been the *babbar*

or abal grass of Northern India. It is a perennial grass plentiful in drier tracts from Chota Nagpur and Rajmahal to Nepal and Garhwal. The Calcutta mills draw their supplies from Sahibganj, Chota Nagpur and the Nepal Terai. The quantity annually exported from Sahibganj is between three to four lakhs of maunds. The cutting in these districts is said to commence in October when the plants are six or seven feet high. Abal grass yields from 35 to 45 per cent of bleached cellulose. A report by Mr. K. S. Pearson, Forest Economist Dehra Dun on the use of elephant grasses in Assam was issued in 1914. The most important species of grass found in the areas in which investigation has been made are *Khasra* (*Saccharum spontaneum*) and *Batta* (*Saccharum saraeng*) with patches of *Nai* (*Phragmites barks*) on the more swampy ground. Hand samples of the above grasses were sent to England to be tested on a laboratory scale while several tons were sent to an Indian paper mill to be made into paper. The results were satisfactory and proved that a very fair quality of paper can be produced from these grasses at a relatively low price. Small samples of such paper can be obtained by persons interested in these grasses from the Forest Economist Forest Research Institute Dehra Dun, who can also supply further details.

Indian paper manufacture is protected by special provisions in the import tariff.

WIRELESS TELEGRAPHY AND TELEPHONY

Beam Stations—The year 1927 saw the commencement of beam wireless services on the Marconi system between India and the United Kingdom. Powerful transmitting and receiving stations erected at Poona and Bham, respectively by the Indian Radio Telegraph Company are connected by land lines with the Central Telegraph Office in Bombay, whilst stations at Singapore and Ceylon are similarly connected with the General Post Office in London and the circuits are so arranged that messages are exchanged between Bombay and London without intermediate handling at the Beam stations at either end. The huge aerial systems at Poona and Bham, each 2,500 ft. high, stand towers 27 feet in height are landmarks over a distance of many miles. The service was inaugurated by His Excellency the Viceroy on 23rd July 1927 at the Central Telegraph Office, Bombay, when His Excellency transmitted a message to the King and His Majesty's reply was received a few minutes later.

It is now worthy that the opening of the beam wireless service coincided with a reduction in rates by the cable company.

For reasons of economy most of the inland wireless stations in India have been practically closed down and placed in charge of Civil Maintenance parties which carry out tests twice a month the exceptions being Peshawar Radio, which maintains official communication with Kabul in Afghanistan and Kashmir in China and Pothohar Radio which receives British Official Wireless sent out from Oxford and

Rangoon and passes the messages to Reuters Agency for distribution to subscribing news papers.

The coast stations however have been maintained in a state of high efficiency and many improvements effected. The application of the Beam system to the high speed continuous wave wireless stations at Madras Port and Alingadun (Rangoon) has proved extremely satisfactory and a large portion of the traffic between Southern India and Poona is regularly worked by this direct route instead of the circuitous route via Calcutta. The traffic is interrupted occasionally by atmospheric interference, particularly during the hot weather but the difficulties have been largely overcome by handwork during the worst periods.

For many years the Bombay stations known as Bombay Radio was located on Booter Island in the Marathi but during 1927 a fine new station equipped with modern apparatus was re-located at a site at Santa Cruz just outside the limits of Bombay Municipality.

Radio telegrams exchanged with ships at sea by coast stations in India and Burma continue to increase in number and now total about 20,000 per annum. Official telegrams are exchanged with the British Naval station at Madras (Ceylon) via Bombay Radio. Regular services are also maintained between Burma and the Malay Peninsula via Rangoon and Luang and between Burma and Sumatra whilst radio traffic is passed between Madras and Colombo when the normal route is interrupted.

Wireless telephonic communication between pilot vessels lighthouses and shore stations are maintained by the Port Trusts at Bombay and Rangoon.

Safety at Sea—A noticeable feature of wireless development during the past two years has been the provision of direction finding apparatus at Bombay and Karachi and facilities at other coast stations whereby ships at sea equipped with direction finding apparatus can obtain bearings on coast stations and thus determine their position with a remarkable degree of accuracy. Improved arrangements for broadcasting time signals weather reports and navigational warnings from coast stations have also proved of value to ships at sea.

Broadcasting—For several years limited broadcasting services were maintained by Radio Clubs in Calcutta Bombay Madras Karachi and Rangoon and although the transmitting sets employed by them were of very low power the broadcasts were tuned in over practically the whole of India. The clubs were assisted financially by a Government contribution based upon the revenue from license fees but this did not nearly suffice to cover the cost of the transmissions and the greatest credit is due to the members of these clubs for the sporting manner in which they provided additional funds and undertook the entire responsibility for the programmes. Credit is also due to the Indian States and Eastern Agents for the loan of transmitting apparatus without which the broadcasts would have been impossible.

After negotiations extending over several years, an Indian Broadcasting Company was granted a license to establish broadcasting services upon lines similar to those of the British Broadcasting Corporation and transmitting stations were erected in Bombay and Calcutta the services at the former being inaugurated by His Excellency the Viceroy in July 1927 and the latter by the Governor of Bengal a month later. These stations have each an aerial input of three kilowatts the same as that of the L.O. stations in London of which they are practically duplicates. The programmes are so arranged that both Indian and European music are broadcast daily and the news bulletins and market and weather reports are read in two languages.

Bombay broadcasts normally on a wavelength of 357 metres and Calcutta on 370 metres. Reception in either of these cities, and for a distance of twenty or thirty miles around is possible on crystal sets of which a very large number have been sold. Valve sets are necessary for those living further afield but although there has been a considerable demand for these the sales have not reached expectation. One of the greatest difficulties in India is the maintenance of batteries which is no inconsiderable item when sets containing five or six valves are employed and it is partly with a view to overcoming this problem and to render broadcasting available on two valve sets in any part of India, that the Broadcasting Company is investigating the possibility of transmitting simultaneously no long and short waves.

Reports of the reception of foreign short-wave stations have been received from all parts of the country and upon several occasions the Bombay

station of the I. B. C. has relayed the programmes from the Dutch station P. O. J. but the results have not been entirely satisfactory.

Just as we go to press with this edition of the Year Book the Indian Broadcasting Company has sprung a bombshell on the public by announcing that its revenue from license fees is insufficient to meet expenses and hinting that there are in the country a very large number of people who come within the radio category of pirates—those who have neglected willfully or otherwise to purchase the license by which the Company owns the major portion of its income. The matter is now under discussion with the Government of India.

In addition to the Radio Clubs mentioned earlier new ones have been formed recently at Lahore and Bhubawal besides an Indian Radio Society with headquarters in Bombay.

Licenses—Broadcast receiving licenses are issued at Head Post Office at a fee of ten rupees per year and cover the use of receiving sets throughout British India except Maluchistan and the North West Frontier Province. Up till the end of October 1927 1928 such licenses had been issued 1103 of them in Bombay. It is believed however that the number has since increased very substantially. It uses for fixed stations for transmitting and experimental purposes are much sought after and despite a careful scrutiny of the applicants more than 300 have been issued. The number of traders in wireless apparatus who are required to take out special import licenses has increased considerably during the past year. This improvement must be ascribed primarily to the commencement of broadcasting (q.v.).

Prospects—The Government of India has always encouraged the development of wireless in India by private enterprise and it is to this source that India must look in the immediate future for internal radio communication. There are two most promising lines of development viz—

(a) Erection of small sets either for speech or morse in districts where no land line exists, and to link such districts with the existing landlines. In this connection it may be remarked that modern small radio sets are capable of using either morse or speech at will and if used for speech can be operated by the ordinary desk telephone instrument in daily use all over India.

(b) The use of radio as a substitute for land line to form the trunk telephone route between two cities which already have telephone facilities.

These will open up a new industry which if properly fostered would very soon extend its sales outside the limits of India. There is no doubt that the majority of parts for small radio sets could be more cheaply manufactured in this country than they can be imported and further such an industry would find the right kind of skilled labour already in India.

The Press.

The newspaper Press in India is an essentially English institution and was introduced soon after the task of organising the administration was seriously taken in hand by the English in Bengal. In 1773 was passed the Regulating Act creating the Governor-Generalship and the Supreme Court in Bengal and within seven years at the end of the same decade the first newspaper was started in Calcutta by an Englishman in January 1780. Exactly a century and a third has elapsed since not a very long period certainly a period almost measured by the life of a single newspaper. *The Times* which came into existence only five years later in 1785, but then the period of British supremacy is not much longer having commenced at Plassey only twenty three years earlier. Bombay followed Calcutta closely and Madras did not lag much behind. In 1783 the first Bombay newspaper appeared, *The Bombay Herald* followed next year by *The Bombay Courier* a paper now represented by *The Times of India* with which it was amalgamated in 1861. In Bombay the advent of the press may be said to have followed the British occupation of the island much later than was the case in Calcutta. In Calcutta the English were on sufferance before Plassey but in Bombay they were absolute masters after 1685 and it is some what strange that no Englishman should have thought of starting a newspaper during all those hundred and twenty five years before the actual advent of *The Herald*.

The first newspaper was called *The Bengal Gazette* which is better known from the name of its founder as *Hickey's Gazette* or *Journal*. Hickey like most pioneers had to suffer for his enterprising spirit though the fault was entirely his own as he made his paper a medium of publishing gross scandal and he and his journal disappeared from public view in 1782. Several journals rapidly followed Hickey's though they did not fortunately copy his bad example. *The Indian Gazette* had a career of over half a century when in 1833 it was merged into the *Bengal Harikara* which came into existence only a little later and both are now represented by *The Indian Daily News* with which they were amalgamated in 1896. No fewer than five papers followed in as many years, the *Bengal Gazette* of 1780 and one of these *The Calcutta Gazette* started in February 1794 under the avowed patronage of Government flourished still as the official gazette of the Bengal Government.

In 1821 a syndicate of European merchants and officials commenced the publication of *John Bull* in the East a daily paper which was intended to reflect Tory opinion in India and set an example to the Press generally in the matter of moderation and restraint. The name of this journal was altered to *The Englishman* by the famous Stockdale in 1836.

From its commencement the press was jealously watched by the authorities, who put serious restraints upon its independence and pursued a policy of discouragement and

rigorous control. Government objected to news of apparently the most trivial character affecting its servants. From 1791 to 1799 several editors were deported to Europe without trial and on short notice whilst several more were censured and had to apologise. At the commencement of the rule of Wellesley Government promulgated stringent rules for the public press and instituted an official censor to whom everything was to be submitted before publication, the penalty for offending against these rules to be immediate deportation. These regulations continued in force till the time of the Marquis of Hastings who in 1818 abolished the censorship and substituted milder rules.

This change proved beneficial to the status of the press for henceforward self-respecting and able men began slowly but steadily to join the ranks of journalism which had till then been considered a low profession. Sir R. B. Cunningham, one of the ablest and best known of Anglo-Indian journalists of those days availed himself of this comparative freedom to criticise the authorities, and under the short administration of Adam a civilian who temporarily occupied Hastings' place he was deported under rules specially passed. But Lord Amherst and still more Lord William Bentinck were persons of broad and liberal views and under them the press was left practically free though there existed certain regulations which were not enforced though Lord Clare who was Governor of Bombay from 1831 to 1835 once strongly but in vain urged the latter to enforce them. Metcalfe who succeeded for a brief period Bentinck removed even these regulations, and brought about what is called the emancipation of the press in India in 1835 which was the beginning of a new era in the history of the Indian press. Among papers that came into being was the *Bombay Times* which was started towards the close of 1838 by the leading merchants of Bombay, and which in 1861 changed its name to the *Times of India*. *The Bombay Gazette* founded in 1791 ceased publication in 1914.

The liberal spirit in which Lord Hastings had begun to deal with the press led not only to the improvement in the tone and status of the Anglo-Indian press but also to the rise of the Native or Indian Press. The first newspaper in any Indian language was the *Samachar Darpan* started by the famous Serampore Missionaries Ward, Carey and Marshman in 1819 in Bengal, and it received encouragement from Hastings who allowed it to circulate through the post office at one-fourth the usual rate. This was followed in 1823 by a purely native paper in Bombay called the *Bombay Samachar* which still exists, and thus was laid the foundation of the Native Indian Press which at the present day is by far the largest part of the press in India numbering over 650 papers.

From 1835 to the Mutiny the press spread to other cities like Delhi, Agra, Gwalior, and even Lahore, whereas formerly it was chiefly confined to the Presidency towns. During

the Mutiny its freedom had to be temporarily controlled by the Gagging Act which Canning passed in June 1857 on account of the license of a very few papers, and owing still more to the fear of its circulating intelligence which might be prejudicial to public interests. The Act was passed only for a year at the end of which the press was once more free.

On India passing to the Crown in 1858 an era of prosperity and progress opened for the whole country in which the press participated. There were 19 Anglo-Indian papers at the beginning of this period in 1858 and 20 Native papers and the circulation of all was very small. The number of the former did not show a great rise in the next generation but the rise in

influence and also circulation was satisfactory. Famous journalists like Robert Knight, James Maclean and Hurria Mookerji flourished in this generation. The *Civil and Military Gazette* was originally published in Simla as a weekly paper the first issue being dated June 23rd, 1872. Prior to and in the days of the Mutiny the most famous paper in Northern India was the *Hofuswale* originally published at Meerut but afterwards at Agra and then at Ambala. After a lively existence for a few years in Simla the *Civil and Military Gazette* acquired and incorporated the *Hofuswale* and in 1876 the office of the paper was transferred from Simla to Lahore and the *Gazette* began to be published daily.

INDIAN PRESS LAW

Before 1836 all printing of books and papers was subject to licence by the Governor General in Council and the licences were issued or refused at the discretion of Government. Act XI of 1835 repealed the old Regulations and merely required registration of the printer and made a few minor requirements. That Act was replaced in 1867 by the present Press and Registration of Books Act and except for an Act which was in force for one year during the Mutiny there was no further legislation directly affecting the Press until 1875 when the Vernacular Press Act was passed. That Act was repealed during the Viceroyalty of Lord Ripon in 1882. From that date until 1907 Government made no attempt to interfere directly with the liberty of the Press, the growth of sedition being dealt with in other ways by the passing in 1868 of section 124A of the Penal Code in its present form which had been originally enacted in 1870 and by the introduction into the Penal Code of section 153A and into the Criminal Procedure Code of section 108. There were a certain number of prosecutions under those sections up to 1907 but the dissemination of sedition through the Press continued. In 1908 the Newspaper (Incitement to Offences) Act was passed which dealt with papers inciting to murder or to acts of violence. This Act failed to have the desired effect.

The Indian Press Act, 1910 was a measure of wider scope the main object of which was to ensure that the Indian press generally should be kept within the limits of legitimate discussion.

The Act deals not only with incitements to murder and acts of violence, but also with other specified classes of published matter including any words or signs tending to seduce soldiers or sailors from their allegiance or duty to bring into hatred or contempt the British Government, any Native Prince, or any section of His Majesty's subjects in India or to intimidate public servants or private individuals.

The different sections of the Act have in view (i) Control over presses and means of publication, (ii) control over publishers of newspapers, (iii) control over the importation into British India and the transmission by the post of objectionable matter, (iv) the suppression of seditious or objectionable newspapers, books, or other documents wherever found.

Repeal of Press Legislation—By the autumn of 1917 the Government of India had begun to consider the desirability of modifying at least one section of the Press Act to which great exception had been taken on account of the wide powers that it gave. Finally after more than once consulting Local Government a Committee was appointed in February 1921 after a debate in the Legislative Assembly to examine the Press and Registration of Books Act, 1867 and the Indian Press Act, 1910 and report what modifications were required in the existing law. That Committee made an unanimous report in July 1921, recommending—

(1) The Press Act should be repealed.

(2) The Newspapers Incitements to Offences Act should be repealed.

(3) The Press and Registration of Books Act and the Post Office Act should be amended where necessary to meet the conclusion noted below. (a) The name of the editor should be inscribed on every issue of a newspaper and the editor should be subject to the same liabilities as the printer and publisher, as regards criminal and civil responsibilities. (b) any person registering under the Press and Registration of Books Act should be a major as defined by the Indian Majority Act. (c) local Governments should retain the power of confiscating openly seditious leaflets subject to the owner of the press or any other person aggrieved being able to protest before a court and challenge the return of such document, in which case the local Government ordering the confiscation should be called upon to prove the seditious character of the documents. The powers conferred by Sections 18 to 15 of the Press Act should be retained. Customs and Postal officers being empowered to seize seditious literature within the meaning of Section 124A of the I.P.O. subject to review on the part of the local Government and challenge by any persons interested in the courts. (e) any person challenging the orders of Government should do so in the local High Court. (f) the term of imprisonment prescribed in Sections 12, 13, 14 and 15 of the Press and Registration of Books Act should be reduced to six months. (g) the provisions of Section 16 of the Press Act should be reproduced in the Press and Registration of Books Act.

Effect was given to these recommendations during the year 1922.

Press Association of India—At the end of 1915 this Association was formed in Bombay According to the articles of constitution its objects shall be to protect the press of the country by all lawful means from arbitrary laws and their administration from all attempts of the Legislature to encroach on its liberty or of the executive authorities

to interfere with the free exercise of their calling by journalists and press proprietors, and for all other purposes of mutual help and protection which may be deemed advisable from time to time Members pay a minimum subscription of Rs 10 annually the affairs of the Association are managed by a Council

Banking

An event of great importance in the history of Indian banking was the formation on the 27th January 1921 of the Imperial Bank of India by amalgamation of the three Presidency Banks of Bengal, Bombay and Madras.

The idea of a Central Banking establishment for British India was mooted as early as 1886 and was the subject of a minute by Mr James Wilson when Finance Member in 1889. Again in 1897 Mr Dickson the well known Secretary of the Bank of Bengal submitted detailed proposals for an amalgamation of the three Presidency Banks. On various later occasions the matter was brought forward without result and it was discussed by the Chamberlain Commission on Indian Finance and Currency in 1913. The present scheme which has come to fruition was however the result of a rapprochement on the part of the Banks themselves as a result of the experience gained during the war and the realisation of the desirability of strengthening and extending the Banking system in India.

The Presidency Banks—The history of the Presidency Banks in their relationship with Government falls into three well defined stages. Prior to 1862 the Presidency Banks had the right of note issue but were directly controlled by Government and the scope of their business was restricted by their charters. The second period was from 1862 to 1876. In 1862 the Banks were deprived of the right of note issue though by their agreements of that year they were authorised to transact the paper currency business as agents of Government. As compensation for the loss of their right of issue they were given the use of the Government balances and the management of the treasury work at the Presidency towns and at their branches. The old statutory limitations on their business were at the same time greatly relaxed, though the Government's power of control remained unchanged. In 1866 the agreements were revised and the paper currency business was removed from their control and placed under the direct management of Government. The third period dates from the Presidency Banks Act of 1876 by which nearly all the most important limitations of the earlier period were reimposed. Put very briefly, the principal restrictions imposed by this Act prohibited the Banks from conducting foreign exchange business from borrowing or receiving deposits payable out of India and from lending for a longer period than six months, or upon mortgage or on the security of immovable property or upon promissory notes bearing less than two independent names or upon goods unless the goods of the title to them were deposited with the Bank as security. At the same time Government abandoned direct interference in the management ceasing to appoint official directors and disposing of their shares in the Banks. The Banks no longer enjoyed the full use of the Government balances. Reserve Treasuries were constituted at the Presidency towns into which the surplus revenues were drawn and the balances left at the disposal of the Banks were strictly limited.

This system continued with only minor modifications until 1920. During the war however the policy was deliberately adopted of reducing the amount of the balances held in the Reserve Treasuries and leaving much larger balances with the Headquarters of the Presidency Banks in order to assist the money market.

The Imperial Bank—Under the Imperial Bank of India Act (XLVII of 1920) the control of the Bank is entrusted to a Central Board of Governors with Local Boards at Calcutta, Bombay and Madras and such other places as the Central Board with the previous sanction of the Governor-General in Council may determine. The Central Board of Governors consists of—

- (a) Managing Governors not exceeding two in number appointed by the Governor-General in Council on recommendation by the Central Board,
- (b) the Presidents Vice-Presidents and Secretaries of the Local Boards
- (c) the Controller of the Currency or other officer nominated by the Governor-General in Council and
- (d) not more than four non-officials nominated by the Governor-General in Council.

Representatives of any new Local Boards which may be constituted may be added at the discretion of the Central Board.

The Controller of the Currency and the Secretaries of the Local Boards are entitled to attend the meetings of the Central Board but not to vote under the agreement with Government. The Governor-General in Council is entitled to issue instructions to the Bank in respect of any matter which in his opinion vitally affects his financial policy or the safety of the Government balances and if the Controller of the Currency or such other officer of Government as may be nominated by the Governor-General in Council to be a Governor of the Central Board shall give notice in writing to the Managing Governors that he considers that any action proposed to be taken by the Bank will be detrimental to the Government as affecting the matters aforesaid such action shall not be taken without the approval in writing of the Governor-General in Council. Under the Imperial Bank of India Act provision was made for the increase of the capital of the Bank. The capital of the three Presidency Banks consisted of 32 crores of rupees in shares of Rs. 500 each fully subscribed. The additional capital authorised was 7½ crores in shares of Rs. 500 each of which Rs. 125 has been called up, making the present capital of the Bank Rs. 11½ crores, of which Rs. 5,82,50,000 has been paid up. The Reserve Fund of the Bank is Rs. 5,07,50,000 and the Balance Sheet of 30th June 1927 showed the Government Balance at Rs. 10,04,49,927 other deposits at Rs. 78,17,24,712 and cash Rs. 22,83,65,964 with a percentage of cash to liabilities of 27.37.

Class of Business.—The Imperial Bank of India Act follows the Presidency Banks Act of 1876 in defining absolutely the class of business in which the Bank may engage though the older limitations are modified in some minor points. It permits for the first time the constitution of a London Office and the borrowing of money in England for the purpose of the Bank's business upon the security of assets of the Bank, but not the opening of cash credits keeping cash accounts or receiving deposits in London except from former customers of the Presidency Banks. The Act provides for an agreement between the Bank and the Secretary of State and this agreement, which was signed on the 27th January 1911 and is for a period of ten years determinable thereafter by either party with one year's notice provides *inter alia* for the following important matters—

- (1) All the general banking business of the Government of India is to be carried out by the Imperial Bank.

(2) The Bank will hold all the Treasury Balances at Headquarters and at its branches. This involves the abolition of the Reserve Treasury system.

(3) Within five years the Bank undertakes to open 100 new branches of which the Government of India may determine the location of one in four. The branches and agencies of the three Presidency Banks prior to the date of amalgamation numbered 69 including the Colombo branch of the Bank of Madras. The Bank of Bengal had no branches prior to the proposal to transfer Government business to the Bank in 1881 but no less than 18 branches were established before 1868.

(4) The management of the Public Debt will continue to be conducted by the Bank for specified remuneration.

In Schedule 1 Part 1 of the Act the various descriptions of business which the Bank may transact are laid down and in Part 2 it is expressly provided that the Bank shall not transact any kind of banking business other than that sanctioned in Part 1

Briefly stated the main classes of business sanctioned are —

- (1) Advancing money upon the security of —
 - (a) Stocks &c., in which a trustee is authorised by Act to invest trust monies
 - (b) Securities issued by State aided Railways notified by the Governor General in Council
 - (c) Debentures or other securities issued under Act by or on behalf of a District Board
 - (d) Goods or documents of title thereto deposited with or assigned to the Bank
 - (e) Accepted Bills of Exchange or Promissory Notes
 - (f) Fully paid shares and debentures of Companies with limited liability or immovable property or documents of title relating thereto as collateral security where the original security is one of those specified in a, b, c, d and, if authorised by the Central Board in e.

(2) With the sanction of the Local Government advancing money to Courts of Wards upon security of estates in their charge

(3) Drawing accepting discounting buying and selling bills of exchange and other negotiable securities payable in India and Ceylon and subject to the directions of the Governor-General in Council, the discounting buying and selling of bills of exchange payable outside India for and from or to such Banks as may be approved

(4) Investing the Bank's funds in the securities referred to in (1) a, b, c

(5) Making Bank Post Bills and Letters of Credit payable in India and Ceylon

(6) Buying and selling gold and silver

(7) Receiving deposits

(8) Receiving securities for safe custody

(9) Selling such properties as may come into the Bank's possession in satisfaction of claims

(10) Transacting agency business on commission

(11) Acting as Administrator, for winding up estates

(12) Drawing bills of exchange and granting letters of credit payable out of India for the use of principles in connection with (11) and also for private constituents for bona fide personal needs

(13) Buying, for the purpose of meeting such bills etc., bills of exchange payable out of India at any usance not exceeding six months

(14) Borrowing money in India

(15) Borrowing money in England upon security of assets of the Bank, but not otherwise

The principal restrictions placed on the business of the Bank in Part 2 are as follows —

(1) It shall not make any loan or advance —

(a) For a longer period than six months

(b) upon the security of stock or shares of the Bank.

(c) save in the case of estates specified in Part I (Courts of Ward) upon mortgage or security of immovable property or documents of title thereof

(2) The amount which may be advanced to any individual or partnership is limited

(3) Discounts cannot be made or advances on personal security given unless such discounts or advances carry with them the several responsibilities of at least two persons or firms unconnected with each other in general partnership

The Balance Sheet of the Bank as at 30th June 1927 was as follows —

LIABILITIES		Rs		a p		ASSETS		Rs		a p	
Subscribed Capital		11 25,00 000		0 0		Government Securities		18,77 01 035		0 1

THE EXCHANGE BANKS

The Banks carrying on Exchange business in India are merely branch agencies of Banks having their head offices in London, on the Continent, or in the Far East and the United States. Originally their business was confined almost exclusively to the financing of the external trade of India, but in recent years most of them while continuing to finance this part of India's trade, have also taken an active part in the financing of the internal portion also at the places where their branches are situated.

At one time the Banks carried on their operations in India almost entirely with money borrowed elsewhere, principally in London—the home offices of the Banks attracting de-

posits for use in India by offering rates of interest much higher than the English Banks were able to quote. Within recent years however it has been discovered that it is possible to attract deposits in India on quite as favourable terms as can be done in London and a very large proportion of the financing done by the Exchange Banks is now carried through by means of money actually borrowed in India. No information is available as to how far each Bank has secured deposits in India, but the following statement published by the Director-General of Statistics in India shows how rapidly such deposits have grown in the aggregate within recent years.

Exchange Banks Investments

Turning now to the question of the investment of the Banks' resources so far as it concerns India this to a great extent consists of the purchase of bills drawn against imports and exports to and from India.

The financing of the import trade originated and is carried through however for the most part by branches outside India, the Indian Branches are in the business consisting principally in collecting the amount of the bills at maturity and in furnishing their other branches with information as to the means and standing of the awace of the bank, and it is as regards the export business that the Indian Branches are more immediately concerned. The Exchange Banks have practically a monopoly of the port finance in India and in view of the dimensions of the trade which has to be dealt with the Banks would under ordinary circumstances require to utilise a very large proportion of their resources in carrying through the business. They are able however by a system of discount in London to limit the employment of their own resources to a comparatively small figure in relation to the business they really put through. No definite information can be secured as to the extent to which discounting in London is carried on but the following figures appearing in the balance sheet dated 31st December 1926 of the under-mentioned banks will give some idea of this.

LIABILITY ON BILLS OF EXCHANGE RE-DISCOUNTED AND STILL CURRENT

	£
Chartered Bank of India, Australia and China.	4,617,000
Eastern Bank Ltd.	952,000
Hongkong and Shanghai Banking Corporation	9,294,000
Mercantile Bank of India, Ltd.	3,735,000
National Bank of India, Ltd.	5,573,000
P & O Banking Corporation, Ltd.	11,074,000
	35,240,000

The above figures do not of course relate to re-discounts of Indian bills alone, as the Banks operate in other parts of the world also, but it may safely be inferred that bills drawn in India form a very large proportion of the whole.

The bills against exports are largely drawn at three months sight and may either be "clean" or be accompanied by the documents relating to the goods in respect of which they are drawn. Most of them are drawn on well known firms at home or against credits opened by Banks or financial houses in England and bearing as they do an Exchange Bank endorsement they are readily taken up by the discount houses and Banks in London. Any bills purchased in India are sent home by the first possible mail so that presuming they are re-discounted as soon as they reach London the Exchange Banks are able to secure the return of their money in about 16 or 17 days instead of having to wait for three months which would be the case if they were unable to re-discount. It must not be assumed however that all bills are re-discounted as soon as they reach London as at times it suits the Banks to hold up the bills in anticipation of a fall in the London discount rate while on occasions also the Banks prefer to hold the bills on their own account as an investment until maturity.

The Banks place themselves in funds in India for the purpose of purchasing export bills in a variety of ways of which the following are the principal —

- (1) Proceeds of import bills as they mature.
- (2) Sale of drafts and telegraphic transfers payable in London and elsewhere out of India.
- (3) Purchase of Council Bills and Telegraphic Transfers payable in India from the Secretary of State.
- (4) Imports of bar gold and silver bullion.
- (5) Imports of sovereigns from London, Egypt or Australia.

The remaining business transacted by the Banks in India is of the usual nature and need not be given in detail.

An interesting event in Indian Banking history is the recent entry in the Banking field here of one of the English "Big Five". This has been brought about by the acquisition of the business of Fox & Co., by Lloyd's Bank.

The following is a statement of the position of the various Exchange Banks carrying on business in India as at 31st December 1928 —

JOINT STOCK BANKS

Previous to 1906 there were few Banks of this description operating in India, and such as were then in existence were of comparatively small importance and had their business confined to a very restricted area. The rapid development of this class of Bank, which has been so marked a feature in Banking within recent years really had its origin in Bombay and set in with the establishment of the Bank of India and the Indian Specie Bank in 1906. After that time there was a perfect stream of new formations, and although many of the new Companies confined themselves to legitimate banking business, on the other hand a very large number engaged in other businesses in addition and can hardly be properly classed as Banks.

These Banks made very great strides during the first few years of their existence, but it was generally suspected in well informed circles that the business of many of the Banks was of a very speculative and unsafe character and it was a matter of no great surprise to many people when it became known that some of the Banks were in difficulties.

The first important failure to take place was that of the People's Bank of India and the loss of confidence caused by the failure of that Bank resulted in a very large number of the failures the principal being that of the Indian Specie Bank.

Since those events of ten years ago confidence has been largely restored. But in April 1923 the Alliance Bank of Singapore suspended payment and is now in voluntary liquidation. The effect of the failure of this old established Bank might have been disastrous but for the prompt action of the Imperial Bank which dealt with the situation in close association with the Government of India. The Imperial Bank undertook to pay the deposits of the Alliance Bank 50 per cent of the amount due to them. A panic was averted and a critical period was passed through with little difficulty.

During 1923 the Tata Industrial Bank which was established in 1913 was merged in the Central Bank of India.

The following shows the position of the better known existing Banks as it appears in the latest available Balance Sheets —

INDIAN PRIVATE BANKERS AND SHROFFS

Indian private Bankers and Shroffs flourished in India long before Joint Stock Banks were ever thought of, and it seems likely that they will continue to thrive for some very considerable time to come. The use of the word Shroff is usually associated with a person who charges enormous rates of interest to impecunious people, but this is hardly fair to the people known as shroffs in banking circles, as there is no doubt that the latter are of very real service to the business community and of very great assistance to Banks in India. Under present conditions the Banks in India can never hope to be able to get into sufficiently close touch with the affairs of the vast trading community in India to enable them to grant accommodation to more than a few of these traders direct and it is in his capacity as middleman that the shroff proves of such great service. In this capacity also he brings a very considerable volume of business within the scope of the Presidency Banks Act and enables the Presidency Banks to give accommodation which, without his assistance, the Banks would not be permitted to give. The shroff's position as an intermediary between the trading community and the Banks usually arises in something after the following manner. A shopkeeper in the bazaar, with limited means of his own, finds that, after using all his own money, he still requires say Rs 25,000 to stock his shop suitably. He thereupon approaches the shroff, and the latter after very careful inquiries as to the shopkeeper's position grants the accommodation, if he is satisfied that the business is safe. The business, as a rule, is arranged through a hoondee broker, and in the case referred to the latter may probably approach about ten shroffs and secure accommodation from them to the extent of Rs. 2,500 each. A hoondee is usually drawn at a currency of about 2 months and is almost invariably taken by the shroffs in respect of such advances.

A stage is reached however when the demands on the shroffs are greater than they are able to meet out of their own money, and it is at this

point that the assistance of the Banks is called into requisition. The shroffs do this by taking a number of the bills they already hold to the Banks for discount under their endorsement, and the Banks accept such bills freely to an extent determined in each case by the standing of the shroff and the strength of the drawer. The extent to which any one shroff may grant accommodation in the bazaar is therefore dependent on two factors viz (1) the limit which he himself may think it advisable to place on his transactions and (2) the extent to which the Banks are prepared to discount bills bearing his endorsement. The shroffs keep in very close touch with all the traders to whom they grant accommodation and past experience has shown that the class of business above referred to is one of the safest the Banks can engage in.

The rates charged by the shroffs are usually based on the rates at which they in turn can discount the bills with the Banks and necessarily vary according to the standing of the borrower and with the season of the year. Generally speaking however a charge of two annas per cent per mensem above the Banks rate of discount or 1½% is a fair average rate charged in Bombay to a first class borrower. Rates in Calcutta and Madras are on a slightly higher scale due in a great measure to the fact that the competition among the shroffs for business is not so keen in these places as it is in Bombay.

The shroffs who engage in the class of business above described are principally Marwaris and Multanis having their Head Offices at the most part in Bikanir and Shikarpur, respectively, the business elsewhere than at the Head Offices being carried on by Moonis who have very wide powers.

It is not known to what extent native bankers and shroffs receive deposits and engage in exchange business throughout India but there is no doubt that this is done to a very considerable extent.

THE BANK RATE.

Formerly each Presidency Bank fixed its own Bank Rate and the rates were not uniform. Now the Imperial Bank fixes the rate for the whole of India. The rate fixed represents the rate charged by the Banks on demand loans against Government securities only and advances on other securities or discounts are granted as

a rule at a slightly higher rate. Ordinarily such advances or discounts are granted at from one-half to one per cent over the official rate but this does not always apply and in the monsoon months when the Bank rate is sometimes nominal it often happens that an accommodation is granted at the official rate or even less.

The following statement shows the average constituted—

Year	1st Half year	2nd Half year	Daily average.
1921	6.038	5.106	5.572
1922	7.182	4.510	5.821
1923	7.419	4.5	5.959

1926	5.651		
1927	6.508	4	4.826

BANKERS' CLEARING HOUSES

The principal Clearing Houses in India are those of Calcutta, Bombay, Madras, Rangoon, Colombo and Karachi and of these the first two are by far the most important. The members at these places consist of the Imperial Bank, most of the Exchange Banks and English Banking Agency firms, and a few of the better known of the local Joint Stock Banks. No Bank is entitled to claim to be a member as of right and any application for admission to a Clearing must be proposed and seconded by two members and be subject thereafter to ballot by the existing members.

The duties of settling Bank are undertaken by the Imperial Bank at each of the places mentioned and a representative of each member attends at the office of that Bank on each business day at the time fixed to deliver all cheques he may have negotiated on other members

and to receive in exchange all cheques drawn on him negotiated by the latter. After all the cheques have been received and delivered the representative of each Bank advises the settling Bank of the difference between his total receipts and deliveries and the settling Bank thereafter strikes a final balance to satisfy itself that the totals of the debtor balances agree with the total of the creditor balances. The debtor Banks thereafter arrange to pay the amounts due by them to the settling Bank during the course of the day and the latter in turn arranges to pay on receipt of those amounts the balances due to the creditor Banks. In practice however all the members keep Bank accounts with the settling Bank so that the final balances are settled by cheques and book entries thus doing away with the necessity for cash in any form.

The figures for the Clearing Houses in India above referred to are given below —

The Railways.

The history of Indian Railways very closely reflects the financial vicissitudes of the country. Not for some time after the establishment of Railways in England was their construction in India contemplated, and then to test their applicability to Eastern conditions three experimental lines were sanctioned in 1845. These were from Calcutta to Raniganj (129 miles) the East Indian Railway Bombay to Kalyan (83 miles) Great Indian Peninsula Railway and Madras to Arkonam (89 miles) Madras Railway Indian Railway building on a serious scale dates from Lord Dalhousie's great minute of 1853, wherein after dwelling upon the great social political and commercial advantages of connecting the chief cities by rail, he suggested a great scheme of trunk lines linking the Presidencies with each other and the inland regions with the principal ports. This reasoning commended itself to the Directors of the East India Company and it was powerfully reinforced when during the Mutiny, the barriers imposed on free communication were severely felt. As there was no private capital in India available for railway construction English Companies the interest on whose capital was guaranteed by the State, were formed for the purpose. By the end of 1859 contracts had been entered into with eight companies for the construction of 5,000 miles of line, involving a guaranteed capital of £52 millions. These companies were (1) the East Indian (2) the Great Indian Peninsula (3) the Madras (4) the Bombay Baroda and Central India (5) the Eastern Bengal, (6) the Indian Branch, now the Oudh and Rohilkhand State Railway (7) the Sind Punjab and Delhi, now merged in the North Western State Railway, (8) the Great Southern of India, now the South Indian Railway. The scheme laid the foundations of the Indian Railway system as it exists to-day.

Early Disappointments

The main principle in the formation of these companies was a Government guarantee on their capital, for this was the only condition on which investors would come forward. This guarantee was five per cent coupled with the free grant of all the land required. In return the companies were required to share the surplus profits with the Government, after the guaranteed interest had been met, the interest charges were calculated at 2½ to the rupee. The Railways were to be sold to Government on fixed terms at the close of twenty-five years and the Government were to exercise close control over expenditure and working. The early results were disappointing. Whilst the Railways greatly increased the efficiency of the administration, the mobility of the troops, the trade of the country and the movement of the population, they failed to make profits sufficient to meet the guaranteed interest. Some critics attributed this to the unnecessarily high standard of construction adopted and to the engineers' ignorance of local conditions. The result was that by 1869 the deficit on the Railway Budget was Rs. 1,66,14,000. Seeking for some more economical method of construction, the Government

secured sanction to the building of lines by direct State Agency, and funds were allotted for the purpose, the metre-gauge being adopted for cheapness. Funds soon lapsed and the money available had to be diverted to converting the Sind and Punjab lines from metre to broad-gauge for strategic reasons. Government had therefore again to resort to the system of guarantee, and the Indian Midland (1882-85) since absorbed by the Great Indian Peninsula the Bengal Nagpur (1882-87) the Southern Maratha (1892) and the Assam Bengal (1891) were constructed under guarantees but on easier terms than the first companies. Their total length was over 4,000 miles.

Famine and Frontiers.

In 1870, embarrassed by famine and by the fall of the exchange value of the rupee, Government again endeavoured to enlist unaided private enterprise. Four companies were promoted—the Nilgiri, the Delhi-Umballa, Kalka, the Bengal Central, and the Bengal North-Western. The first became bankrupt, the second and third received guarantees, and the Tirhut Railway had to be leased to the fourth. A step of even greater importance was taken when Native States were invited to undertake construction in their own territories, and the Nizam's Government guaranteed the interest on 330 miles of line in the State of Hyderabad. This was the first of the large system of Native State Railways. In the first period up to 1870 4,255 miles were opened of which all save 45 were on the broad gauge. During the next ten years there were opened 4,238, making the total 8,493 (on the broad gauge 6,562, the metre 1,865, and narrow 67). Then came a period of financial ease. It was broken by the fall in exchange and the costly lines built on the frontier. The Panjdeh incident, which brought Great Britain and Russia to the verge of war necessitated the connection of our outposts at Quetta and Chaman with the main trunk lines. The sections through the desolate Harnai and Bolan Passes were enormously costly. It is said that they might have been ballasted with rupees. The long tunnel under the Khojak Pass added largely to this necessity, but unprofitable, outlay.

Rebate Terms Established.

This induced the fourth period—the system of rebates. Instead of a gold subsidy companies were offered a rebate on the gross earnings of the traffic interchanged with the main line so that the dividend might rise to four per cent but the rebate was limited to 20 per cent. of the gross earnings. Under these conditions there were promoted the Ahmedabad (1874), the South Behar and the Southern Punjab although only in the case of the first were the terms strictly adhered to. The Barak Light Railway, on the two feet six inches gauge, entered the field without any guarantee and with rolling stock designed to illustrate the carrying power of this gauge. The rebate terms being found unattractive in view of the competition of 4 per cent. trustee stocks they were revised in 1896 to provide for an

absolute guarantee of 8 per cent with a share of surplus profits or rebate up to the full extent of the main line net earnings in supplement of their own net earnings, the total being limited to 8½ per cent. on the capital outlay. Under these terms, a considerable number of feeder line companies was promoted though in none were the conditions arbitrarily exacted. As these terms did not at first attain their purpose they were further revised, and in lieu was substituted an increase in the rate of guarantee from 8 to 8½ per cent and of rebate from ½ to 5 per cent with equal division of surplus profits over 5 per cent in both cases. At last the requirements of the market were met and there was for a time a mild boom in feeder railway construction and the stock of all the sound companies promoted stood at a substantial premium. Conditions changed after the war and the Aeworth Committee so far from approving of this system, considered that the aim of the Government should be to reduce by amalgamation the number of existing companies and that it should only be in cases where the State cannot or will not provide adequate funds that private enterprise in this direction should be encouraged.

The existing Branch Line Companies have ceased for some time to raise additional capital for capital requirements. They have either obtained overdrafts from various Banks for this purpose at heavy rates of interest or issued debentures at special rates of interest (usually about 7 per cent) or in several cases asked for money to be advanced to them by the Railway Board. So far therefore from reducing the amount that the Government of India have to raise in the open market, they were increasing the amount. For the above reasons, the Government of India have abolished this system and are now prepared themselves to find the capital required for the construction of extension or branches to existing main line systems. They have also announced their readiness to consider the question of constructing branch or feeder lines which were not expected to be remunerative from the point of view of railway earnings upon a guarantee against loss from a Local Government or local authority which might desire to have such lines constructed for purely local reasons or on account of administrative advantages likely to accrue in particular areas. This proposal was put forward as affording a suitable method of reconciling the interests of the Central and the Local Governments and of providing for local bodies and for Local Governments a method of securing the construction of railways which may be required for purely local reasons and which while not likely to prove remunerative on purely railway earnings are likely to give each benefits to Local Governments and local bodies as will more than repay the amounts paid under the guarantee. Some such arrangements have already been made with Local Government in Madras Punjab Burma and Bombay.

Railway Profits Commence

Meantime a much more important change was in progress. The gradual economic development of the country vastly increased the traffic, both passenger and goods. The falling in of the original contracts allowed Gov-

ernment to renew them on more favourable terms. The development of irrigation in the Punjab and Sind transformed the North-Western State Railway. Owing to the burden of maintaining the unprofitable Frontier Lines, this was the Cinderella Railway in India—the scapegoat of the critics who protested against the unwisdom of constructing railways from borrowed capital. But with the completion of the Chenab and Jhelum Canals the North-Western became one of the great grain lines of the world choked with traffic at certain seasons of the year and making a large profit for the State. In 1900 the railways for the first time showed a small gain to the State. In succeeding years the net receipts grew rapidly. In the four years ended 1907-08 they averaged close upon £2 millions a year. In the following year there was a relapse. Bad harvests in India, accompanied by the monetary panic caused by the American financial crisis led to a great falling off in receipts just when working expenses were rising owing to the general increase in prices. Instead of a profit there was a deficit of £1,240,000 in the railway accounts for 1908-09. But in the following year there was a reversion to a profit, and the net Railway gain has steadily increased. For the year ended March 1919 this gain amounted to £10,573,000. Although in a country like India, where the finances are mainly dependent upon the character of the monsoon, the railway revenue must fluctuate there was no reason to anticipate a further deficit but the net railway gain decreased to £8,767,000 in 1920-21 and there was an actual loss of £8,182,000 in 1921-22. As a result of the steps taken by the Railway Board, however, on the report of the Aeworth Committee in 1921 this loss was changed into a gain of £218,000 in 1922-23 and this was further increased to a gain of £4,275,000 in 1923-24 of £8,679,800 in 1924-25 and of £5,796,000 in 1925-26. Thanks to the separation of the Railway from the General Finances which is described later, and provided that the present railway policy is not influenced too much by political considerations railways should continue to show a net yearly gain.

Contracts Revised.

One factor which helped to improve the financial position was the revision of the original contracts under which the guaranteed lines were constructed. The five per cent dividend guaranteed at 22½ per rupee, and the half yearly settlements made these companies a drain on the State at a time when their stock was at a high premium. The first contract to fall in was the East Indian, the great line connecting Calcutta with Delhi and the Northern provinces. When the contract lapsed, the Government exercised their right of purchasing the line, paying the purchase-money in the form of terminable annuities derived from revenues, carrying with them a sinking fund for the redemption of capital. The railway thus became a State line, but it was released to the Company which actually works it. Under these new conditions the East Indian Company brought to the State in the ten years ended 1909 after meeting all charges, including the payments on account of the terminable annuity by means of which the

purchase of the line was made and interest of all capital outlay subsequent to the date on purchase, a clear profit of nearly ten million. At the end of seventy four years from 1880 when the annuity expires, the Government will come into receipt of a clear yearly income of upwards of £2,700,000, equivalent to the creation of capital of sixty to seventy millions sterling. No other railway shows results quite equal to the East Indian, because, in addition to serving a rich country by an easy line it possesses its own collieries and employs cheap coal. But with allowance for these factors all the other guaranteed companies which have been acquired under similar conditions as their contracts expired, have proportionately swelled the revenue and assets of the State. It is difficult to estimate the amount which must be added to the capital debt of the Indian railways in order to counterbalance the loss during the period when the revenue did not meet the interest charges. According to one estimate it should be £60 millions. But even if that figure be taken Government have a magnificent asset in their railway property.

Improving Open Lines.

These changes induced a corresponding change in Indian Railway policy. Up to 1900 the great work had been the provision of trunk lines. But with the completion of the Nagda Mattia line providing an alternative broad-gauge route from Bombay to Delhi through Eastern Rajputana the trunk system was virtually complete. A direct broad gauge route from Bombay to Sind is needed, but chiefly for strategic purposes. The poor commercial prospects of the line and the opposition of the Rao of Cutch to any through line in his territories keep this scheme in the background. There does not exist any through rail connection between India and Burma although several routes have been surveyed. The mountainous character of the region to be traversed, and the easy means of communication with Burma by sea, rob this scheme of any living importance. Further survey work was undertaken between 1914 and 1920 the three routes to be surveyed being the coast route the Manipur route and the Hukong valley route. The metre-gauge systems of Northern and Southern India must also be connected and Karachi given direct broad-gauge connection with Delhi, a project that is now under investigation. But these works are subordinate to the necessity for bringing the open lines up to their traffic requirements and providing them with feeders. The sudden increase in the trade of India found the main lines totally unprepared. Costly works were necessary to double lines, improve the equipment, provide new and better yards and terminal facilities and to increase the rolling stock. Consequently the demands on the open lines altogether overshadowed the provision of new lines. Even then the railway budget was found totally inadequate for the purpose, and a small Committee sat in London, under the chairmanship of Lord Inchcape, to consider ways and means. This Committee found that the amount which could be re-accumulatively spent on railway construction in India was limited only by the

capacity of the money market. They fixed the annual allotment at £12,000,000 a year. Even this reduced sum could not always be provided.

Government Control and re-organisation, of Railway Board.

As the original contracts carried a definite Government guarantee of interest, it was necessary for Government to exercise strong supervision and control over the expenditure during construction and over management and expenditure after the lines were open for traffic. For these purposes a staff of Consulting Engineers was formed, and a whole system of checks and counterchecks established, leading up to the Railway Branch of the Public Works Department of the Government of India. As traffic developed the Indian Railways outgrew this dry nursing and when the original contracts expired and the interests of Government and the Companies synchronised it became not only vexatious but unnecessary. Accordingly in 1901-02 Mr Thomas Robertson was deputed by the Secretary of State to examine the whole question of the organization and working of the Indian Railways, and he recommended that the existing system should be replaced by a Railway Board consisting of a Chairman and two members with a Secretary. The Board was formally constituted in March 1906. The Board was made subordinate to the Government of India in which it was represented by the Department of Commerce and Industry. It prepared the railway programme of expenditure and considered the greater questions of policy and economy affecting all the lines. Its administrative duties included the construction of new lines by State agency, the carrying out of new works on open lines, the improvement of railway management with regard both to economy and public convenience, the arrangements for through traffic, the settlement of disputes between lines, the control and promotion of the staff on State lines and the general supervision over the working and expenditure of the Companies' lines. Two minor changes have taken place since the constitution of the Railway Board. In 1908 to meet the complaint that the Board was subjected to excessive control by the Department of Commerce and Industry, the powers of the Chairman were increased and he was given the status of a Secretary to Government with the right of independent access to the Viceroy, he usually sits in the Imperial Legislative Council as the representative of the Railway interest. In 1912 in consequence of complaints of the excessive interference of the Board with the Companies an informal mission was undertaken by Lord Inchcape to reconcile differences. Various changes were introduced during the years 1918-1920 such as the modification of the rule that the President and members of the Railway Board should all be men of large experience in the working of railways due to the importance of financial and commercial considerations in connection with the control of Indian Railway policy. This decision was, however, revised in 1920 and an additional appointment of Financial Adviser to the Railway Board created instead. The question of the most suitable organisation was further fully examined by the Acworth Committee in 1921.

and a revised organization which is described later was introduced from 1st April 1924.

Some of the difficulties involved in the constitution of a controlling authority for the railways of India may be realised from a study of the "Notes on the Relation of the Government to Railways in India" printed as an appendix to the Railway Administration report for 1922-23. These notes bring out the great diversity of conditions prevailing which involve the Railway Department in the exercise of the functions of—

(a) the directly controlling authority of the three State-worked systems aggregating 15,414 miles in 1925

(b) the representative of the predominant owning partner in systems aggregating 27,326 miles

(c) the guarantor of many of the smaller companies and

(d) the statutory authority over all railways in India.

Moreover in all questions relating to railways or extra municipal tramways in which Provincial Governments are concerned the Railway Department is called upon to watch the interests of the Central Government and is frequently asked to advise the Local Governments. Its duties do not end there. The future development of railways depends largely on the Government of India and the Railway Department is therefore called upon to plan out schemes of development to investigate and survey new lines and to arrange for financing their construction. The statement of the varied responsibilities of the Government of India in regard to railways might be extended almost indefinitely. It will perhaps be sufficient to mention only the complications that may and do arise owing to the very considerable railway mileage in Indian States. In the exercise of all these functions the Railway Department is a Department of the Government of India its policy must be in accord with the policy of the Government as a whole and every decision must be made with that consideration in mind. The evolution of a satisfactory authority for the administration of these varied functions has proved extremely difficult and the question was one of those referred to the Railway Committee (1920-21) presided over by Sir William Acworth who expressed the unanimous opinion that material changes were necessary in the constitution of the Railway Board. Amongst their recommendations they advised the early appointment of a Chief Commissioner of Railways whose first duty should be to prepare a definite scheme for the reorganization of the Railway Department and Mr. C. D. M. Hindley formerly Agent of the East Indian Railway and Chairman of the Calcutta Port Trust, was appointed Chief Commissioner on November 1st, 1922.

The principal constitutional change involved in this appointment is that the Chief Commissioner who takes the place of the President of the Railway Board is solely responsible—under the Government of India—for arriving at decisions on technical matters and for advising the Government of India on matters of railway policy and is not, as was the President subject to be out-voted and over-ruled by his colleagues on

the Board. The detailed re-organization of the Railway Board in accordance with the Chief Commissioner's proposals required careful consideration but one of the most important of his recommendations namely the appointment of a Financial Commissioner was considered of particular urgency and the Secretary of State's sanction was therefore obtained to the appointment with effect from 1-4-1923. While in the person of the Chief Engineer the Railway Board has always had available the technical advice of a senior Civil Engineer in Mechanical Engineering questions it has had to depend on outside assistance. The disadvantages of this arrangement have become increasingly evident and it was therefore decided with effect from November 1st, 1922, to create the new appointment of Chief Mechanical Engineer with the Railway Board.

The reorganization carried out in 1924 had for one of its principal objects the relief of the Chief Commissioner and the Members from all but important work so as to enable them to devote their attention to larger questions of railway policy and to enable them to keep in touch with Local Governments railway administrations and public bodies by touring to a greater extent than they had been able to do in the past. This object was effected by placing a responsible Director at the head of each of the main branches of the Board's work namely Civil Engineering, Mechanical Engineering, Traffic and Establishment. The former Chief Engineer and the Chief Mechanical Engineer who had been employed mainly in cultivative work, became Directors and together with the Directors of Traffic and Establishment have been made responsible for the direct disposal of the work of their branches under the general orders of the Railway Board.

The posts of Joint Secretary and 4 Assistant Secretaries were replaced by 6 Deputy Directors working under the Directors and in charge of branches dealing with Establishment, Works, Projects, Stores, Statistics and Traffic. One Assistant Director was also added to supervise the Technical Branch and the Drawing Office. The disposal of the general work of the Railway Board was provided for by the continuance of the post of Secretary in whose name all letters and orders of the Board are issued. The position of the Board as a Department of the Government of India has been maintained and it works under the Member for Commerce and Railway. As already stated the Chief Commissioner is the Secretary to the Government of India in the Railway Department and orders issued by the Board over the signature of the Secretary are orders of the Government of India.

Experience of the working of this organization during 1924-25 and the decision agreed to by the Legislative Assembly in September 1924 to separate railway finances from the general finances of the country made it necessary to appoint a Deputy Director and an Assistant Director of Finance. An Assistant Director of Statistics was also added during that year. Later a Director of Finance was added to the establishment occupying as regards disposal of work, the same position as the Directors referred to above.

Further experience of the reduction of work resulting from the large delegation of powers and responsibility to the Agents of State managed Railways and the Board of Directors of Company managed railways enabled a rearrangement of work to be made during 1925-26 accompanied by a reduction in the staff. Under this rearrangement the posts of 3 Deputy Directors an Assistant Director and the Assistant Secretary were held in abeyance. The personal work was transferred from the Directors of Establishment to the Secretary and a temporary post of Deputy Secretary was created. Further a separate technical office was established to take charge of the technical work of the engineering branches. The Technical Officer also acts as *ex-officio* Secretary to the permanent Standardization Committees which have been appointed to deal progressively with all questions of standards of equipment.

The present superior staff under the Railway Board, therefore consists of 3 Directors 4 Deputy Directors a Technical Officer 2 Assistant Directors a Secretary and a Deputy Secretary.

The question of transferring the supervision of railway accounts of State Railways from the Finance Department to the Railway Board has been under consideration for some time and in accordance with a resolution adopted by the Legislative Assembly in September 1925 a start has been made with the transfer of the supervision of railway accounts on the East Indian Railway. At the same time a separate Audit Staff has been appointed reporting directly to the Auditor General. If the revised procedure proves a success, it will probably be extended to other State Railways.

Management.

The Railways managed by Companies have Boards of Directors in London and are represented in India by an Agent. The Company managed railways are generally organised on a departmental basis with a Traffic Manager, Chief Engineer Locomotive and Carriage and Wagon Superintendent, Controller of Stores and Chief Auditor while the State managed lines have generally adopted the divisional organisation with a Chief Operating Superintendent, Chief Commercial Manager, Chief Engineer, Chief Mechanical Engineer, Controller of Stores and Chief Auditor.

Clearing Accounts Office.

On the results of an experiment carried out in 1925 on the North Western Railway with the object of demonstrating that grouped divisions of traffic could be effected on the basis of ton mileage carried on each railway under particular commodities of Particular rates Railway Board decided that a thorough investigation should be made of the possibilities of establishing a Central Office for the apportionment of through traffic between railways on grouped divisions of such traffic. And for this purpose an officer was placed on special duty early in December 1925 who in the course of his investigations discovered a new method of much greater simplicity for apportioning the traffic.

The working of the new method has been fully examined and Government are convinced

that the establishment of a Central Office for the check and apportionment of traffic under the revised method will make for increased efficiency and economy.

The Clearing Accounts Office will undertake the internal check of the returns from stations of State-worked Railways in respect of all through traffic of such railway. It will in addition undertake the apportionment of all traffic interchanged between State worked Railways. The apportionment will be done under the revised method. It will also be responsible for the apportionment of all traffic interchanged with the Company worked Railways which under the existing procedure the State worked Railways are responsible to bear. All such work will for the present be performed under existing methods in order that the Company worked Railways may receive the same returns as they do at present. From enquiries that have been made it is hoped however that some at least of the Companies will desire to receive returns in the modified forms with the traffic apportioned under the new method.

The question of extending the functions of the Clearing Accounts Office to include the preparation of certain classes of statistics and the adjustments of certain classes of expenditure is also under consideration.

The present cost of the work transferred to the Clearing Accounts Office compared with the cost of performing the same work in the latter office shows that a substantial saving in expenditure will be secured immediately. As Company worked Railways agree to accept the application of the new method of apportionment of traffic the saving will increase.

The Railway Conference

In order to facilitate the adjustment of domestic questions, the Railway Conference was instituted in 1878. This Conference was consolidated into a permanent body in 1903 under the title of the Indian Railway Conference Association. It is under the direct control of the railways. It elects a President from amongst the members and it has done much useful work.

The Indian Gauges.

The standard gauge for India is five feet six inches. When construction was started the broad-gauge school was strong, and it was thought advisable to have a broad gauge in order to resist the influence of cyclones. But in 1870 when the State system was adopted it was decided to find a more economical gauge for the open lines had cost £17,000 a mile. After much deliberation the metre gauge of 3 feet 3½ inches was adopted, because at that time the idea of adopting the metric system for India was in the air. The original intention was to make the metre-gauge lines provisional; they were to be converted into broad-gauge as soon as the traffic justified it. Consequently they were built very light. But the traffic expanded with surprising rapidity and it was found cheaper to improve the carrying power of the metre-gauge lines than to convert them to the broad-gauge. So, except in the Indus Valley where the strategic situation demanded

an unbroken gauge the metre gauge lines were improved and they became a permanent feature in the railway system. Now there is a great metre-gauge system north of the Ganges connected with the Rajputana lines and Kathiawar. Another system in Southern India embracing the Southern Maratha and the South India Systems. These are not yet connected

but the necessary link from Khandwa by way of the Nizam's Hyderabad-Godavari Railway cannot be long delayed. All the Burma lines are on the metre-gauge. Since the opening of the Barak line, illustrating the capacity of the two feet six inch gauge, there has been developed a tendency to construct feeders on this rather than on the metre-gauge.

The following statement brings out the more important features of the operation of Indian railways during the year 1926-27 together with similar information for the year 1925-26 —

Mileage open on the 31st March—		1925-26	1926-27
1	Single line	35,188 73	3,542 41
2	Double line or more	3,302 75	3 506 47
3	Total route mileage	38,579 48	39 048 88
4	Total track mileage	52 079 13	52 886 27
Capital and Revenue Earnings and Expenditure—			
5	Total capital at charge including ferries and suspense on open line	Rs 7 54 31 52,000	7 82,86 66 000
6	Gross earnings	1 13 39,21,000	1 12 85,96 000
7	Gross earnings per train mile	6 03	6 06
8	Working expenses	71 09 05 000	69,70 08 000
9	Working expenses per train mile	4 38	4 08
10	Net earnings	42,30 16 000	42 65 68 000
11	Percentage of working expenses to gross earnings	62 69	52 04
12	Percentage of net earnings on total capital outlay	5 61	5 41
Equipment—			
13	Locomotives	10 011	9,873
14	Passenger carriages	20 449	20 690
15	Other passenger vehicles	5 556	5 879
16	Goods stock	226 766	4,30 726
Passenger Traffic—			
17	Number of passengers carried	599 144,800	6 04 371 300
18	Passenger miles	20 331 762 000	20 866 250,000
19	Average journey	Miles 33 9	33 7
20	Earnings from passengers carried	Rs 39 45 09 000	39 11,89,000
21	Average rate charged per passenger per mile	Pies 3 73	3 59
22	Total coaching earnings	Rs 45,81 56 000	44 48 35 000
Goods Traffic—			
23	Number of tons carried	79 859 000	85 833 000
24	Net ton miles	19,900,018 000	20 374 679 000
25	Average haul	249 2	289 4
26	Earnings from tonnage carried	Rs 64 42,17 000	60 00 65 000
27	Average rate charged for carrying a ton of goods one mile	Pies 6 12	6 12
28	Total goods earnings	Rs 64,83 30,000	65 35,63 000
Number of employees		751,603	762,553

At the close of the year 1926-27 the total capital invested in railways was Rupees 7,82,86,66,000 represented by a property which in terms of route mileage amounted to 39,048 miles of railway. This property brought in to the owners a return of 5.41 per cent on the capital at charge. Similar figures for the railways owned by the State are —

	Rs
Total capital at charge	4,90,51,71 000
Total route mileage	28,004
Return on capital outlay	5 20

In 1925-26 there was a falling off of Rs 9,88,84,000 in the net gain from the working of State-owned Railways due principally to a decline in earnings of Rs 1,34,56,000 an increase of Rs 1,51,13,000 in working expenses and to enhanced interest charges of Rs 90,97,000.

State versus Company Management.—The relative advantages and disadvantages of State and Company management of the railways owned by Government which comprises the great bulk of the railway mileage in India have

been the subject of discussion in official circles and the public press for many years. In India the question is complicated by the fact that the more important companies have not in recent years been the owners of the railways which they manage and the headquarters of their Boards are in London. The subject was one perhaps the most important, of the terms of reference of the Acworth Railway Committee. That Committee was unfortunately, unable to make a unanimous recommendation on this point, their members being equally divided in favour of State management and Company management. They were however unanimous in recommending that the present system of management by Boards of Directors in London should not be extended beyond the terms of the existing contracts and this recommendation has met with general public acceptance. During the year 1922-23 the question was again referred to certain Local Governments and public bodies and opinions collected and discussed. The approaching termination of the East Indian Railway contract on 31st December 1924 and of that of the Great Indian Peninsula Railway on 30th June 1925 rendered an early decision on this question imperative. When the question was debated in the Legislative Assembly in February 1923 the non-official Indian Members were almost unanimously in favour of State management and indeed were able to carry a resolution recommending the placing of the East Indian Railway and the Great Indian Peninsula Railway under State management at the close of their present contracts. The Government of India, however, expressed themselves as being so convinced by the almost universal failure of this method in other countries that they proposed while accepting the necessity for taking over the management of the East Indian Railway and the Great Indian Peninsula Railway to continue their efforts to devise a satisfactory form of Company domiciled in India to take these railways over eventually on a basis of real Company management. On 1st January 1926 the East Indian Railway was amalgamated with the Oudh and Rohilkhand Railway and brought under direct State Management while on 1st July 1925 the Great Indian Peninsula Railway followed suit. The Vatu Jubbulpore section of the East Indian Railway was transferred to the Great Indian Peninsula Railway on 1st October 1925.

Separation of the Railway from the General Finances.—The question of the separation of the railway from the general finances has been under consideration for some time and as a result of the recommendations of the Acworth Committee in 1921 the question was further examined by the Railway Finance Committee and the Legislative Assembly but it was decided to postpone a definite decision for the present.

The question was examined afresh in connection with the recommendation of the Betts Committee in 1923 that the railways in India should be so worked as to yield an average return of at least 5½ per cent. on the capital at charge and it was decided that a suitable time had arrived when this separation could be carried out. A resolution was accordingly introduced in the Assembly on the 2nd March 1924 recommending to the Governor-General in Council—

"that in order to relieve the general budget from the violent fluctuations caused by the incorporation therein of the railway estimates and to enable the railway to carry out a continuous railway policy based on the necessity of making a definite return over a period of years to the State on the Capital expended on railways—

(1) The railway finances shall be separated from the general finances of the country and the general revenues shall receive a definite annual contribution from railways which shall be the first charge on railway earnings.

(2) The contribution shall be a sum equal to five-sixths of 1 per cent on the capital at charge of the railways (excluding capital contributed by Companies and Indian States and Capital expenditure on strategic Railways) at the end of the penultimate financial year plus one-fifth of any surplus profits remaining after payment of this fixed return subject to the condition that if any year railway revenues are insufficient to provide the percentage of five-sixths of 1 per cent. on the capital at charge, surplus profits in the next or subsequent years, will not be deemed to have accrued for purposes of division until such deficiency has been made good. From the contribution so fixed will be deducted the loss in working and the interest on capital expenditure on strategic lines.

(3) Any surplus profits that exist after payment of these charges shall be available for the Railway administration to be utilised in

(a) forming reserves for

(i) equalising dividends that is to say 'or securing the payment of the percentage contribution to the general revenues in lean years

(ii) depreciation

(iii) writing down and writing off capital

(b) the improvement of services rendered to the public,

(c) the reduction of rates.

(4) The railway administration shall be entitled subject to such conditions as may be prescribed by the Government of India to borrow temporarily from capital or from the reserves for the purpose of meeting expenditure for which there is no provision or insufficient provision in the revenue budget subject to the obligation to make repayment of borrowings out of the revenue budgets of subsequent years

(5) In accordance with present practice the figures of gross receipts and expenditure of railways will be included in the Budget Statement. The proposed expenditure will as at present be placed before the Legislative Assembly in the form of a demand for grants and on a separate day or days among the days allotted for the discussion of the demands for grants the Member in charge of the Railways will make a general statement on railway accounts and working. Any reductions in the demand for grants for railways resulting from the vote of the Legislative Assembly will not ensure to general revenues, i.e. will not have the effect of increasing the fixed contribution for the year

(6) The Railway Department will place the estimate of railway expenditure before the Central Advisory Council on some date prior to the date for the discussion of the demand for grants for railways."

When introducing this resolution the Hon ble Member for Commerce stated that it had been represented to him that there was a general feeling in the House that before the House was asked to commit itself to those proposals it should be allowed to refer them to a committee of the House. He further stated that he had no objection to this course provided that the committee met rapidly. This was agreed to and members were appointed.

The committee met twice and considered the resolution but was not able within the time allowed to satisfy itself fully as to the effect of the proposals in the resolution on the control of the Assembly over railway finance and policy and as to the amount and form of contribution to be paid by the railways to general revenues. In the circumstances the committee recommended that the consideration of the resolution be adjourned till the autumn session to allow the committee further time for examination. Government raised no objection to this proposal and it was agreed to by the Assembly.

The resolution was further examined by the Standing Finance Committee in September and as a result of the views expressed by the committee and in the Assembly certain modifications were introduced. The final resolution agreed to by the Assembly on September 20th 1924 and accepted by Government differed from the original resolution in that the yearly contribution had been placed at 1 per cent. instead of 5/6th per cent on the capital charge and if the surplus remaining after this payment to General Revenue should exceed 3 crores, only 1/3rd of the excess over 3 crores were to be transferred to the Railway Reserve and the remaining 2/3rd was to accrue to General Revenue. At the same time a Standing Finance Committee for Railways was to be constituted to examine the estimate of railways expenditure and the demand for grants, the programme revenue expenditure being shown under a depreciation fund. This committee was to consist of one nominated official member of the Legislative Assembly as Chairman and 11 members elected by the Legislative Assembly from that body. This would be in addition to the Central Advisory Council which will include the Members of the Standing Finance Committee and certain other official and non-official members from the Legislative Assembly and Council of State. These arrangements were to be subject to periodic revision but to be provisionally tried for at least 3 years. They would however only hold good as long as the R. I. Railway and the G. I. P. Railway and existing State Managed Railways remain under State management and if any contract for the transfer of any of the above to Company management was concluded against the advice of the Assembly the Assembly would be at liberty to terminate the arrangements in this resolution.

The Assembly in an addendum recommended that the railway service and the Railway Board should be rapidly Indianised and that the stores for the State Managed Railways should be purchased through the organisation of the Indian Stores Department.

Re-organisation problems.—The growing complexity of railway administration in India and the evolution of new methods of controlling

traffic have given a stimulus to the efforts of various railways to revise their organisations. The general direction in which this re-organisation is being considered is that of consolidation into one department of the operating or transportation work of the railway including the provision of power. This system which is commonly known as the divisional system, was first adopted on the Great Indian Peninsula Railway during 1922-23 and entailed—

(a) the separation of the commercial and operative duties of the Traffic Department

(b) the separation of the mechanical and running duties of the Locomotive Department,

(c) the fusion of the operative duties of the Traffic Department with the running duties of the Locomotive Department

Under the new organisation there is now—

(1) a Chief Transportation Superintendent in charge of all operating functions,

(2) a Chief Traffic Manager in charge of the commercial side of the railway

(3) a Chief Mechanical Engineer in charge of the design and construction of rolling stock and of all repairs and renewals of rolling stock carried out in the central workshops

This organisation is more or less similar to the divisional organisation found on most American Railways with the exception that the Engineering Department still works on a departmental basis. This however is being changed and the maintenance of Way and Works is being brought into the divisional organisation while new construction will still remain outside.

A somewhat similar organisation was introduced on the North Western Railway from 1st October 1924 except that it follows rather the organisation in force on the South African Railways where the railways are divided into a number of areas or divisions each under one chief officer and all reporting to the General Manager who is assisted by a number of principal officers in charge of definite phases of the working. A similar organisation was also introduced on the East Indian and Oudh and Rohilkhand Railways early in 1925.

Revision of Railway statistics.—A Committee consisting of one officer from the Traffic Department and one from the Audit Department of the North Western Railway was appointed in October 1922 to suggest alterations in the existing administrative statistics furnished by railways to the Railway Board and to bring them into line with present up-to-date practice. For many years after the first railways were opened, such statistics as were produced were primarily directed towards showing the return on capital invested, although commodity statistics were also prepared to some extent for trade purposes. It was only when comparisons between different railway systems came to be a matter of interest that statistics of actual working were found to be necessary and even then the tabulation and examination of these figures were directed primarily towards ascertaining the ultimate cost of transportation as a marketable commodity. The introduction of scientific methods of railway working in recent years, however, has shown that properly

prepared statistics form a most valuable portion of the machinery whereby the railway management is able to improve efficiency in the details of working and effect economies in working costs.

The existing statistics are based on the report of a Committee which sat in 1890 to revise the form of the statistics. Considerable changes have been introduced since then and certain individual railway administrations have made considerable progress in the introduction of modern railway statistics but the Acworth Committee which sat in 1921 criticised the figures prepared and used for the purposes of the Railway Board as being out of date and not in conformity with present-day practice.

The main changes recommended by the Committee of 1922 and accepted by the Railway Board are —

(1) The introduction of monthly statistics in addition to the yearly statistics at present furnished to the Railway Board.

(2) The classification of railways under three classes for statistical purposes.

The former change will ensure the supply of up-to-date information of the working of railways to the Railway Board and will enable railways to compare their own working with that of other railway month by month as is done in England and America. The second change will relieve the

smaller railways of the necessity for compiling the detailed statistics which larger railways have to prepare.

Revised Statistics were introduced from 1st October 1923 on all railways and already their value has been proved as not only on railways able to compare their results with those obtained by other railways but the Railway Board is in possession of up-to-date figures of working of all railways. Starting from April 1924, the complete monthly statistics of all class I Railways have been published on the lines of the monthly statements issued by the Ministry of Transport for English Railways and are on sale to the public.

Earnings — Of the total earnings on all Railways of Rs. 11,36 crores Rs. 65.36 crores or 58.3 per cent. was from goods traffic, Rs. 38.13 crores or 34 per cent. from passenger traffic and Rs. 4.47 crores or 4 per cent. from parcels, luggage and miscellaneous earnings.

Passenger Earnings — Passenger earnings which had a rise of 13.5 per cent. from Rs. 80.49 to Rs. 92.1 crores. The following table shows the numbers of and earnings from passengers separately for each class for the 4 years previous to the War and for the 6 latest years. Figures for season and vendors tickets are shown separately for the last 4 years as well as included in the respective classes.

Year	Number of passengers carried (in thousands)				
	1st Class	2nd Class	3rd Class	4th Class	Season & Vendor's tickets
1910	84	2,784	10,700	3,15,439	24,341
1911	70	2,917	11,403	3,71,050	25,687
1912	70	3,030	10,508	3,56,49	26,810
1913-14	71	3,200	11,000	3,80,412	30,114
1914-15	93	6,000	9,086	4,76,489	52,376
1922-23*	307	4,400	7,000	4,77,631	60,660
1923-24*	647	3,906	7,100	4,55,412	58,084
1924-25	611	3,860	7,990	4,80,644	54,092
1925-26	600	3,900	9,130	5,10,227	56,297
1926-27	611	4,167	10,476	5,15,821	56,638
1927-28†	1,199	10,128	11,374	44,602	
1928-29	1,101	9,778	12,401	5,03,266	
1929-30†	1,033	9,901	13,602	5,74,608	
1930-31†	1,012	10,008	14,945	5,78,409	

Year	Earnings from passengers (in thousands of rupees)				
	1st class	2nd class	Inter	3rd class	Season & vendor's tickets
	Rs	Rs	Rs	Rs	Rs
1910	58.82	77.23	94.99	146.18	15.50
1911	66.34	93.43	108.88	153.1	16.85
1912	62.00	80.31	91.37	170.13	17.25
1913-14	68.04	84.70	100.48	187.03	19.36
1914-15	138.47	204.81	145.11	287.19	41.58
1922-23*	130.72	211.77	134.80	322.04	48.58
1923-24*	120.80	199.90	157.88	311.74	47.70
1924-25	121.62	185.51	144.48	317.71	50.07
1925-26	119.24	180.74	140.86	318.28	51.86
1926-27	116.66	181.95	158.20	330.47	50.51
1928-29†	131.17	200.70	141.10	318.80	
1929-30†	122.93	195.00	148.00	343.40	
1930-31†	120.40	189.40	140.00	347.45	
1931-32†	117.70	188.47	141.70	334.97	

* Excludes the Maurbhani and Parlakimedi Light Railways for which detailed information is not available.

† The number of season and vendor's tickets and their earnings included under the respective classes the former at the rate of 50 single journeys per month.

Note.—In previous reports the sum of the number of passengers carried on each separate railway has been shown as the total number of passengers carried on all railways. Passengers travelling over two or more railways have thus been counted as two or more passengers. The actual number of passengers carried on all railways is the same as the total number of passengers originating and this figure has been adopted for number of passengers carried in the present report. As the number of passengers originating is not available prior to 1923-24 the figures of previous years have been adjusted.

Rates Advisory Committee

In their terms of reference the Acworth Committee were directed to report *inter alia* whether the present system of control by Government of rates and fares and the machinery for deciding disputes between Railways and traders are satisfactory and if not to advise what modifications are desirable. The Committee recommended the establishment of a Rates Tribunal to adjudicate upon disputes between Railways and the public in the matter of rates and fares levied by the former. After careful consideration it was decided with the sanction of the Secretary of State to set up a Rates Advisory Committee consisting of a President, one Member representative of Commercial interests and one Member representative of Railway interests. The Committee were accordingly appointed with effect from the 1st April 1929 to investigate and make recommendations to Government on the following subjects:—

- (1) Complaints of undue preference (Section 42 (2) of the Indian Railways Act 1900)
- (2) Complaints that rates are unreasonable in themselves
- (3) Complaints or disputes in respect of terminals (Section 46 of the Railways Act)

(4) The reasonableness or otherwise of any conditions as to the packing of articles specially liable to damage in transit or liable to cause damage to other merchandise.

(5) Complaints in respect of conditions as to packing attached to a rate.

(6) Complaints that Railway Companies do not fulfil their obligations to provide reasonable facilities under section 40 (3) of the Indian Railways Act.

Sir Narbhanha Sarma, lately Law Member of the Executive Council of the Government General, agreed to serve on the Committee as President. Mr. B. D. Manson, Director of Traffic with the Railway Board, was appointed as a Member to represent Railway interests. As regards the Commercial representative it was decided to select one for individual investigations from a panel consisting of members nominated by the various Chambers of Commerce and Trades Associations.

It was first laid down that applications for a reference to the Committee should be addressed to the Agent of the Railways concerned with a deposit of Rs. 100 and that within 5 months of the receipt of such application the Agent of the Railway should prepare a statement of the case and submit it with his observations thereon to the Secretary to the Railway Board. In the

light of the experience gained and upon the recommendation of the Rates Advisory Committee the Government of India reviewed the above procedure and decided that in future applications should be submitted direct to the Government of India, Railway Department, copy being forwarded to the Agent of the Railway concerned that the deposit of Rs. 100 be reduced to Rs. 10 and that the period of 3 months allowed to the Agents of Railways for the submission of the statement of their case in current 1 to 2 months. The revised procedure was introduced with effect from the 15th January 1927.

As regards complaints made for submission to the Committee, cases were slow in coming in but by the end of March 1927, 10 cases had been submitted out of which six have been referred to the Committee on one of which the recommendations have been received for the consideration of the Government of India.

Publicity

In other countries it has been recognised that publicity plays a very great part in attracting business to Railways. In this country however little attention had in the past been paid to it except on the Great Indian Peninsula Railway. The G. I. P. Railway had by means of pamphlets and advertisements in co-operation with the Canadian Pacific Railway attempted to attract American tourists to India and it has met with a record of success. This has not only added to the earnings of the Railway but has also helped the business of the country generally. The propaganda work in official circles was limited towards attracting upper class tourist traffic but it was essential to devise publicity methods to appeal to the large bulk of the people of India from whom the Railway obtained their most paying business. The people were mainly illiterate and the circulation of papers and handbills even in the vernacular or advertisements in the press scarcely touched them. With a view to reaching the general mass of the people the Great Indian Peninsula Railway which had a Publicity Bureau introduced in November 1925 a travelling cinema which displays advertisements in the open air illustrating in attractive pictures and films of fares and facilities.

The Railway Board considered that it was necessary to develop this system in view of the Great Indian Peninsula Railway and to extend it to the other three State-owned Railways. The question was fully discussed with the Agents of State-owned Railways and as a result it was decided to establish Publicity Bureaux in the North Western, East Indian and Eastern Bengal Railways. Sanction was accorded to the creation of a post of Publicity Officer for each of the three Railways as a temporary measure for three years in the first instance with a requisite staff of photographers and messengers and clerks' menials etc.

The necessity for a Central or unifying co-ordinate and direct the methods on the several Railways has also been recommended by the Board and the Board have sanctioned a temporary post of Chief Publicity Officer for a period of three years from 1st March 1927.

The new business that this publicity propaganda is expected to bring to Railways will ultimately be very considerable and the expense

incurred will be small in comparison to the extra earnings. Moreover the Publicity Bureau will be in charge of the work in connection with advertisement by the public on billboards and it is anticipated that income from this source alone will more than cover the expenditure on most of the Railways.

Remodelling of State Railway Workshops

The whole question of the capacity of the workshops of the State Railways and the possibility of their reorganisation and improvement on co-ordinated lines was investigated during the winter of 1924-25 by the State Railway Workshops Committee, an expert Committee presided over by Sir Vincent Raven, formerly Chief Mechanical Engineer North Eastern Railway, England. The results of this investigation have indicated the imperative necessity at any rate for some time to come for heavy expenditure on the remodelling and improvement of State Railway Workshops. In general the recommendations of the Committee as to the lines on which the reorganisation and improvement of the workshops should proceed have been mainly based on the main as depicted by the Railway Board. These recommendations with the Railway Board views thereon have recently been communicated to the Railway Administration concerned and a special officer has also been appointed to see that effect is given to them in a speedy and efficient manner.

The important schemes of workshops construction and remodelling on which work was in progress during the year under review were as follows:—

- (1) Bangalore—Remodelling of Workshops and Machine Shop (S. R. 1)
- (2) Bombay—New Locomotive Shop (S. R. 1)
- (3) Bombay—Remodelling of Shop (S. R. 1)
- (4) Lucknow—Extension to Locomotive Shop (S. R. 1)
- (5) Ferozpur—New workshops (S. R. 1)

Capital Expenditure.—The outlay during the year 1926-27 was Rs. 20.00 crores of which Rs. 12.14 crores represented expenditure incurred on State-owned lines.

Considerable progress has been made with the programme of new construction and although only 4.1 miles of new railway were opened for traffic during 1926-27 at the close of the year there were 2.6 miles under construction.

Trade review.—The earnings of railways are dependent on the general prosperity of the country which in the case of India is most easily measured by the agricultural position and the returns of foreign trade. Judged by the usual criteria the year was not a favourable one for trade generally and this is reflected in the fact that the total earnings of all railways decreased by Rs. 1 crore 62 lakhs from Rs. 113.39 crores to Rs. 112.30 crores.

The earnings from first and second class passengers carried still continue to decrease but inter class passenger traffic again shows an increase. Third class passenger traffic shows an increase of nearly 4 million in numbers but a decline in earnings of Rs. 183 lakhs on account of reductions of fares.

The tonnage of and earnings from the main commodities on Class I Railways during the last two years are shown in the table below. The principal increases were in rice and coal.

Grain, Jaggery, Kerosene oil and salt and the principal decreases were in cotton raw, wool, iron, and other commodities.

Commodity	1925-26		1926-27		Increase + Decrease — in Lakhs (Lakhs)
	No. of tons originating in millions	1st in crore	No. of tons originating in millions	1st in crore	
(1) Fuel for public and private railways	10.11	9.11	15.9	9.65	54
(2) Fuel and other stores on Revenue account	10.4	2.0	16.13	2.49	—
(3) Wheat	1.61	1.1	1.76	2.53	41
(4) Rice in the husk and rice not in the husk	4.06	4.1	4.11	5.85	—66
(5) Grain and Pulse, lower and Jaggery and other grains	2.13	4.19	3.07	4.33	—18
(6) Marble and stone	31	0.91	2.33	0.88	—6
(7) Metallic ores	34	1.07	2.45	1.04	—3
(8) Salt	2	2.3	1.4	1.49	—
(9) Wood unwrought	1.75	1.06	1.5	0.69	—17
(10) Sugar refined and un- refined	0.78	1.8	0.77	1.88	—3
(11) Oil seeds	2.49	0.3	2.5	3.48	—26
(12) Cotton raw and manu- factured	1.76	1.4	1.3	6.40	—62
(13) Jute Raw	0.43	1.3	1.20	1.78	—45
(14) Paddy	0.41	0.9	0.50	0.60	1
(15) Fruit and vegetables fresh	1.0	0.31	1.08	0.91	—
(16) Iron and steel wrought	1.0	2.3	1.0	1.17	—8
(17) Kerosene oil	0.91	1.91	0.9	2.04	13
(18) Gur, Jaggery, Molasses etc.	0.87	1.03	0.78	1.19	—
(19) Tobacco	0.57	0.68	0.26	0.66	—
(20) Iron ore	0.55	2.3	0.55	2.31	—8
(21) Military stores	0.34	0.38	0.38	0.37	—1
(22) Railway material	3.64	0.73	4.00	1.20	—40
(23) Live stock	0.2	0.75	0.2	0.49	—4
(24) Other commodities	10.50	11.99	9.65	11.44	—40
	76.11	6.48	80.07	63.44	7

Open Mileage—The total route mileage on March 31st 1927 was 30,048.88 made up of—

Broad-gauge	19,387.44 miles
Metre-gauge	15,951.41
Narrow-gauge	8,740.68

Under the classification adopted for statistical purposes, this mileage is divided but within the three classes of railways as follows—

Class I	30,048.88 Miles = 90 per cent
Class II	1,773.31 „ = 7 „
Class III	1,141.82 „ = 3 „

Class I includes all the broad gauge mileage 13,761 miles or 57 per cent of the metre gauge and 2,004 or 64 per cent of the narrow gauge.

The State owned 25,004 miles or about 71 per cent and directly managed 1,716 miles or about 40 per cent of the total mileage open at the end of the year.

During the year 1926-27 420.77 miles of new lines were opened for public traffic. Of this mileage 361.52 miles belong to Class I and 59.25 miles to Class II railway.

Additions to Equipment—During 1926-27 a considerable number of old carriages were

replaced during the year by new carriages of larger seating capacity with the result that there was an increase in third class accommodation of 25,850 on the broad gauge and

4,471 in the metre-gauge making a total increase of 32,337. The total number of coaching vehicle representing replacements as well as additions placed on the line on broad and metre gauge railways during the year was 1,474 compared with 1,438 in the previous year. In addition 4,616 coaching vehicles were on order during the year and will be placed on the line in subsequent year. The total net increase in goods wagons was 1,837 on the broad gauge and 1,445 on the metre-gauge.

The following table shows total figures of seating accommodation under the four classes—

Class I Railways	Number of seats in passenger carriages			
	1st	2nd.	Inter	Third
1926-27	2,908	41,639	55,710	527,824
1927-28	10,207	13,785	9,377	839,042

The additions to the goods stock of Class I railways were 865 covered and 972 open broad gauge and 971 covered and 474 open metre-gauge wagons

The Opening of the Khyber Railway—The opening of the Khyber Railway on November 2 1920 marks an interesting stage in the development of India's great railway system. Previously the railway stopped short at Jamrud a few miles from Peshawar on the Indian side of the Khyber Pass. This pass has been the main trade route to India from the north from the earliest days and most of the trade with far distant Central Asia still follows this route in picturesque caravans.

The question of extending the railway along the trade route was first considered in 1830 and since then three possible routes have been surveyed namely the Loi Shilman route the Mullai ghat Shilman route and the Khyber Pass route.

As a result of a survey rapidly made in 1910 by Colonel G. P. Hearn C.I.E. D. O. M. it was decided to build a railway through the Khyber Pass on a new alignment and after considering the merits of a line built to a two feet gauge a metre gauge with 12 k and a 4-6 gauge adhesion line it was finally decided that

a 5-6" gauge line should be adopted.

The total length of the Khyber Railway is 27.74 miles from Jamrud to the Afghanistan frontier. Although this line is only a short one yet the work entailed has been very heavy starting at a height of about 1,500 it rises to about 8,500 at Landi Kotal and then descends to a height of about 2,400 at Landi Khana.

The ruling grade for up trains to Landi Kotal is 1 in 30; compensated for curvature while that for down trains from Landi Khana is 1 in 25 also compensated.

The line passes through 32 tunnels with a total length of nearly 8 miles. There are in all ten stations excluding Jamrud and of these three are reversing stations. The loss by the development of distance for reductions of gradient.

Financial Results of Working—The total gross earnings of all railways in India during the year 1922-27 amounted to Rs. 11,38 crores as compared with Rs. 11,39 crores in 1925-26. These figures, however, include railways owned by Indian States and companies for which the Government of India has no direct financial responsibility. The figures of receipts and expenditure for railways with which the Government are directly concerned are as follows:—

	(Omitting 000)
	1922-26.
	Rs.
Traffic receipts from Government Railways	99,70.00
Interest on Depreciation and Reserve Fund	38.39
Surplus profits from subsidised Companies' railways	35.07
	<hr/>
Total	1,00,58.46
	<hr/>
	Rs.
Working expenses including depreciation	64,41.96
Surplus profits paid to Companies	1,77.40
Interest on Government Debt	24,81.12
Land and building to Companies	4.94
Miscellaneous	25.03
	<hr/>
Total charges	91,30.81
	<hr/>
Net gain	9,27.67
	<hr/>
Contribution from Railway to Government Revenue	3,48.80
	<hr/>
Railway reserve	8,78.85

After meeting all interest and annuity charges Government therefore received a net profit of Rs. 12 crores as against a profit of Rs. 17 crores in 1923-24. On the capital at charge of the State minus the net receipts that is the gross receipts minus the working expenses, have in recent years given the following returns:—

	Percent
1913-14	5.01
1922-23	4.38
1923-24	5.24
1924-25	5.15
1925-26	5.31
1926-27	4.90

Up to date figures of the results of working of other countries are not available but the following table compares the latest available figures of average receipts per ton mile of those

countries which have published statistics of working later than 1919:—

	Receipts per ton mile Pies.
United States of America 1921	5.80*
United Kingdom 1920	15.17
Japan 1924	22
Switzerland 1924	21.91
	<hr/>
	Receipts per ton mile Pies.
South Australia 1921-25	17.01
Canadian Railways 1925	5.80*
India 1926-27	6.12

* Converted at \$4.50=£1 and at Re 1=1s. 6d.

In the case of receipts per passenger mile the figures for United States of America and India are as follows—

United States of America 192 15 33 pice

India 192 27 3 53 ,

while in England the present fare charged per mile third class is 18 pice

From the above it will be seen that railway transportation of freight in India is probably the cheapest in the world and still more so for passenger traffic

An examination of the latest available figures of operating ratios of foreign countries brings out results not unfavourable to Indian Railway

	Year	Operating Ratio
United States of America	1925	74.05 percent
France—State Lines only	1922	115
All Lines	1922	88.61
English Railways	1920	82.67
South African Railways	1924-25	77.1
Argentine Railways	1921-22	74.34 to 85.20
Canadian Railways	1922	81.48
	1923-24	63.0
	1924-25	60.45
India	1925-26	61.69
	1926-27	62.04

Value of Railway Materials Purchased—The value of materials purchased by Indian railways in 1925-26 fell from Rs 30,00,000 to Rs 23,40,000 including coal and brick kiln etc. the value of Indian material rises from 71 per cent of the total to 101 per cent or 4.5 per cent. It is also seen that the value of foreign materials comes to 5 per cent

	Value of imported materials			Value of indigenous materials	Total purchases 1926-27	Total purchases 1925-26
	Purchased direct	Purchased through Agents in India	Total imported materials			
	Rs crores	Rs crores	Rs crores	Rs crores	Rs crores	Rs crores
Rolling Stock	3.27	0.00	3.27	0.28	4.79	7.10
Tools and stores	0.54	0.00	0.54	0.24	0.60	0.60
Permanent way	0.80	0.00	0.80	0.40	6.6	3.4
Electric plant	0.50	0.00	0.50	0.04	1.35	1.35
Buildings and station material and stores	0.24	0.17	0.41	2.2	0.80	0.90
Bridge work	0.25	0.10	0.35	0.10	0.30	0.40
Workshop machinery	0.42	0.00	0.42	0.01	0.70	0.60
Locomotives and rolling stock	0.21	0.17	0.38	0.04	0.48	0.10
Other Materials*				4.80	4.80	
Total	6.57	0.34	6.91	11.49	23.0	20.40

*Other materials consists of coal stores, fuel and ballast etc. and figures for 1926-27 are not available

Railway Collieries—Good progress was made during 1926-27 with the development of the Faranbadi and Bhurkunda collieries. At Faranbadi the Central Electrical Supply Station was completed and the development of Faranbadi and Faranbadi Collieries will in hand. The output of railway owned collieries during 1926-27 was 1,32,164 tons out of a total of 8,228,000 tons of Indian Coal consumed on Class I Rys.

Number of Staff—The total number of employees on Indian Railways at the end of the year 1926-27 was 71,500 as compared with 71,000 at the end of 1925-26. The increase in number during the same period was 421 and the following table shows the number of employees by communities on 31st March 1927

	Europeans	Native Indians				Grand Total
		Hindus	Muslims	Arabs	Other Classes	
1925-26	5,608	3,42,339	1,68,660	1,91,700	2,20,000	7,50,307
1926-27	4,998	3,50,020	1,68,700	1,90,000	2,20,000	7,53,718

Indianisation—The various Railway Companies managing State and other Railway lines have followed the lead given by Government and accepted the recommendation of the Lee Commission that the expansion of existing training facilities should be pressed forward as expeditiously as possible in order that recruitment in India may be advanced as soon as practicable up to 75 per cent of the total number of vacancies in the Superior Services of the Railway concerned.

Schemes of recruitment—The Secretary of State's approval to the schemes of recruitment and training of superior officers of the State Railways in the main branches of service: (1) Civil Engineering, (2) Transportation, (3) Commercial, and (4) Mechanical Engineering—were received and the Regulations for the recruitment of these services issued under Railway Department Resolution No. 2504-E of 10th July 1926. Schemes of recruitment for the Electrical Engineering and Signal Engineering Departments have been formulated and submitted to the Secretary of State in Council for his approval. Submits for other branches of the service are under consideration. Certain Company worked Railways have expressed their desire to join the Railway Board in their scheme of recruitment and others in their schemes of training the Superior Railway Officers.

Public interest in the question has been maintained during the year finding voice in the press and by interpellations in the Legislature. Considerable progress has been made with the scheme for the training of junior railway officers and of the senior subordinate staff on Indian railways. In this connection a Transportation School was opened at Chandanod on March 2nd 1926.

Progress was also made in 1926-27 towards the formation of a Paddy Training School at Lyallpur for the North Western Railway.

The following table shows the numbers killed and injured separately under passengers railway servants and others for 1925-26 as compared with 1926-27—

	Killed		Injured	
	1925-26	1926-27	1925-26	1926-27
A. Passengers—				
(1) Accidents to trains rolling stock permanent way, etc.	22	16	161	126
(2) Accidents caused by the movement of vehicles used exclusively on railways	352	324	1,181	1,117
(3) Accidents on Railway premises not due to Train accidents or to the movement of vehicles	3	—	81	21
B. Servants—				
(1) Accidents to trains rolling stock, permanent way, etc.	20	—	141	126
(2) Accidents caused by the movement of vehicles used exclusively on railways	337	310	1,285	1,203
(3) Accidents on Railway premises not due to Train accidents or to the movement of vehicles	49	46	1,897	2,004

A temporary training school for the G. I. P. Railway has been established at Bina pending the provision of a permanent school at Betti and the scheme for forming a similar school at Chanda for the P. I. and E. I. Railways is under consideration.

These schools will provide courses of training for probationers before they are allowed to take up regular duties and for members of the staff to enable them to qualify for promotion to the upper grades and in addition to these courses separate refresher courses will be provided through which the entire subordinate staff will be passed through at definite intervals.

College for training Railway Officers at Dehra Dun—The provision of an institution to give practical training to junior officers on railways has been a long felt need. The Railway Transportation School at Chandanod which is meant for the training of subordinates only could neither be suitably extended to provide a college for officers nor afford the facilities necessary for the purpose. The Railway Board have therefore decided to provide a college at Dehra Dun which place is eminently suited for the purpose owing to its climate, situation and proximity to two other similar institutions viz. the Forest Research Institute and the Prince of Wales Royal Indian Military College. The layout of the Railway College is under preparation and it is expected that work will soon be commenced. The scheme is estimated to cost about Rs. 20 lakhs.

Fatalities and Injuries—During 1926-27 there was a decrease of 25 in the number of persons killed and an increase of 127 in the number of persons injured as compared with the figures of 1925-26. The number of passengers killed shows a decrease of 30 while the number of passengers injured shows an increase of 59.

The following table shows the numbers killed and injured separately under passengers, railway servants and others for 1925-26 as compared with 1924-27—*continued*

	Killed		Injured	
	1924-27	1925-26	1924-27	1925-26
Others—				
(1) Accidents to trains rolling stock permanent way etc.	85	19	78	35
(2) Accidents caused by the movement of vehicles used exclusively on railways	2 081	2 107	817	798
(3) Accidents on Railway premises not due to Train accidents or to the movement of vehicles	28	90	68	61
Total	2 918	2 403	5 609	5 738

Of the total number of 2 993 persons killed 1 761 were trespassers on the line and 253 committed suicide. Thus 2 037 or over 70 per cent of the persons killed on railway premises were for causes over which the railways have no control.

Local Advisory Committees.—With the formation of a Committee on the B. N. Ry. during 1926-27 all State-owned Railways now possess Local Advisory Committees. A Committee has also been formed on H. E. H. the Nizam's Guaranteed State Railway the subjects discussed are many and varied including increasing value attached by the public to this scheme for bringing Railways into close touch with their clients. Of the many subjects discussed the following may be mentioned as typical—Overcrowding in trains, time table attractions, Refreshments, drinking water and other facilities for passengers, Reductions and concessions in fares, Goods rates, Construction of new lines and stations, Disposal of Railway Land, and Passengers travelling without tickets.

Compensation for loss and damage to goods in transit.—A great improvement was made during 1923-24 in reducing the amount paid in compensation for loss and damage to

goods in transit the total reduction on Class I Railways being Rs. 41 lakhs in 1923-24 Rs. 22 lakhs in 1924-25 and Rs. 27½ lakhs in 1925-26. This satisfactory result is due to the special attention that has been devoted to the subject by the Railway Board and to the remedial and preventive measures taken by Railway Administrations such as better supervision over the staff, extension of the riving of wagons and improved efficiency of the Watch and Ward Department.

As a result of a resolution adopted in the Legislative Assembly in March 1922 a Committee was appointed to revise the existing risk note forms. The recommendations of this Committee received in September 1922 involved considerable changes in the form of risk notes aiming chiefly at imposing on the railways the onus of proof in cases where losses appeared to be *prima facie* due to misconduct of railway staff. After obtaining the views of Local Governments, Railway Administrations and Chambers of Commerce on these recommendations, the revised forms were referred to the legal advisers of Government. Revised risk note forms A, B, D, G and H from 1st October 1924.

THE CHIEF RAILWAYS IN INDIA

The Assam Bengal Railway which is constructed on the metre gauge, starts from Chittagong and runs through Surma Valley across the North Cachar Hills into Assam. It is worked under a limited guarantee by a company.

Mileage open	1 043 000
Capital at charge	Rs. 2,11,14,000
Net earnings	Rs. 91,11,000
Earnings per cent	4 11.

Bengal and North Western.

The Bengal and North Western Railway was constructed on the metre gauge system by a company without any Government assistance other than free land and was opened to traffic in 1885. The system was begun in 1874 as the Tirhut State Railway. In 1890 this line was leased by Government to the Bengal and North Western Railway. Since then extensive additions have been made in both

sections. It is connected with the Rajputana metre gauge system at Cawnpore and with the Eastern Bengal State Railway at Khathlar and the Oudh and Rohilkhand Railway at Benares.

Mileage open	2,079 10
Capital at charge	Rs. 20 11 41 000
Net earnings	Rs. 2,28 61 000
Earnings per cent	11 12

Bengal Nagpur

The Bengal Nagpur Railway was commenced as a metre gauge from Nagpur to Jabalpur in the Central Provinces in 1887. A company was formed under a guarantee which took over the line, converted it to the broad gauge and extended it to Howrah, Cuttack and Katni. In 1901 a part of the East Coast State Railway from Cuttack to Visakhapatnam was transferred to it and in the same year sanction was given for an extension to the

coal fields and for a connection with the branch of the East Indian Railway at Barharpur

Mileage open	31,41 36
Capital at charge	Rs 68,80,29 000
Net earnings	Rs 8,44,45 000
Earnings per cent	5 1

Bombay Baroda

The Bombay Baroda and Central India Railway is one of the original guaranteed railways. It was commenced from Surat via Baroda to Ahmedabad, but was subsequently extended to Bombay. The original contract was terminable in 1880 but the period was extended to 1905 and then renewed under revised conditions. In 1885 the Rajputana Malwa metre gauge system of State railways was leased to the Company and has since been incorporated in it. On the opening of the Nagda Muttra giving broad gauge connection through Eastern Rajputana with Delhi the working was entrusted to this Company. On the acquisition of the Company in April 1907 the purchase price was fixed at £11,685,581.

Mileage open	3,95, 00
Capital at charge	Rs 73,84,10 000
Net earnings	Rs 4,51,71 000
Earnings per cent	6 1

Burma Railways

The Burma Railway is an isolated line and although various routes have been surveyed there is little prospect of its being connected with the Railway system of India in the near future. In reply to a question in the Imperial Legislative Council in 1919 Sir Arthur Anderson said—During 1914 15 extensive survey operations were carried out to ascertain the best alignment for a railway connection along the coast route between Chittagong and certain stations on the Burma Railways south of Mandalay. A rival route via the Hukong Valley between the northern section of the Assam Bengal Railway and the section of the Burma Railways north of Mandalay was to have been surveyed during the following year but was postponed because of the war. It is now proposed to commence this survey during the coming cold weather and on its completion Government will have sufficient information to enable them to decide which route shall be adopted. Thus no arrangements for the construction of a line have yet been made nor has any concession been granted, but it is probable that the line selected will be built at the cost of Government and worked by one or other of the main lines which it will connect. It was commenced as a State Railway and transferred in 1896 to a Company under a guarantee.

Mileage open	1,882 57
Capital at charge	Rs 20,48,25 000
Net earnings	Rs 1,70,41 000
Earnings per cent	8 08

Eastern Bengal.

The Eastern Bengal State Railway was promoted under the original form of guarantee and was constructed on the broad gauge. The first portion of the line running to Calcutta over the Ganges was opened in 1862. In 1874 sanction was granted for the construction on the metre gauge of the Northern Bengal State Railway, which ran from the north bank of

the Ganges to the foot of the Himalayas on the way to Darjeeling. These two portions of the line were amalgamated in 1884 into one State Railway.

Mileage open	1,715 88
Capital at charge	Rs 46,21,58 000
Net earnings	Rs 4,42,44 000
Earnings per cent	5 25

The East Indian.

The East Indian Railway is one of the three railways sanctioned for construction as experimental lines under the old form of guarantee. The first section from Howrah to Pandua was opened in 1854 and at the time of the Mutiny ran as far as Raniganj. It gives the only direct access to the port of Calcutta from North-east India and is consequently fed by all the large railway systems connected with it. In 1889 the Government purchased the line, paying the shareholders by annuities but leased it again to the company to work under a contract which was terminable in 1919.

The contract was not terminated until January 1st 1925, when the State took over the management.

Mileage open	2,688 65
Capital at charge	Rs 1,36,26,08 000
Net earnings	Rs 7,99,64 000
Earnings per cent	5 65

Great Indian Peninsula

The Great Indian Peninsula Railway is the earliest line undertaken in India. It was promoted by a Company under a guarantee of 5 per cent and the first section from Bombay to Thana was open for traffic in 1853. Sanction was given for the extension of this line via Poona to Raichur, where it connects with the Madras Railway and to Jubbulpore where it meets the East Indian Railway. The feature of the line is the passage of the Western Ghats these sections being 10½ miles on the Bhor Ghat and 9½ miles on the Thul Ghat which rise 1,131 and 972 feet. In 1900 the contract with the Government terminated and under an arrangement with the Indian Midland Railway that line was amalgamated and leased to a Company to work.

The contract was terminated on June 30th 1905 when the State took over the management.

Mileage open	36,70 56
Capital at charge	Rs 119,19,57 000
Net earnings	Rs 4,51,41 000
Earnings per cent	3 89

Madras Railway

The Madras Railway was the third of the original railways constructed as experimental lines under the old form of guarantee. It was projected to run in a north westerly direction in connection with the Great Indian Peninsula Railway and in a south westerly direction to Calicut. On the expiry of the contract in 1867 the line was amalgamated with the Southern Mahratta Railway Company, a system on the metre gauge built to meet the famine condition in the Southern Mahratta Country, and released to a large Company called the Madras and Southern Mahratta Railway Company.

Mileage open	Rs. 2,041.73
Capital at charge	Rs. 57,30,24,000
Net earnings	Rs. 3,82,68,000
Earnings per cent.	4.67

The North Western.

The North-Western State Railway began its existence at the Sind Punjab-Delhi Railway, which was promoted by a Company under the original form of guarantee and extended to Delhi, Multan and Lahore and from Karachi to Kotri. The interval between Kotri and Multan was unbridged and the railway traffic was exchanged by a ferry service. In 1871-72 sanction was given for the connection of this by the Indus Valley State Railways and at the same time the Punjab Northern State Railway from Lahore towards Peshawar was begun. In 1886 the Sind Punjab-Delhi Railway was acquired by the State and amalgamated with these two railways under the name of the North Western State Railway. It is the longest railway in India under one administration.

Mileage open	6,330.93
Capital at charge	Rs. 1,36,28,30,000
Net earnings	Rs. 48,26,000
Earnings per cent.	4.02

Oudh and Rohilkhand.

Oudh and Rohilkhand Railway was another of the lines constructed under the original form of guarantee. It began from the north bank of the Ganges running through Rohilkhand as far as Saharanpur where it joins the North Western State Railway. It was not until 1887 that the bridge over the Ganges was completed and connected with the East Indian Railway. To effect a connection between the metre gauge systems to the North and those to the South of the Ganges; a third rail was

laid between Bhurwal and Cawnpore. The Company's contract expired in 1889 when the Railway was purchased by the State and has since been worked as a State Railway.

The working of this railway was amalgamated with that of the East Indian Railway from 1st July 1923.

The South Indian

The South Indian Railway was one of the original guaranteed railways. It was begun by the Great Southern India Railway Company as a broad-gauge line but was converted after the seventies to the metre-gauge. This line has been extended and now serves the whole of the Southern India South of the south west line of the Madras Railway. Between Tuticorin and Ceylon a ferry service was formerly maintained, but a new and more direct route to Ceylon via Rameshwaram was opened at the beginning of 1914. As the original contract ended in 1907 a new contract was entered upon with the Company on the 1st of January 1908.

Mileage open	1,911.98
Capital at charge	Rs. 33,80,09,000
Net earnings	Rs. 2,70,61,000
Earnings per cent.	8.13

The Indian States

The principal Indian State Railways are the Nizam's, constructed by a company under a guarantee from the Hyderabad State. The Kathiawar system of railways constructed by subscriptions among the several Chieftains in Kathiawar the Jodhpur and Bikaner Railways, constructed by the Jodhpur and Bikaner Chieftains the system of railways in the Punjab, constructed by the Patiala, Jind, Maler Kotla, and Kashmir Chieftains and the railways in Mysore, constructed by the Mysore State.

PROGRAMME OF FUTURE CONSTRUCTION

At the end of the financial year 1920-21 a total of 2,564 miles of new lines was under construction distributed as follows—

	Miles
3 6 gauge	932.13
3 1 1/2 gauge	1,280.07
2 6 gauge	360.21

During 1925-26 sanction was accorded to the construction of new lines totalling 1,102.18 miles

	Miles
5 6 gauge	1,045.68
3 3/4 gauge	249.17
2 6 gauge	38.54

Khyber Railway

The construction of the Khyber Railway, a length of about 28 miles was sanctioned in July 1920 and in November of that year after various preliminary difficulties had been overcome the work of construction actually commenced. Owing to the peculiar and arduous conditions under which the construction had to be carried out, five years elapsed before the section from Jamrud to Landikotal, a length of about 21 miles was completed and opened for public traffic on 2nd November 1925. The remaining portion from Landikotal to Landikhan is was opened on 8/4/26.

This is the first 5 feet 6 inches gauge line which has been built to the new standard dimensions and allows for a maximum running width of 12 feet and running height of 16 feet 6 inches. The great engineering difficulties which have had to be overcome and the standard to which the railway has been built render it a technical achievement ranking with the greatest engineering works carried out by Railway Engineers.

The line is situated entirely outside the administrative border of British India in the strip of tribal territory which separates it from Afghanistan. The trade that passes through the Khyber Pass is already considerable and it is hoped that the railway will still further increase its volume thereby bringing profit and employment to many who in the past have subsisted with difficulty on the meagre agricultural resources of the country which it traverses.

Lines under Construction

Of the total of 2,564 miles of lines of various gauges under construction at the end of the year those mentioned below are the more important including three (the Kasipet Ballarshah, the Central Indian Coalfields line and the Raipur-Vijayanagarum) which are being built to serve extensive undeveloped areas.

Karipet Ballarshah

The Ballarshah Extension of the N G S Railway 160 miles long is perhaps of first importance for it will open up a new broad gauge route from Madras to the North and effect a saving in distance of some 200 miles in the journey from Madras to Delhi. The section from Karipet to Padanelli has been already opened to traffic, and construction is now well advanced on the remaining portion which passes through a difficult tract of country between the Godavari and Wardah river where there are large bridges. Good progress has been made with these bridges and the portion of the line between the two rivers is being rapidly completed. It is hoped that it will be possible to open it throughout for public traffic by the end of 1927.

The Central Indian Coalfields Railway

This broad gauge project is important as opening the way for the development of the South Karanpura and Koria Coalfields. It will also open a shorter route for coal traffic to the North West and West.

Of the two sections under construction the Daltonganj Barkakhana (113 miles) and the Anupur Karbundi (40 miles) progress during 1926-27 has on the whole been satisfactory but on the former section considerable damage was done by floods which delayed work. It is hoped to have both sections ready for opening to traffic by December 1928.

Rampur-Vizianagram Railway

This trunk line on the 5'6" gauge 261 miles in length, passes through a large undeveloped area and will provide direct communication between the Central Provinces and the new Harbour now under construction at Vizianagram on the east coast. The section of the line from Vizianagram to Parvatipuram 48 miles long was completed and opened to traffic in 1924.

During 1926-27 some realigning work has been carried out which will appreciably reduce the length of the line. Work at the northern and southern ends is progressing well but on the middle portion sickness and delay in obtaining possession of land have impeded progress. The line will be opened by sections as they are ready but it is not expected that the whole line will be opened throughout till 1931.

Calcutta Chord Railway

Progress has been rather slow on account of the exceptional nature of the works completed in the scheme and the coal strike in England seriously delayed the supply of heavy plant required for sinking the caissons of the Bally Bridge. This was expected to arrive in October 1926 but did not begin to arrive till April 1927.

The connection will probably not be completed till 1930.

Amritsar Darawal Railway

The construction of this line about 40 miles long on the N W Railway broad gauge was sanctioned in February 1926. It will traverse a fertile and well irrigated area and facilitate

pilgrimage to the Sikh shrines at Dera Baba Nanak and Kartarpur by giving a direct connection between Amritsar and Jammu. It is also expected to stimulate the already considerable trade between the former and Kashmir. A length of 28 miles up to Dera Baba Nanak from the Amritsar end will be opened shortly but the remainder including a large bridge over the Ravi River is not expected to be finished until 1928.

Chak Jhumra Khushab Railway

The construction of this broad gauge chord line by the N W Railway was sanctioned in two parts (a) from Chak Jhumra to Chinkot in November 1926 and (ii) the remainder in April 1927. It will provide a direct connection between the Lyallpur District and Shahpur which is badly required and will also provide a shorter alternative route to Waziristan to the relief of the main line north of Lahore. About 80 miles of new line are involved and two large bridges over the Chenab and the Lum rivers. It is hoped to open this line in 1929.

The Illupuram Trichnapoly Railway

The construction of this metre gauge chord on the S E Ry. 110 miles long, was put in hand in the year 1925-26. It is being built to main line standard and will form an alternative route between Madras and Trichnapoly. Its importance lies mainly in the relief it will afford to the existing main line but it will also serve to open up and develop a populous tract of country.

Progress has been satisfactory but the supply of permanent way material has been interfered with by the coal strike in England. It is hoped to have the line ready for opening to traffic by the end of 1928.

The Shoranur Nalambur Railway

The construction of this broad gauge branch on the S E Railway 41 miles long was sanctioned in May 1924. It is designed to open out and develop the Moplah country in the Malabar District with its important forest areas from Shoranur to Angadipuram (13 miles) was opened to traffic by H E the Governor of Madras on the 3rd of February 1927 and it is hoped to have the remaining and more difficult portion ready for opening by June 1927.

Kangra Valley Railway

This line is a 2'6" gauge extension from the N W Ry. broad gauge terminal at Pathankot, and traverses the wide and fertile tract known as the Kangra Valley. The line will shorten the journey to the important hill station of Dalhousie and Dharamsala.

The Punjab Government which has in hand the construction of the Uhl Hydro Electric Scheme had agreed to guarantee this line against loss in working over a number of years as a rail connection of some 100 miles is necessary for the transport of machinery and stores required for the Hydro Electric Scheme and for maintenance of the transmission lines after opening.

New Construction Programme

In recent Annual Reports reference has been made to the arrangements and investigations which were being made with a view to the adoption of a largely increased programme of new construction. The figure of mileage under

construction has been steadily growing and the efforts of the Railway Board and the Railways Administration have now materialised in the production of a 5 year programme of constructions by each of the large Railways. These programmes have been prepared in collaboration with the Governments of the Provinces served by the several Railway systems and subsequently discussed by the Agents with the Railway Board. The programme laid down more or less provides for the annual revision of them after further consultation with the Local Governments.

It cannot of course be expected that every one of the many projects which have been included in the programme will prove to be financially justifiable, but since the sum of the total additional open line mileage shown in them amounts to over 7,000 miles at the end of the quinquennium there appears to be no reason why the anti-stagnation in last year's Report in regard to an annual addition of 1,000 miles to the open mileage of Indian Railways should not be realised.

Indian Railway Engineers employed on the big Railway systems have sometimes been criticised in the past for a lack of ability to design low grade railways so that the construction cost may be commensurate with the traffic that is expected to be carried and it is recognised that in order to build some of the lines included in the construction programme on a remunerative basis special attention must be paid to the necessity for this. Although therefore there has been nothing authoritative in the past to preclude the building of heavy feeder lines it has been thought advisable to encourage Railway Administrations to give special consideration to the question by laying down on broad line certain standards of constructions to suit different traffic requirements. These standards range from the highest class designed for lines which have to carry a fast and heavy traffic down to the lightest form of construction and include feeder lines of lower gauge than the parent lines.

Electrification of Railways

The electrification of railway lines in the Bombay area at present in hand comprises (a) on the G. I. P. Ry. the suburban lines up to Kalyan and the main lines to Igatpuri and Poona; (b) on the B. B. & C. I. Railway the suburban lines between Church Gate and Borivli and the main line between Grant Road and Bandra. The work on the electrification of the G. I. P. Ry. lines has reached an advanced stage and electrified services have already been opened between Victoria Terminus and Kurla and Thane via the Harbour Branch and between Victoria Terminus and Bandra. These services have become highly popular and promise to be extremely successful.

With a view to inaugurating electrified services on the whole of these sections as early as possible the work on the uncompleted portions is being vigorously pushed forward. By the opening of these electrified services not only will Bombay derive a great benefit in the matter of a better distribution of its population but on the railway side a considerable reduction in the operating expenses will be effected.

Re-investigation into the electrification of suburban lines in the vicinity of Calcutta and

Madras were also completed during the year. The result of these investigations are at present under consideration. Proposals for the electrification of the Trichinopoly-Madras and other sections of the S. E. Railway have also been under consideration by the Railway Board in view of the probability of the supply of cheap power from hydro electric sources.

An examination of hydro electric schemes in the Madras Presidency of which mention was made in the last year's report was carried out during the year and the results of these investigations were under discussion with the Government of Madras at the end of the year.

Dindigul Pollachi

The construction of this line—75 miles, 3 ½ gauge—was sanctioned in April 1925. When completed it will link up the isolated metre gauge Podanur-Pollachi branch with the South Indian metre gauge system and while providing direct communication between the West Coast and the Madras District will open up the intervening districts. The probable date of opening is 31st March 1928.

Madurai-Bodinayakanur

This line 55 miles 3 ½ gauge is of considerable importance from the administrative point of view as it will help to open up the tract of country between the South Indian Railway main line and the Travancore Hills. It is expected that while facilitating trade and generally assisting in the development of this rich tract of country the branch will attract considerable passenger traffic to the trade centres of Theni and Bodinayakanur.

Vijayawada-Varasatpuri and Gudivada-Bhimavaram Railways

These lines which branch off the Madras and Southern Mahratta Railway system will provide railway communication in the densely populated portions of the Kistna and Godavari deltas where owing to the number of canals existing communications are inconvenient.

It is anticipated that they will be opened for traffic in 1928.

Ajra-Bak

This line will open out an irrigated tract of the Ajra District situated at the head of the Jamshedpur Canal. At present devoid of railway communication.

Calcutta Chora Railway

This line starts from a point near Dankheri station on the Bardwan Howrah Chord of the East Indian Railway and joins the Eastern Bengal Railway near Dum Dum Junction.

It is about 8 miles in length and includes a bridge over the Hooghly river at Bally. This connection is primarily intended for export of coal from the East Indian Railway. But it is likely in the near future to be used also for coal from the Bengal Nagpur Railway Coalfields and with the developments anticipated in the terminal arrangements at Calcutta and the electrification of the lower portion of the Eastern Bengal Railway a large proportion of the suburban passenger traffic will eventually pass over it.

INDIA AND CEYLON

The possibility of connecting India and Ceylon by a railway across the bank of sand extending the whole way from Rameswaram to Mannar has been reported on from time to time since 1895 various schemes having been suggested.

The South Indian Railway having been extended to Dhanushkodi the southernmost point of Rameswaram Island, and the Ceylon Government Railway to Talaimannar on Mannar Island two points distant from each other about 21 miles across a narrow and shallow strait the project has again been investigated with the idea of connecting these two terminal stations by a railway constructed on a solid embankment raised on the sand bank known as Adam's Bridge to supersede the ferry passenger service which has been established between these two points.

In 1918 a detailed survey was made by the South Indian Railway Company and a project has now been prepared. This project contemplates the construction of a causeway from Dhanushkodi Point on the Indian side to Talaimannar Point on the Ceylon side a length of 20.05 miles of which 7.19 will be upon the dry land of the various islands and 12.86 will be in water. The sections on dry land will consist of low banks of sand pitched with coral and present no difficulty. The section through the sea will be carried on a causeway which it is proposed to construct in the following way: A double row of reinforced concrete piles pitched at 10 feet centres and having their inner face 14 feet apart, will first be driven into the sand. These piles will then be braced together longitudinally with light concrete arches and chains and transversely with concrete ties, struts and chains. Behind the piles slabs of reinforced concrete will be shipped into position, the bottom slabs being sunk well into the sand of the sea bottom. Lastly the space enclosed by the slabs will be filled in with sand.

The top of the concrete work will be carried to six feet above high water level and the rails will be laid at that level. The sinking of the piles and slabs will be done by means of water jets. This causeway it is expected will cause the suspended sand brought up by the currents to settle on either side bringing about rapid accretion and eventually making one big island of Rameswaram Island and Mannar Island.

Indo Burma Connection

The raids of the Emden in the Bay of Bengal in 1914, and the temporary interruption of communications between India and Burma stimulated the demand for a direct railway connection between India and Burma. Government accepted the position and appointed Mr. Richards M. Inst. C.E. to be the engineer-in-charge of the surveys to determine the best route for a railway from India to Burma. The

coast route appears to be the best one but at present would not be remunerative. This would start from Chittagong, which is the terminus and head quarters of the Assam Bengal Railway and a seaport for the produce of Assam. The route runs southwards through the Chittagong district a land of fertile rice fields intersected by big rivers and tidal creeks and it crosses the Indo Burma frontier 94 miles from the town of Chittagong. For about 180 miles further it chiefly runs through the fertile rice lands of Arrakan and crosses all the big tidal rivers of the Akyab delta. These include the Kaladan river which drains 4,700 miles of country and even at a distance of about 30 miles from its mouth is more than half a mile wide. About 280 miles from Chittagong the railway would run into the region of mangrove swamps which fringe the seacoast north and south of the harbour of Kalkkphu stretching out into the mangrove swamps like ribs from the backbone. Numerous spurs of the Arrakan Yoma have to be crossed. Yoma is a mountain ridge which extends from Cape Negrais northwards until it loses itself in a mass of tangled hills east of Akyah and Chittagong. At its southern end the height of the ridge is insignificant but it has peaks as high as 4,000 feet before it reaches the altitude of Sandway and further north it rises much higher. It is a formidable obstacle to railway communication between India and Burma. This route is estimated to cost about £7,000,000 and would have to be supplemented by branch lines to Akyah where there is at present a considerable rice traffic and the cost of this would have to be added to the £7,000,000 already referred to.

The other routes examined have been the Hukong Valley route and the Manipur route which were surveyed by the late Mr. R. A. Way many years ago. The Manipur route was estimated to cost about £5,000,000 as it has to cross three main ranges of hills with summit levels of 2,650, 3,400 and 5,900 feet long. Altogether there would be about four miles of tunnelling through the three main ridges and through other hills and more than 100 miles of extensive undulating railway with grades as steep as 1 in 50 and 11,000 feet of aggregate rise and fall. The Hukong valley route is only about 234 miles long and it presents fewer engineering difficulties than either the Coast or the Manipur route. One hundred and fifty miles of this route lie in open country capable of cultivation though at present it is only very thinly populated. Only one range of hills has to be crossed and this can be negotiated with a summit tunnel of 5,000 feet long at a height of 2,500 feet. There are less than fifty miles of very heavy work and only about 4,500 feet aggregate of rise and fall. The Hukong Valley route although cheaper than the Manipur route is not a practical financial proposition and both may be ruled out of consideration.

Main results of working of all Indian Railways treated as one system.

(a) Value for b

(b) Export values

(c) Revised

The feature which stands out most prominently in a survey of the mineral industries of India is the fact that until recent years little has been done to develop those minerals which are essential to modern metallurgical and chemical industries while most striking progress has been made in opening out deposits from which products are obtained suitable for export or for consumption in the country by what may conveniently be called direct processes. In this respect India of to-day stands in contrast to the India of a century ago. The European chemist armed with cheap supplies of sulphuric acid and alkali, and aided by low sea freights and increased facilities for internal distribution by the spreading network of rail ways has been enabled to stamp out, in all but remote localities the once flourishing native manufactures of alum, the various alkaline compounds, blue vitrol, copperas, copper lead steel and iron and seriously to curtail the export trade in nitre and borax. The reaction against this invasion is of recent date. The high quality of the native made iron, the early anticipation of the processes now employed in Europe for the manufacture of high-class steels and the artistic products in copper and brass gave the country a prominent position in the ancient metallurgical world, while as a chief source of nitre India held a position of peculiar political importance until, less than forty years ago the chemical manufacturer of Europe found among his by-products cheaper and more effective compounds for the manufacture of explosives.

With the spread of railways the development of manufactures connected with jute, cotton and paper and the gradually extended use of electricity the demand for metallurgical and chemical products in India has steadily grown. Before long the stage must be reached at which the variety and quantity of products required but now imported will satisfy the conditions necessary for the local production of those which can be economically manufactured only or the supply of goods of industries.

Coal

Most of the coal raised in India comes from the Bengal and Bihar and Orissa—Gondwana coal fields. Outside Bengal and Bihar and Orissa the most important mines are those at Singareni in Hyderabad and in Central Provinces but there are a number of smaller mines which have been worked at one time or another.

The subjoined statement shows the production of all mines in British India and in Indian States during 1926 as compared with 1925—

Province	1925	1926
	Tons.	Tons.
Assam	318,842	301,661
Baluchistan	34,797	15,546
Bihar	4,918,302	5,130,688
Bihar and Orissa	13,936,009	13,960,770
Burma	5	
Total	20,904,877	20,999,167

Province	1925	1926
	Tons.	Tons.
Central India	19,106	216,008
Central Provinces	708,554	689,200
Hyderabad	667,871	637,773
Punjab	74,600	68,043
Rajputana	28,153	31,000
Total	20,904,877	20,999,167

Coal Prices.—The value of the coal produced in India is reported annually by mine owners. It represents the actual or estimated wholesale price of coal at the pit's mouth. In 1926 the average value was Rs. 4.13 per ton. The lowest value namely Rs. 2.8 per ton was recorded in 1905 and the highest (Rs. 7.11) in 1920 when demand kept ahead of supply. The table below compares the average value at pit's mouth of Indian coal with the declared export value per ton in each of the last five years. The declared export value is generally over twice the value at the pit's mouth. The total estimated value at pit's mouth of the output in 1926 was Rs. 10 lakhs as compared with (Rs. 12.64 lakhs) the estimate for 1925.

AVERAGE VALUE OF COAL

Declared Value at the export value pit's mouth per ton

	Rs. A.	Rs. A.
1922	13.9	7.11
1923	17.0	7.7
1924	18.9	7.1
1925	10.0	6.1
1926	12.14	4.13

With the above average value may be compared the values at the pit's mouth of coal in foreign countries as shown below (the figures are the average of the last five years for which quotations are available).

	Rs. A.
United Kingdom	14.8
Australia	11.7
Japan	10.1
United States of America	10.10
India	6.10
South Africa	4.13

It must be borne in mind that this value is affected by many factors such as the quality of the coal raised, its accessibility, the machinery in use, nearness to the surface, etc. besides the differences in the cost of labour and transport. In India a large percentage of the coal which is now being worked is comparatively near the surface and labour comparatively cheap. Indian coal therefore has a lower value at the pit's mouth than the coal of any other country except South Africa.

The comparative average prices per ton of Bengal coal (Desharbhur) at Calcutta, of Indian Welsh and Natal coal at Bombay and Karachi from 1912 to 1926 are shown in table 5 (page 26). In 1926 prices of coal fell in all the ports of Calcutta, Bombay and Karachi.

Coal Consumption 1926

Total population	320 *61 000*
1 reduction of coal	tons 20 989 10*
Imports of coal	1339 8
Exports of coal	461 711
Excess of exports over im- ports	46* 70*
Total quantity retained for home consumption	20 51 41†
Estimated consumption per head of population	0 06

* According to the census of 1921 with in round of 1 19 per mille per annum and excluding figures for Aden and the Andamans and the Nicobar Islands

† Including bunker coal and coal shipped on Admiralty and the Royal Indian Marine Accounts.

Persons employed in the Coal mining industry

In 1926 18,749 persons were employed daily as against 18928 in 1925 a decrease of 11 persons or 1 9 per cent.

The table below gives the output per head employed (1) above and below ground and (2) below ground in certain specified countries (for details see table 21 page 41). This comparison is somewhat vitiated as the figures are for different years but nevertheless they are not without some significance. They cannot, however be taken to give a strictly accurate idea of the relative efficiency of the labour in the countries named. Not only do the conditions of the work below ground vary greatly but the proportion of persons employed above and below ground is different in the different countries. In Great Britain, in 1925 for example the workers below ground were 40 per cent of the total number employed while in the same year in India where mineral operations are still nearly all surface they were 64 per cent. The efficiency of the Indian miner

is much below that of miners in most other countries. Further labour saving appliances are used only to a small extent in comparison with other countries. During the last few years the number of coal cutting machines in use in Indian Mines has steadily increased but towards the end of 1925 owing to the continued falling off in the demand for coal a number of machines were withdrawn. The provision of modern screening and loading plants is also receiving increased attention. At present about 4 000 000 tons of coal is mechanically screened and it is anticipated that by 1930 the figure will have increased to 4* 0000 tons. Practically all large collieries have either plants actually at work or in course of erection.

	Above and below ground 1 or head	Below ground only Per head
	Tons	Tons.
United States	894	1923
Great Britain	221	1927
France	24	1925
France	133	1926
Belgium	18	1925
Japan	122	1925
India	111	1925
	11	1926

The per cent output of coal in India in 1926 is compared below with the results of the preceding five years —

	Above and below ground Tons.	Below ground only Tons
1925	94 8	101
1924	9 8	165 7
1923	103 8	166 8
1922	110	173 1
1921	113 1	180 9

THE INDIAN COAL COMMITTEE.

The Indian Coal Committee which was appointed by the Government of India in September 1924 was in the main the outcome of a resolution adopted by the Legislative Assembly in March of that year recommending on economic grounds the imposition of a countervailing duty on South African coal imported into India. Before referring to the Tariff Board the question whether the Indian coal trade was in need of protection against coal from South Africa or against imports of foreign coal generally the Government decided that the technical aspect of the question should be investigated by an expert committee with the following terms of reference — To enquire and report (1) generally what measures can be taken by Government, by the coal trade by the railways and by the ports whether singly or in combination to stimulate the export of suitable coal from Calcutta to Indian and foreign ports (2) in particular whether effective measures can be taken for the pooling and grading of Indian coal for export and for bunkering, and how the cost of such measures should be met

The members of the Committee which met at Calcutta on October 22nd, were Mr F Noyce C.S.I. O.B.E. I.C.S. Secretary to the Government of Madras, Development Department, (President) Mr C. S. Whitworth Chief Mining Engineer to the Railway Board Mr C. Stuart Williams Chairman of the Calcutta Port Trust Mr J. W. A. Bell of Messrs Mackinnon Mackenzie & Co. Mr F. C. Leyce O.B.E. Director of the Railway Wagon Pool Sir Rajendranath Mukherjee K.C.I.E. K.C.V.O. of Messrs Martin & Co. Mr A. A. F. Bray Chairman of the Indian Mining Association and Mr W. C. Banerjee Vice Chairman of the Indian Mining Federation with Mr H. P. V. Townsend I.C.S. as Secretary. Its investigations which included visits to Bangalore, Penang, Singapore, Colombo, Madras, Bombay and Karachi lasted some five months its Report being signed on March 28th, 1925.

Export Trade—Chapter I of the Report contains a review of the situation which led to the appointment of the Committee and a detailed examination of the position in those Indian and foreign ports in which Indian coal is or has been

imported. The export of coal from India which is almost entirely confined to Calcutta falls under three heads: exports to foreign countries, exports to Indian ports and bunker coal. The history of the export trade in coal likewise falls into three periods, pre-war, war and post-war. The varying fortunes of the three branches is most succinctly shown by the following figures for typical years—

Year	Export of coal to foreign countries	Export of coal coast-wise to Indian ports	Bunker coal (Calendar years)	Total.
1913-14	887,362	2,210,517	905,000	4,002,879
1918-19	142,041	101,922	979,000	1,222,963
1920-21	185,722	1,408,688	198,000	1,792,410
1922-23	97,611	812,136	575,000	1,484,747

The very heavy drop in the exports of coal to foreign countries after 1920-21 was due to the restrictions on export which were imposed in the interests of Indian industrial requirements in July 1920 leading to the total prohibition of export from March 1921 except on a reduced scale to the Ceylon Government Railways. These restrictions were not entirely removed until January 1st 1923 and by that time had led to the disappearance of Indian coal from overseas markets for the time being.

The Report proceeds to examine the nature of the competition met by Indian coal both in the overseas markets in which is endeavouring to regain a footing and in the principal home ports. Bangalore, Madras, Bombay and Karachi in which its extension by foreign imports cannot be attributed to the embargo placed on export. For overseas ports the Committee point out that the quality and price of the supplies obtained from other sources especially from South Africa after the embargo was imposed proved so satisfactory that the pre-war position has been entirely reversed and established business relations are now an obstacle to the reintroduction of Indian coal even in markets like Colombo where it once held a commanding position. In Indian ports the quality of the coal supplied has been the most important factor with the purchasers. The conclusion of the Committee thus is that Indian coal cannot hope to hold its own much less to recover its old position both in home and overseas markets unless its quality and price are such as to commend it to consumers.

In Chapter II the Committee proceed to discuss the comparative merit and prices of Indian and other coals. An instructive table of analyses shows that there are a large number of coals both in the Raniganj and Jharia coal fields (by far the two most important fields in India) which yield coal which compares most favourably in quality with South African, Japanese or Australian coal. The calorific value of the coal produced by these collieries is only slightly less than that of Natal and Australian coal, is slightly higher than that of Japanese coal, is considerably higher than that of Transvaal coal. As regards price the Report, in an elaborate series of calculations, shows that Indian coal can only

hope to compete in overseas markets if its pithead price is not more than Rs. 2 to Rs. 2-8-0 for Singapore, Rs. 5-5-0 for Colombo and Rs. 6 for Bombay and Karachi. For Madras and Bangalore the imports of foreign coal are small and the prices of those coals cannot be considered to govern the market. As the average ruling costs cannot be placed at less than Rs. 5 per ton for the Raniganj field and Rs. 6 per ton for the Jharia field, it is obvious that in present conditions coal for export can only be produced at a loss. The Committee therefore proceed to discuss the possibilities of economies at the various stages through which coal passes from the seam to the consumer: viz. at the pit, on the railway, at the Calcutta docks and on the steamer. The charges at the port of import are the same for Indian and foreign coals except that in Indian ports Indian coal has the advantage of exemption from the customs duty of eight annas a ton which is imposed on other coal.

Economies at the Coal Fields—Chapter III deals with the possibilities of economies at the coal fields. It is held that there is no scope for any reduction in wages whilst the increased use of mechanical appliances for coal cutting would not reduce raising costs unless it were accompanied by an improvement in railway facilities which would permit of an increased output. Some small improvements in working methods might be made in some mines but there are only two methods by which any appreciable reduction in raising costs can be secured. These are an increase in output by an extension of machine working and the avoidance of stockpiling by loading all coal raised direct into wagons. As the latter were done less from waste, deterioration and theft would be prevented and the raising costs would be reduced by something like eight annas a ton. Both methods of reducing costs in the coal fields thus depend on an improvement of the railway facilities and this brings the Committee to a detailed examination of the working of the two railways which serve the main Indian coal fields: the East Indian and the Bengal Nagpur Railways.

Railway Problems—In Chapter IV the provision of a regular and adequate wagon supply throughout the year is considered essential. A number of recommendations for securing this are made the most important of which are the enlargement of the depot stations, the general adoption of the system already in force on certain of the colliery sections on the East Indian Railway of supplying wagons to the collieries before 7 a.m. and clearing them after 5 p.m., the supply of wagons to the individual collieries at regular hours, the installation of weighbridges wherever practicable in order to avoid delays in weighing the assembly by the railway in full trainloads of wagons intended for the same ship and a constant check at every stage of the movement of wagons from the coalfields to the docks and back. Chapter V is devoted to the question of railway freights, terminals and rebates. The Report points out that working expenses on both railways have increased in recent years by a very much higher percentage than have their ultimate receipts from coal and that it is impossible to calculate the exact cost of hauling one ton of coal one mile. No comparison between the cost of hauling it on of coal for a mile and the rate charged for it can thus be made but

a comparison between the present railway rates charged on export coal in India and in South Africa is favourable to Indian coal.

The Committee therefore hold that, whilst there is no statistical case for increasing the rebate of 25 per cent at present granted on export coal in India this should be increased to 37½ per cent, that is roughly by eight annas per ton on the general grounds of the importance of the coal trade in the industrial economy of the country and the admittedly inadequate character of the railway facilities for moving it. The grant of a rebate on bunker coal is not recommended as it is not considered that this would have any appreciable effect in increasing the attractiveness of Calcutta as a bunkering port.

In Chapter VI some general recommendations in regard to railway work are made. Improvements in the system under which the collieries submit for wagons are suggested. It is recommended that collieries should be permitted to put in their own sidings these to be taken over subsequently by the railways on suitable terms. If the traffic passing over them is found to yield a return of 6 per cent on the capital outlay. The difficulties arising from the overloading of wagons which have given rise to much criticism from the coal trade it is proposed to remove by the provision of a type of wagon which when loaded flush with the top would not have too heavy a load what over the specific gravity of the coal carried in it. It is suggested that the feasibility of providing such a type of wagon should be investigated by a small expert committee and that, meanwhile all wagons should be marked with a mineral loading index figure which should be used for calculating the height to which coal and other minerals should be loaded according to their specific gravity. More outdoor supervision both by the colliery and the railway staffs is advocated whilst it is suggested that monthly meetings on the coalfields between the railway and colliery representatives should be revived. A recommendation to which the Committee attach special importance is that open wagons should be supplied to all collieries which in tal mechanical appliances for loading coal in order to ensure the loading of coal in the best possible condition with the minimum of slack and dust. They also recommend that the control of wagon supplies which was instituted in 1917 when a Coal Controller was appointed who was replaced in April 1919 by a Coal Transportation Officer working under the Railway Board should be restored to the two railways themselves who should have a joint officer for the purpose. Preference in the matter of wagon supplies for coal should be restricted to coal required by railways inland river navigation companies and ocean going steamers under mail contracts with Government, to coal for works of public utility and to coal for export certified in accordance with the proposals made later in the Report.

Docks and Depots—In Chapter VII the Committee examine the working of the Calcutta Docks and coal depots. They conclude that whilst the turnaround of wagons at the docks could be improved the delays in shipping coal are mainly due to the irregular arrival of the wagons intended for a particular steamer. If

the facilities for the movement of coal traffic in the docks were improved to the extent contemplated by the Port Commissioners they would prove sufficient to deal adequately with an extension of the existing coal traffic which can be regarded as probable in the near future. The Port has at present two mechanical loading appliances known as Beckett's plant and the Committee consider that in order to avoid breakage, whenever shippers ask that their coal should be loaded by this plant every effort should be made to comply with their request and that, save in exceptional circumstances the first part of each cargo of coal should always be loaded by this plant which could deal with four million tons of coal annually even if only one of the two plants were reserved for coal. The Beckett's plant is however only a semi-mechanical plant and the Committee recommend that the question of the most suitable type of mechanical loading appliance for Calcutta should be investigated at an early date by a small expert committee which should report on the best type of mechanical loading appliance adapted to all types of wagon and should also investigate the possibility of using shoots for coal loaded by hand into steamers. A review of the charges levied by the Port Commissioners on coal leads to the conclusion that the financial condition of the Port is not such as to justify a reduction of the charges on coal and that no statistical case can be made out for such a reduction. On much the same general grounds as for the railways the Committee however recommend a reduction and suggest that this should take the form of a reduction of four annas on the river dues on certified export coal. They do not recommend any alteration in the charges on coal at the bunker depots and their only recommendation of importance in this connexion is that the possibility of extending the pontoons and gangways at the Howrah depot into deeper water with a corresponding extension of the railway sidings should be considered.

Freights—In examination of the steamer freights on coal exported from Calcutta leads to the conclusion in Chapter VIII that the present freights for coal cannot be considered economical in view of the increase cost of working. The Committee explain why Calcutta does not attract tramp steamers which means that freight on coal has always to be paid for at the economic level. They emphasize that freights from Calcutta are fixed on the basis of the demand for tonnage and of the available supply at ports all over the world and cannot therefore be controlled by Government action. They consider that there is no prospect of any reduction in the freight on coal from Calcutta in the near future.

Grading and Certification—Chapter IX in which the Committee discuss the steps which should be taken to restore the confidence of purchasers overseas in Indian coal is the most important in the Report. They emphasize the necessity that any system of grading and certification should be such as to command the confidence of buyers but should not relieve the exporter of any responsibility as to quality. They point out that it would take too long and would be too expensive to establish a new organisation immediately for the grading of Indian coal and therefore recommend that the organisation

of the Chief Mining Engineer to the Railway Board who represents the largest purchasers of coal in India should be utilised for the purpose. It would work in conjunction with a Grading Board of which the Chief Mining Engineer would be Chairman and which would also include a representative of the Indian Mining Association and one of the Indian Mining Federation and also nominees of the Bengal Chamber of Commerce and the Bengal National Chamber of Commerce the two latter representing the interests of consumers on the Board.

A general outline of a scheme for classifying all Indian coals is given and it is suggested that a grading list should be published by the Board as soon as possible after its constitution. In this list the different collieries and seams would be classified in accordance with the scheme and an analysis of the coal they produce would be given but no colliery would be included in the list without its consent. The Committee hold strongly that only those collieries included in the grading list should be eligible for the special concessions from the railways and the Port Commissions recommended in previous chapters and that only certified coal from such collieries should receive these concessions. They consider that the decision of the Grading Board as to the classification of any colliery or seam should be final. They formulate a scheme for the inspection of certified coal and suggest a form of certificate. They recommend that the cost of any analysis required should be borne by the colliery concerned and that the cost of inspection should be met by the levy of a fee of one anna per ton of coal inspected. They finally urge under this head that as the services of the Chief Mining Engineer and his staff are not likely to be available for more than two years a scheme should be introduced by the end of that period for the inspection of export coal by independent officers appointed by the Grading Board. The advantages and disadvantages of selling coal on analysis are examined and it is recommended that exporters of coal to Bombay should be prepared to submit their coal to analysis when selling to consumers who have adopted the system of purchase on calories. They do not consider the certification of bunker coal practicable.

In Chapter V the Committee briefly examine the possibility of pooling coal for export and pronounce it not feasible.

Chapter XI contains a few miscellaneous recommendations such as the necessity for propaganda by exporters of Indian coal the

quotation of prices of Indian coal in sterling the adoption of the system of payment on delivery and of payment of freight on the quantity shown in the bill of lading less an allowance of two per cent in lieu of weightment when competing coals is sold on three terms, improvements in the coal statistics issued by the Director General of Commercial Intelligence and the advisability of obtaining the advice of the Chief Mining Engineer before any large contract for coal is placed either by the Imperial Government or by any Local Government.

Mr Banerjee appended a minute of dissent to the Report in which he laid the present position of the Indian coal trade at the door of the embargo which he attributed entirely to Government action demanded more railway sidings in the coalfields considered that the present rebate on coal should be doubled proposed special rates for coal sent to certain upcountry stations recommended the grant of lower railway rates in the off season when wagons are not required for the movement of grain urged the abolition of the present system of prepayment of freight on coal and also the complete abolition of the Coal Transportation Officer considered that there should be no nominees of the Bengal Chamber of Commerce or of the Bengal National Chamber of Commerce on the Grading Board dissented from the proposal to publish the grading list and finally argued that the Indian coal trade was in need of a much larger measure of direct assistance than had been recommended by his colleagues.

The recommendations of the Committee were accepted practically in their entirety by the Government of India and the coal trade and a Grading Board, in accordance with the scheme formulated by the Committee, was established by the Coal Grading Board Act, (X XXI) of 1925, which was passed at the September session of the Legislature. The recommendations of the Committee in regard to the grant of an enhanced rebate and of lower river dues were accepted by the railways and the Calcutta Port Commissioners respectively and provision was made in the Act for the grant of rebates and of preference in the matter of wagon supply so far as this required legalisation. Draft rules under the Act were published for criticism in October 1925. The question of protecting Indian coal against imports of foreign coal was referred to the Tariff Board in that month. The Board had not completed its investigations at the end of the year.

IRON ORE

Bengal and Bihar and Orissa are the only provinces in India in which iron ore is mined for smelting by European methods. Iron smelting however was at one time a widespread industry in India and there is hardly a district away from the great alluvial tracts of the Indus, Ganges and Brahmaputra in which slag heaps are not found. The primitive iron smelter finds no difficulty in obtaining sufficient supplies of ore from deposit that no European ironmaster would regard as worth his serious consideration. Early attempts to introduce European processes

for the manufacture of pig iron and steel were recorded in 1830 in the South Arcot District. Since that date various other attempts have been made but none proved a success before that now in operation near Barakar in Bengal. The site of the Barakar Iron Works was originally chosen on account of the proximity of both coal and ore supplies. The outcrop of iron stone shales between the coal bearing Barakar and Ranigall stages stretches east and west from the works and for many years the day ironstone nodules obtainable from this form-

ation formed the only supply of ore used in the blast furnaces. Recently magnetite and hematite have been obtained from the Manbhum and Singhbhum districts, and the production from the last-named district has largely replaced the supplies of ore hitherto obtained near the iron works. The Bengal Iron and Steel Company Limited have now given up the use of ores obtained from the neighbourhood of Barakar and Raniganj and are now obtaining most of their ores from the Kolhan Estate, Singhbhum. Some years ago the Bengal Iron Steel Co. Ltd. secured two deposits of iron ore in Baranda (Singhbhum) forming parts of two large hill masses known as Noda Buru and Buda Buru respectively. Recent prospecting in this part of Singhbhum has led to the discovery of numerous additional deposits of iron ore, the extension of which has been traced into Keonjhar and Bonal States in Orissa, a total distance of some 40 miles in a S. S. W. direction. At Panstra Buru, a portion of Noda Buru, the deposit has been opened up, and now feeds the Barakar Ironworks. Panstra Buru rises to over 2,500 feet above sea level, the low ground on the west side being at

about 1,100 feet above sea-level. The uppermost 400 to 450 feet of this hill has now been opened up, and the workings indicate the existence of a deposit about a quarter of a mile long perhaps 450 feet thick and proved on the dip for about 500 feet. The ore body appears to be interbedded with the Dharwar slates, from which it is separated by banded hematite-jaspers. The ore itself is high grade micaceous hematite often lateritised at the outcrop. Cross-cut into the interior of the deposit show that the hematite becomes very friable not far below the outcrop. In fact the characteristics of this ore including the surface lateritisation are almost exactly reproduced in the iron-ore deposits of Goa and Ratnagiri. The Tata Iron and Steel Company at Sakchi possesses slightly richer and purer ore bodies in the Raipur district supplies of ore are at present drawn from the deposits in Mayurbhanj. The ore-deposits have all been found to take the form of roughly lenticular lead- or bodies of hematite with small proportions of magnetite in close association with granite on the one hand and granu- lile rocks on the other.

Quantity and value of iron-ore produced in India during the years 1925 and 1926

(a) Estimated.

(b) Excludes 1,809 tons of hematite quartzite

The production of iron ore in India has been steadily on the increase. In 1926 there was an increase over the previous year of 7.4 per cent. amounting to 114,148 tons. The figure shown against the Mayurbhanj State represents the

production by the Tata Iron and Steel Company Ltd. whilst of that recorded against Singhbhum 185,008 tons were produced by the Indian Iron and Steel Company Ltd. from their mines at Goa, 22,261 tons by the Pongal

Iron Company Ltd. from their Pansara Ajite and Madellan Mines and 156 42, tons by the Tata Iron and Steel Company Ltd. from their Noamundi Mine the remaining 325 tons were produced by two other firms.

There was a further increase in the production of pig iron in India from 840 075 tons in 1925 to 902,433 tons in 1926 but the quantity

exported fell from 341 989 tons in 1925 to 300 703 tons in 1926. Japan was the principal consumer of Indian pig iron in 1925-27 more than 75 per cent of the total exports going to that country. There was a very slight fall in the export value which was Rs. 45 9 (L.S. 45) per ton in 1925 and Rs. 45 1 (L.S. 37) per ton in the following year.

MANGANESE ORE

This industry commenced some thirty years ago by quarrying the deposits of the Visagapatam district, and from an output of 874 tons in 1892, the production rose rapidly to 92,008 tons in 1900 when the richer deposits in the Central Provinces were also attacked and are now yielding a larger quantity of ore than the Visagapatam mines. India now alternates with Russia as the first manganese-producing country in the world. The most important deposits occur in the Central Provinces, Madras, Central India and Mysore—the largest supply coming from the Central Provinces. The uses to which the ore is put are somewhat varied. The peroxide is used by glass manufacturers to destroy the green colour in glass making, and it is also used in porcelain painting and glazing for the brown colour which it yields. The ore is now used in the manufacture of ferro-manganese for use in steel manufacture. Since 1904, when the total output was 150 190 tons the progress of the industry has been remarkable owing to the high prices prevailing. In 1905 production reached 247,487 tons, the following year, it

was more than doubled (571 495 tons), and in 1907 the figures again rose to 902,291 tons. In 1909 on account of the fall in prices the output contracted to 642,675 tons but it almost regained its former position in 1910 when the production rose to 800 907 tons. In 1911 it fell to 670,290 tons. In 1916 the output was 845 204 tons valued f o b at Indian Ports at £1 487 026. The ore raised in the Central Provinces is of a very high grade, ranging from 50 to 54 per cent. of the metal, and in consequence of its high quality is able to pay the heavy tax of freight over 500 miles of railway besides the shipment charges to Europe and America.

Record Output in 1926.—A rise in the output of manganese ore in India is again to be recorded the total for 1925 839 481 tons valued at £ 617 200 f o b Indian ports, rising to 1 014 908 tons valued at £ 590 357 f o b Indian ports during 1926. The figure for output is the highest yet recorded and exceeds that for 1907 when 902,291 tons were raised. Concurrent with a rise in output there was, as in the previous year a fall in value, the total value for 1923 being 226,863 less than that for 1925.

This was again due to a fall in price. In 1924 first grade ore of United Kingdom ports fetched an average price of £ 94 per unit. In 1925 this price fell to £ 71 and in 1926 to £ 57.

A fall in price was anticipated in view of the agreement two or three years ago between an American group of financiers and the Soviet Government for the development of modern lines of the manganese ore of the Caucasus. The political or economic reason not yet fully understood no development has yet been carried out and the price has fallen. In addition to the four chief manganese producing areas, India, Brazil, the Gold Coast and Cuba, a fourth source at Loshadburg in the northern part of the Cape Province is promising the quality which and the deposits extensive the only drawback being the presence of aluminium compounds.

Exports—The exports of manganese ore which during 1924 fell to the extent of about 100,000 tons decreased in 1925 by about 20,000 tons and again in 1926 by 32,000 tons. There is a steady continuation of manganese ore at the works of the three principal Indian iron and steel companies not only for use in the hot furnaces of the Tata Iron and Steel Company and the manufacture of ferro-manganese but also for addition to the blast-furnace charge in the manufacture of pig iron. The consumption of

manganese ore in the industry was 40,111 tons or 288 tons more than it was in the previous year.

GOLD

The greater part of the total output of gold in India is derived from the Kolar gold field in Mysore. During the last decade the production of this mine reached its highest point in 1905 when 615,758 ounces were raised. In 1906 the quantity won was 585,208 ounces and this figure fell to 555,085 ounces in 1907. The figures for the latter years reveal a small improvement. The Nizam's mine at Hutti in Hyderabad comes next, but at a respectable distance, to the Kolar gold field. This mine was opened in 1908. The only other mines from which gold was raised were those in the Dharwar district of Bombay and the Anantapur district of Madras. The Dharwar mines gave an output of 2,993 ounces in 1911 but work there ceased in 1912. The Anantapur mines gave their first output of gold during the year 1910 the amount being 2,532 ounces valued at Rs 1,51,800. Gold mining was carried on in the North Arcot district of Madras from 1893 till 1900, the highest yield (2,844 ounces) being obtained in the year 1898. The Kyaukpazat mine in Upper Burma was worked until 1903 when the pay chute was lost and the mine closed down. In 1902 dredging operations were started on the Irrawaddy river near Myitkyina, and 216 ounces of gold were obtained in 1904 the amount steadily increased from year to year and reached 8,445 ounces in 1909 but fell in subsequent years until in 1922 it was no more than 24 oz. The small quantity of gold produced in the Punjab Central Provinces, and the United Provinces is

obtained by washing. Gold washing is carried on in a great many districts in India but there is no complete record of the amount obtained in this way. The average earnings of the workers are very small and the gold thus won is used locally for making jewellery.

The continuous decrease in the output of gold in India from the maximum production of 615,728 ozs reached in 1915 continued during the year 1928 when the total output of gold was 383,697 85 ozs valued at £1,702,612 rising in 1924 to 390,951 103 ozs valued at £1,427,433. The recovery made by the gold mines in the Anantapur district of Madras in 1924 was a temporary one only for both the North Anantapur Gold Mines Ltd. and the Jubbal Gold Mines Ltd. have now suspended mining operations. The small output shown against Madras represents the amount recovered by cyanide treatment of mill tailings which have now been exhausted. In spite of an increase of 935 ozs from the Kolar mines of Mysore therefore there was a total decrease in the Indian output amounting to 2,478 ozs. In the Gorseam mine of the Kolar field which has reached a depth of 8,391 feet rock bursts continue to give trouble, but recent development work has proved the rich nature of the lower levels of the mine down to the deepest point yet explored. An increase in the ore reserves of the Champion Reef mine has also been established this mine which has now reached a depth of 6,472 feet also suffers from rock bursts.

(a) The gold

PETROLEUM.

Petroleum is found in India in two distinct areas—one on the east which includes Assam, Burma, and the islands off the Arakan coast. This belt extends to the productive oil fields of Sumatra, Java and Borneo. The other area is on the west, and includes the Punjab and Baluchistan, the same belt of oil bearing rocks being continued beyond the borders of British India to Persia. Of these two the eastern area is by far the most important, and the most successful oil fields are found in the Irrawaddy valley. Yenangyaung is the oldest and most developed of these fields. Native wells have been at work here for over 100 years, and in 1886 prior to the annexation of Upper Burma the output is estimated to have averaged over 2 million gallons a year. Drilling was begun in 1887. The Yenangyaung field yielded a very small supply of petroleum before 1891 in which year drilling was started by the Burma Oil Company. Since now holds the second place among the oil fields of India. Petroleum was struck at the end of 1901 and in 1903 5 million gallons were obtained. In 1907 and 1908 the production of this field was 43 million gallons and after a fall to 31½ million gallons in 1910 it rose to 56½ million gallons in 1912. Several of the islands off the Arakan coast are known to contain oil deposits but their value is uncertain. About 20 000 gallons were obtained from the eastern Barango Island near Akyab, and about 37 000 gallons from Ramri Island in the Kyaukpadaung district during 1911. Oil was struck at Minbu in 1910 the production for that year being 18,320 gallons which increased to nearly 4 million gallons in 1912. The existence of oil in Assam has been known for many years and an oil spring was struck near Makura in 1867. Nothing more, however, was done until 1883 and from that year up till 1902 progress was slow. Since that year the annual production has been between 2½ and 4 million gallons.

On the west oil springs have been known for many years to exist in the Rawalpindi and other districts in the Punjab. In Baluchistan geological conditions are adverse, and though some small oil springs have been discovered attempts to develop them have not hitherto been successful.

Output in 1926.—Petroleum statistics prove that it is becoming more and more difficult to maintain the output of India (including Burma) at the high levels it reached in 1919 and 1921 when peak productions of well over 30½ million gallons were reached. During the year under consideration the total production amounted to less than 280½ million gallons against a little over 284 million gallons in 1925. There is no little doubt that this repeated diet small as it is form part of the evidence that the inevitable decline has set in and with possible interruptions is likely to continue slowly and steadily during the present generation, unless a new field of importance is discovered. The chances of the latter event year by year as exhaustive geological research continues to prove fruitless. A conservative policy rather than one of intensive development seems indicated especially in view of the national importance of this mineral asset. The value figure dropped slightly more than the production figure.

As before the Yenangyaung field of Upper Burma is mainly responsible for the present decrease in output. In 1924 it succeeded in showing an increase of nearly 8½ million gallons but this temporary arrest in the decline was more than balanced by the drop in 1925 of over 1½ million gallons. In 1926 the drop amounted to over 14½ million gallons. The decline in 1926 is partly attributable to a strike which took place during the first quarter of the year and also it is thought to heavy late rain several wells were put out of action by land

house and the Angban to bridge was overthrown.

In Assam prospects are a little brighter. In Badarpur field which had proved to be somewhat below expectations decreased its output by over 1 million gallons further. But in Lower Assam have raised hopes of extension in development. The Ingboi field in Upper Assam again showed a marked increase amounting to nearly ½ million gallons. Several geological investigations by the Assam Oil Company's staff aroused expectations of a

successful expansion of this field and an extension of the refinery is contemplated. So far negative results only have rewarded the company's rather tests at Dhekrauli Dill and Luraipolai.

In the Punjab there is less cause for satisfaction. Its output from the Bahaur field has again dropped far below the extent of over 1,800,000 gallons. A boring put down by the Whitehall Petroleum Corporation near Multa and 6 miles south west of Lahore, reached the great depth of 6,000 feet without unfortunately striking oil in remunerative quantity.

Amber Graphite and Mica—Amber is found in very small quantities in Burma, the output for 1926 being 30 cwts. valued at Rs. 21,420. Graphite is found in small quantities in various places, but little progress has been made in mining except in Travancore. The total output in 1921 was 20 tons. India has for many years been the leading producer of mica, turning out more than half of the world's supply. In 1914, owing to the war, the output was only 38,189 cwts. compared with 43,640 cwts. in 1913. Owing to necessary restrictions with regard to the export of mica, the output fell off considerably in the year 1915, but subsequent demand in the United Kingdom for the best grade of ruby mica led to a considerable increase in production during the following years.

There was a decrease in the declared production of mica from 40,000 cwt. valued at Rs. 1,09,716 (£16,350) in 1921 to 41,924 cwt. valued at Rs. 1,19,307 (£16,644) in 1926. But the output figures are incomplete and a more accurate idea of the size of the industry is to be obtained from the export figures. In both the years 1925 and 1926 the quantity exported was more than double the reported production.

Tin, Copper, Silver and Lead—The only persistent attempt to mine tin is in Burma. The output was for some time insignificant but rose in 1918 to 116 tons valued at £46,000 which fell to 438,000 in 1914. In 1925 Burma yielded 2,308 tons. Copper is found in Southern India, in Rajputana, and at various places along the outer Himalayas, but the ore is

Smelted for the metal alone, no attempt being made to utilize the by products. In 1924 the production of 2,635 tons of copper matte valued at Rs. 16,94,527 was reported by the Burma Corporation Ltd. in the North Shan States. There was a considerable increase in the production of tin-ore in Burma from 2,308 tons valued at Rs. 3,61,441 (Rs. 3,911) in 1925 to 3,548 tons valued at Rs. 6,101,838 (Rs. 5,702) in 1926. The Mergol and Tavoy districts contributed to some extent to this increase but most of it was due to production of 1,700 tons of mixed cassiterite wolfram concentrates from the Mawlaik Mines in the Southern Shan State. The composition of these concentrates is usually 43 per cent. wolfram to 57 per cent. cassiterite. The only lead mine of any importance being worked in the Indian Empire is that of Lawbwin where a very large body of high grade lead silver-ore has now been blocked out. For many years the smelting operations of the company were directed to recovering lead and silver from the slag left by the old Chinese miners. These slags however are now practically exhausted and the mine has reached a stage of development at which a steady output is assured. The total amount of metal extracted increased from 41,275 tons of lead including 1,100 tons of antimonial lead valued at Rs. 1,107,128 (Rs. 66,190) in 1925 to 54,310 tons of lead including 1,675 tons of antimonial lead valued at Rs. 1,245,634 (Rs. 1,686,167) in 1926.

The production of silver from the Bawlaik mines of Upper Burma which had risen to 1 to 5,287,111 oz. valued at Rs. 11,25,408 (Rs. 684) in 1924 and fallen to 4,931,548 oz. valued at Rs. 98,36,580 (Rs. 1,09,995) in 1925 recovered to 5,10,646 oz. valued at Rs. 88,49,22 (Rs. 680,42) in 1926.

Zinc.—A monograph on zinc ores issued by the Imperial Institute in 1917 says that during the past fifty years zinc ores have received but little attention in India and no production was recorded until 1918. In 1914 the production was 3,555 tons and although the output fell to 98 tons in 1915 there is a prospect of India becoming an important producer of zinc ore in the future. Important silver lead zinc deposits occur at Bawlaik in Lawnping State one of the Northern Shan States in Upper Burma. The mines are connected with the Mandalay Lashio Branch of the Burma railways by a narrow gauge line 21 miles long the line meeting at Manpaw which is about 544 miles from Bawlaik. They were worked for many centuries by the Chinese for silver and have long been known to contain zinc ore. Until recently, however, no serious attempt appears to have been made to market the ore for its zinc values. In 1907 the present undertaking was started by the Burma Mines Ltd. with the idea of recovering the lead from the old slag heaps left by the Chinese estimated at 125,000 to 160,000 tons, and later to work the deposit. Smelting operations on these slags were first carried out at Mandalay but later the works were transferred to Nantun about 13 miles below the mines on the narrow-gauge railway. The deposits which comprise an area of about 2,500 acres, have now been taken over by the Burma Corporation Ltd. and its production of zinc concentrates in 1926 amounted to 48,834 tons or almost three times the amount produced in

1925. The exports during 1926 amounted to 44,066 tons valued at Rs. 43,01,775 (Rs. 1,177) against 20,967 tons valued at Rs. 2,079,794 (Rs. 156,951) in the preceding year.

Gem Stones.—The only precious and semi-precious stones at present mined in India are the diamond ruby sapphires spinel, tourmaline, garnet, rock-crystal, agate, corundum, jadeite and amber. Amber has already been referred to, of the rest only the ruby sapphires and jadeite attain any considerable value in production and the export of the latter has declined owing to the disturbance in China which is the chief purchaser of Burmese jadeite. The output of diamonds is comparatively unimportant. The output of the ruby mines in 1924 was only 101,047 carats or less than half the average annual quantity produced during the two preceding quinquennial periods. In 1929 an exceptionally valuable ruby of nearly 23 carats was found of rare size and quality. A severe decline in the output from the Mogoke mines of Upper Burma in 1924 followed in 1925 a marked drop in value bore witness to a serious decline in the industry. The Burma Ruby Mines Limited ultimately decided to accept liquidation and the mines were offered for sale in September 1927. The skeleton organisation left in charge of the mines has, however, made good use of its opportunities, with the result that the value of the output in 1926 (Rs. 4,66,772) exceeded that of the previous year by over a half of rupees. The economy in result was effected by rigorous economy and an extension of a system of co-operation with local miners and was assisted by some good finds of sapphires in the Kyaukse mine (the only one still worked by European methods).

Wolfram.—Owing to the continued depression in the wolfram market Tungsten ore is now nowhere extracted except in the Lavo district, where it occurs chiefly as a constituent of mixed concentrates. For the reason stated under Tin the output of wolfram in 1926 was almost equal to the amount produced in 1925. The quantity exported from India amounted to 1,062 tons valued at Rs. 21,64,222 (Rs. 1,01,099) in 1925 against 1,416 tons valued at Rs. 18,49,455 (Rs. 1,27,027) in the previous year. The increase of export over production is probably due to the accumulation of stocks in the years previous to 1922.

Radio active Minerals.—The General Report of the Director of the Geological Survey of India for 1918 includes a brief report by R. O. Burton on an occurrence of pitchblende at mica mines near Singar Gaya district, Bengal. The pitchblende occurs as rounded nodules in a pegmatite that is intrusive in mica schists. Other minerals occurring in the pegmatite are mica, tripelite, leucosite, tourmaline, and uranium ochre, whitish columbite, zircon and torbernite have also been recorded. Of these minerals tripelite is stated to be the commonest.

The importance of the find of uranium oxide in impregnating the tripelite led to the discovery of weathered pitchblende, and as the pits were deepened the weathering became less and less until pure pitchblende was obtained. In the six months from July 1918 to February 1914, eight hundred weight of pitchblende was obtained

from Atrakhi Hill together with six tons of uranium earth debris five to six hundred tons of tripelite and two tons of tantalite. These ores were raised under a prospecting license in respect of Atrakhi Hill alone and in March 1914 mining leases for thirty years was obtained in respect of sixty square miles of the Singar estate. The first intention was to work only the five square miles round Atrakhi and a syndicate was formed for this purpose which on the outbreak of war was refused a Trading License on account of the German element in it.

Labour in Mines

The question of the labour supply presents difficulties which are not encountered in countries where mining is a special calling. The majority of the persons working at the Indian coal mines are agriculturists and the supply of labour, as experience has recently shown depends to a material extent on the condition of the agricultural industry. The major portion of those employed says a report by the Department of Statistics are the aboriginal Dravidians from the mountainous country of Chota Nagpur and the Central Provinces but a large number of other castes are also employed, particularly in the outlying fields. The majority of the workmen follow the vocation of agriculture as well as mining and return to their homes during the period of sowing and reaping the result being that at such times the output of many of the mines is greatly

restricted. At the Makum collieries of the Assam Railway and Trading Company where the labour question continues to be a very difficult one, nearly a third of the total labour force are Mekrans, Chinese and Nepaleses. The Chinese have however proved unsatisfactory and it is unlikely that they will in future be recruited. With the increase in the depth of working the need for a skilled mining class will become accentuated, and if the price of coal remains at a sufficiently high level, further development in the introduction of coal-cutting plants may take place. During the period of high prices some nine years ago cutting plants were introduced in order to augment the output. These worked successfully but the cost proved to be high and as labour conditions improved the machines were discarded.

During the year 1926 the daily average number of persons working in and about the mines regulated by the Indian Mines Act was 260 118 as compared with 258 772 in the previous year. This is an increase of 6 256 persons or 2 46 per cent. Of these persons 118 232 worked underground 71 139 in open workings and 70 742 on the surface.

The number of persons employed in coal mines was 170 624 which is 512 less than the number employed in 1925. Of these persons 41 770 were coal cutters, 9 378 were malt loaders and 50 607 were females—chiefly loaders.

Average number of persons employed daily in the Indian Coalfields during the Year 1925 and 1926—

	Number of persons employed daily		Output per person employed in tons	Number of deaths by accident	Death rate per 1 000 persons employed.
	1925	1926			
Assam	4 199	4 123	96 6	10	8.5
Baluchistan	961	234	117 2		
Bengal	42 781	43 484	118 1	0	1.2
Bihar and Orissa	114 934	111 940	138 0	90	0.9

by R. H. Pascoe Director, Geological Survey of India. Note on the Mineral Production of Burma in 1922. Monographs on Mineral Resources published by the Imperial Institute.

Stock Exchanges

There are about 440 Share and Stock Broker in Bombay. They carry on business in the Brokers Hall, bought in 1899 from the funds of the Share and Stock Brokers Association formed to facilitate the negotiations and the sale and purchase of Joint Stock securities promoted throughout the Presidency of Bombay. Their powers are defined by rules and regulations framed by the Board of Directors and approved by the general body of Brokers. The Board has the power to fix the rates in times of emergencies. The official address of the Secretary is Dalal Street, Fort Bombay.

At first the admittance fee for a broker was Rs. 5 which was gradually raised to Rs. 7,000. The fee for the Broker's card has increased and it was recently sold by public auction for Rs. 21,800. In 1921 a number of cards were sold at Rs. 40,000 each and the proceeds were employed to purchase an adjoining building for the extension of the business. This building was pulled down and the extension was completed last year. The present value of the card is about Rs. 7,000. The rules of the Association were revised in October 1916 and from the New Year the purchaser of shares has to pay the stamp and transfer fee instead of the seller. There are two classes of Exchange Brokers, Europeans and Indians, the latter being certified for recognition by the native Stock Exchange, Business in Government Paper and all other Trustees' Authorities Securities is carried on under the rules of the Bombay Stock Exchange, but in the street outside the hall.

In November 1917 a second Stock Exchange was opened in Bombay with its headquarters in Apollo Street, known as the Bombay Stock Exchange, Ltd. This separate Exchange no longer functions older body. It was revived in 1922. It has ceased to function again.

Committee of Enquiry—In 1923 the Government of Bombay appointed a Committee to enquire into the constitution, government, customs, practices, rules, regulations and methods of business of the Native Share and Stock Brokers Association of Bombay and to investigate any such complaints of the public and to make any such enquiries with reference to any of the aforesaid matters or any other matter appertaining to the aforesaid Association as the Committee may deem proper and thereafter with a view to protect the investing public against the interested or irregular control of business to formulate such definite proposals for the future constitution, control, direction and regulation of the aforesaid Association as the Committee may deem proper.

The Committee issued a report early in 1924 signed by all the members save one who appended a minority report. The majority report made several important recommendations for reform, notably one aimed at the prevention of corners and another for facilitating the handling of legitimate complaints against the brokers on the part of the public. The Association, however, adopted the minority report which leaves the constitution and practices of the Exchange very little modified.

In the middle of the year 1925 there was heavy speculation in certain mill scrips. The market

was tremendously oversold the usual crisis, ensued, leading to the temporary closing of the Exchange and the suspension of all dealings and a public agitation for thorough reforms arose. The brokers were at first unwilling to yield to this demand. But a threat of Government intervention and control altered their attitude. In the end they submitted new draft rules under which wild speculation will be discouraged and the recurrence of such crisis as that indicated above will be unlikely.

For many years the Calcutta Share Market had its meeting place in various gullies in the business quarter and was under no control except that of established market custom. In 1908 the Calcutta Stock Exchange Association was formed, a building was leased in New China Bazar Street now called Royal Exchange Place a representative committee was formed, and the existing trade customs were focussed into rules drawn up for the conduct of business. Admittance as a member of the Stock Exchange is by vote of the committee and the entrance fee is at present Rs. 500. The market custom differs very materially from that of most other Stock Exchanges since there are no settlement days delivery is due the second day after the contract is passed and sales of securities are effected for the most part under blank transfers. Another difference in procedure as compared with the London Stock Exchange is that there are no Jobbers in the Calcutta market. The Dealers who take their place, more or less, are not compelled to quote a buyer's and a seller's rate and are themselves Brokers as well as dealers, calling upon the Banks and other clients and competing with Brokers.

There are about 150 members besides outside brokers, the former consisting of European, Jewish, Marwari and Bengalee firms. The Marwaris predominate. The volume of bona fide investment business is comparatively small and insufficient for the number of Brokers. The principal business transacted on the Calcutta Stock Exchange is connected with the shares in Jute Mills Coal Companies, Tea Companies registered in India, Miscellaneous Industrial concerns (such as Paper Flour Sugar) Railway and Transit Companies and Debentures, the latter comprising those of Industrial concerns and Trustees, Investment Securities, namely, Municipal and Port Trust Debentures. The association has an honorary secretary and is not at present affiliated to the Bengal Chamber of Commerce.

The Madras Stock Exchange situated at No. 9 Broadway (in Tata Industrial Bank Buildings) consists of about 100 Members of which 25 are working Members. It was opened on 6th April 1920 and deals principally in Mill shares. Business is regulated by rules drawn up by the Directors. There is a Board of arbitration. There is an admittance membership cost of Rs. 1,000 and an annual subscription of Rs. 100. The original 100 members were elected by the first Directors and each of the working members have deposited a security of Rs. 5,000.

Chambers of Commerce.

Modern commerce in India was built up by merchants from the west and was for a long time entirely in their hands. Chambers of Commerce and numerous kindred Associations were formed by them for its protection and assistance. But Indians have in recent years taken a large and growing part in this commercial life. The extent of their participation varies greatly in different parts of India according to the natural prodivities and genius of different races. Bombay for instance has led the way in the industrial and commercial regeneration of the new India, while Bengal very active in other fields of activity lags behind in this one. Arising from these circumstances we find Chambers of Commerce in Bombay, Karachi, Calcutta, Madras and other important centres with a membership both European and Indian, but alongside these have sprung up in recent years certain Associations such as the Bombay Indian Merchants Chamber and Bureau, of which the membership is exclusively Indian. These different classes of bodies are in no sense hostile to one another and constantly work in association.

The London Chamber of Commerce in 1921 realising the increasing attention demanded by the economic development of India took steps to form an East India Section of their organization. The Indian Chambers work harmoniously with this body but are in no sense affiliated to it nor is there at present any inclination or their part to enter into such close relationship because it is generally felt that the Indian Chambers can themselves achieve their objects better and more effectively than a London body could do for them and on various occasions the London Chamber of the East India Section of it have shown themselves out of touch with what seemed locally to be immediate requirements in particular matters.

A new movement was started in 1913 by the Hon. Sir Fazulbhoy Currimbhoy Ibrahim, a leading millowner and public citizen of Bombay which aims at effecting great improvement in strengthening Indian commercial organisation. Sir Fazulbhoy's original plan was for the formation of an Indian Commercial Congress. The proposal met with approval in all parts of India. The scheme was delayed by the outbreak of war but afterwards received an impetus from the same cause and the first Congress was held in the 1915 Christmas holiday season in the Town Hall, Bombay. The list of members of the Reception Committee showed that all the important commercial associations of Bombay were prepared to co-operate actively.

The Congress was attended by several hundred delegates from all parts of India. Mr. (now the Hon. Sir) D. B. Wacha, President of the Bombay Indian Merchants Chamber presided as Chairman of the Reception Committee at the opening of the proceedings and the first business was the election of Sir Fazulbhoy Currimbhoy as the first President. The Congress resolved upon the establishment of an Associated Indian Chamber of Commerce, and elected a Provincial Committee empowered to

take the necessary steps to get the Association registered and to enrol members and carry on work. The Congress also approved of the draft constitution.

The following are the principal paragraphs of a Memorandum of Association and Statement of Objects of the new Associated Chamber as approved by the Congress —

I. The name of the Chamber will be "THE ASSOCIATED INDIAN CHAMBER OF COMMERCE."

II. The Registered Office of the Chamber will be in Bombay.

III. The objects for which the Chamber is established are —

- (1) To discuss and consider questions concerning and affecting trade commerce, manufactures and the shipping interests at meeting of delegates from Indian Chambers of Commerce and Commercial Associations or Bodies and to collect and disseminate information from time to time on matters affecting the common interests of such Chambers or Associations or Bodies and the commercial, manufacturing and shipping interests of the country.
- (2) To attain those advantages by united action which each Chamber or Association or body may not be able to accomplish in its separate capacity.
- (3) To organize Chambers of Commerce, Commercial Associations or Bodies in different trade centres of the Country.
- (4) To convene when necessary the Indian Commercial Congress at such places and at such times as may be determined by a Resolution of the Chamber.

The Articles of Association provided: There shall be an annual meeting of the Associated Indian Chamber held at Bombay on a date to be fixed by the Executive Council in the month of February, or at some other time, and "semi-annual or special meetings" may be convened by the Executive Council or on the requisition of one-third of the total number of members addressed to the Secretary.

The organization languished for lack of support for some years until a number of merchants specially interested in Currency and Exchange questions revived it in 1926 at Delhi and 1927 at Calcutta. The initiative in the new activities hailing like the first movement from Bombay. The Commercial Congress held in Calcutta on 31st December 1926 and 1st and 2nd January 1927 decided upon the formation of a Federation of Indian Chambers of Commerce and agreed to the registered office of this body being at the place where the President for the year has his headquarters or where he directs it to be located. Among the objects for which the Federation is established are the following —

- (a) To promote Indian business in matters of inland and foreign trade, transport, industry and manufactures, finance and all other economic subjects.

- (b) To encourage friendly feeling and unanimity among business community and associations on all subjects connected with the common good of Indian business
- (c) To enter into any arrangement with any Government or authority supreme municipal local or otherwise that may seem conducive to the Federation's objects or any of them and to obtain from any such Government or authority all rights, concessions and privileges which the Federation may think it desirable to obtain and to carry out exercise and comply with any such arrangements, rights, privileges and concessions
- (d) To sell or dispose of the undertaking of the Federation or any part thereof for such consideration as the Federation may think fit and in particular for shares, debentures or securities of any other company having objects altogether or in part similar to those of this Federation
- (e) To take or otherwise acquire and hold shares in any other company having objects altogether or in part similar to those of this Federation.

- (f) To undertake and execute any trusts the undertaking of which may seem to the Federation desirable either gratuitously or otherwise
- (g) To draw make accept discount execute and issue bills of exchange promissory notes bills of lading warrants debentures and other negotiable or transferable instruments or securities

The Rules provide for two classes of members viz numbers consisting of Chambers of Commerce (Subscription Rs. 300) and others consisting of Commercial Associations (Subscription Rs. 150)

The following were elected a provisional Committee of the Federation —

President—Sir Dinshaw M. Petit

Members—Messrs G. D. Birla, Sir Purshottamdas Thakurdas, Vidyasagar Pandya, Jamal Mahomed Lala Harkishan Lal Adami, Haji Dawood Jambhed N. R. Mehta, Vikramjit Singh, Shri Ram W. C. Bannerjee, B. F. Madon, Kasturbhai Lalbhai, D. P. Khaitan and Rai Bahadur A. C. Bannerjee the last two being appointed Treasurers

The following are details of the principal Chambers of Commerce and kindred bodies in India at the present time —

BENGAL.

The Bengal Chamber of Commerce was founded in 1834. Its headquarters are in Calcutta. Other societies connected with the trade and commerce of the city are the Royal Exchange, the Bengal Bonded Warehouse Association, the Calcutta Trades Association, the Bengal National Chamber of Commerce and the Marwari Chamber of Commerce. The Bengal Chamber is registered with a declaration of membership of 300. Its objects are the usual purposes connected with the protection of trade, in particular in Calcutta. There are two classes of members: Permanent (Chamber and Associated) and Honorary.

Merchants, bankers, shipowners, representatives of commercial railway and insurance companies, brokers, persons and firms engaged in commerce, agriculture, mining or manufacture and joint stock companies or other corporations formed for any purpose or object connected with commerce, agriculture, mining or manufacture and persons engaged in or connected with art, science or literature may be elected as permanent members of the Chamber.

The following are the office bearers of the Chamber for the year 1927-28 —

President—Mr B. K. G. Liddis (Messrs Gillanders, Arbuthnot & Co.)

Vice-President—Mr J. A. Tassie (Messrs James Finlay & Co. Ltd.)

Committee—Mr H. B. Bateman (Messrs Shaw Wallace & Co.); The Hon. Sir John Bell (Messrs Mackinnon Mackenzie & Co.); Mr R. W. Backley (Chartered Bank of India, Australia and China); Mr H. C. Edmondson (Messrs Turner, Morrison & Co. Ltd.); Mr D. P. McKenzie (Messrs Duncan Bros. & Co. Ltd.); Mr N. Pierce (E. B. Ry.); Mr R. A. Fowler, (Messrs. McLeod & Co.)

The Secretary of the Chamber is Mr J. K. Thomson. Assistant Secretary, Mr A. C. Daniel.

The following are the public bodies (among others) to which the Chamber has the right of returning representatives and the representatives return for the current year are —

Council of State—The Hon. Sir John Bell

Bengal Legislative Council—Mr A. McD Liddis (Messrs Gladstone, White & Co. Ltd.); Mr J. F. Barton (Messrs Hoare, Miller & Co. Ltd.); Mr C. O. Morgan (Messrs Morgan, Walker & Co.); Mr J. Y. Philip (Messrs Macnelli & Co.); Mr A. Skinner (Messrs Jessop & Co. Ltd.) and Mr W. H. Thompson (Bengal Telephone Corp. Ltd.)

Calcutta Port Commission—The Hon. Mr J. W. A. Bell (Messrs Mackinnon Mackenzie & Co.); Mr H. C. Edmondson (Messrs Turner, Morrison & Co. Ltd.); Mr B. E. G. Edlis (Messrs Gillanders, Arbuthnot & Co.); Mr J. A. Tassie (Messrs James Finlay & Co. Ltd.); Mr R. B. Wilson (C. K. M. I. O. (Messrs Birkenhead Brothers) and Mr H. B. Whitby (Messrs Kilburn & Co.)

Calcutta Municipal Corporation—Mr W. R. C. Brierley (Messrs Shaw Wallace & Co.); Mr J. Campbell Forrester (M. L. O. (Smith Forrester & Co.); Mr R. O. Morgan (M. O. (Morgan Walker & Co.); Mr H. H. Neesling (Messrs Stearns & Co.); W. H. Thompson (The Bengal Telephone Corp. Ltd.); Mr D. C. Stewart Smith (Octavius Steel & Corp., Ltd.)

Bengal Boiler Commission—Messrs B. N. Nish (Pittsburg Jute Factory No 2) H. H. Reynolds (Andrew Yule & Co.) and A. Skinner (Jesop & Co. Ltd.)

Board of Trustees of the Indian Museum—Mr H. C. Edmondson (Turner Morrison & Co. Ltd.)

Bengal Smoke Nuisance Commission—Messrs A. V. Nicolai (Burn & Co. Ltd.) and G. Robertson (Union Jute Coy. & S. Mill)

Calcutta Improvement Trust—Mr Geo. Morgan M.C. (Morgan Walker & Co.)

The Chamber elects representatives to various other bodies of less importance such as the committee of the Calcutta Sailors' Home and to numerous subsidiary associations. The following are the recognised associations of the Bengal Chamber of Commerce—

Calcutta Wheat and Seed Trade Association
Indian Jute Mills Association
Indian Tea Association
Calcutta Tea Traders Association
Calcutta Fire Insurance Association
Calcutta Import Trade Association
Calcutta Marine Insurance Agents Association
The Wine, Spirit and Beer Association of India
Indian Mining Association
Calcutta Baled Jute Association
Indian Paper Makers Association
Indian Engineering Association
Calcutta Jute Fabrics Shippers Association
Calcutta Hydraulic Press Association
Jute Fabric Brokers Association
Baled Jute Shippers Association
Calcutta Jute Dealers Association
Calcutta Liners Conference
Calcutta Hide and Skin Shippers Association
Calcutta Sugar Importers Association
Indian Indigo Association
Indian Lac Association for Research and Calcutta Accident Insurance Association

The Chamber maintains a Tribunal of Arbitration for the determination, settlement and adjustment of disputes and differences relating to trade business manufactures and to customs of trade between parties all or any of whom reside or carry on business personally or by agent or otherwise in Calcutta or else where in India or Burmah by whomsoever of such parties the said disputes and differences be submitted. The Secretary of the Chamber acts as the Registrar of the Tribunal which consists of such members or assistants to members as may from time to time annually or otherwise be selected by the Registrar and willing to serve on the Tribunal. The Registrar from time to time makes a list of such members and assistants.

The Chamber also maintains a Licensor Measurers Department controlled by a special committee. It includes a Superintendent (Mr R. Ellis), Deputy Superintendent (Mr A. H. Lusk), Head Office Manager (Mr C. G. Smith) and four Assistant Superintendents (Messrs J. G. Smyth), A. H. Mathews, G. C. G. Smyth and E. H. Wootton and the staff at the time of the last official returns consisted of 112 officers. The usual system of work to the benefit of the trade of the port is followed. The Department has its own provident fund and compensation funds and Measurers' Club. The Chamber does not assist in the preparation of official statistical returns. It publishes weekly the *Calcutta Prices Current* and also publishes a large number of statistical circulars or various descriptions in addition to a monthly abstract of proceedings and many other circulars on matters under discussion.

INDIAN CHAMBER OF COMMERCE, CALCUTTA

The Indian Chamber of Commerce was established in November 1900 to promote and protect the trade commerce and industries of India and in particular the trade commerce and industries in or with which Indians are engaged or concerned to and to stimulate the development of trade commerce and industries in India with capital principally provided by or under the management of Indians, to watch over and protect the general commercial interests of India or any part thereof and the interests of persons in particular the Indians engaged in trade commerce or industries in India to adjust controversies between members of this Chamber to arbitrate in the settlement of disputes arising out of commercial transactions between parties willing or agreeing to abide by the judgment and decision of the Tribunal of the Chamber to promote and advance commercial and technical education and such study of different branches of Art and Science as may tend to develop trade commerce and industries in India to provide regulate and maintain a suitable building or room or suitable buildings or rooms for a Commercial Exchange in Calcutta and to do all such other things as may be conducive to the development of trade commerce and industries or incidental to attainment of the above objects or any of them.

There are two classes of Members—Local and Mofussil. The Local Members pay an annual subscription of Rs. 100 and the Mofussil members Rs. 50. Merchants, Bankers, Ship owners, representatives of commercial transport or insurance companies, brokers and persons engaged in commerce, agriculture, mining or manufactures and persons engaged in commerce with art, science or literature who are Indians shall be eligible for election as members of the Chamber.

The following constitute the Managing Committee of the Chamber for the year 1927—President, Mr G. D. Birla, Senior Vice President, Mr Anandji Haridas, Vice President, Rai A. C. Janjee, Ishadur, Members, Mr D. S. Prakash, Mr N. Rajbally, Mr K. T. Purohit, Mr E. P. Choudhary, Mr Rameshwar Lal, Noyani, Mr N. C. Sircar, Mr D. D. Thacker, Mr D. P. Chatterjee, Mr Habib Mahomed, Mr N. L. Puri, Mr P. Ganguli, Mr Mukundlal, Mr A. D. Adhikari, Mr A. L. Ojha, Mr C. S. Rana, swami, Mr M. P. Choudhary, M.A., F.R.S., F.R.S., Secretary.

The Indian Chamber of Commerce has recently appointed a Tribunal of Arbitration to arbitrate in all disputes relating to various trades with a view to cover the varying

nature of disputes arising in different trades separate panels of Arbitrators are appointed on the Tribunal of Arbitration for each of the following trades—(1) Jute (2) Gunny (3) Pilegoods and Yarn (4) Iron and Steel (5) Coal and Minerals (6) General

Chambers Representative on the Calcutta

Port Commissioners Mr D S Eulkar B.A. (Lautan) Bar-at-Law

Chambers Representative on the Bengal Nagpur Railway Advisory Committee—Mr Ananji Harida

Secretary—Mr M. P. Gandhi M.A. F.R.E.S.

BOMBAY

The object and duties of the Bombay Chamber as set forth in their Memorandum and Articles of Association are to encourage a friendly feeling and unanimity among commercial men on all subjects involving their common good to promote and protect the general mercantile interests of this Presidency to collect and classify information on all matters of general commercial interest to obtain the removal, as far as such a Society can of all acknowledged grievances affecting merchants as a body or mercantile interests in general to receive and decide references on matters of usage and custom in dispute, recording such decisions for future guidance and by this and such other means, as the Committee for the time being may think fit assisting to form a code of practice for simplifying and facilitating business to communicate with the public authorities with similar Associations in other places and with individuals on all subjects of general mercantile interests and to arbitrate between parties willing to refer to and abide by the judgment of the Chamber

The Bombay Chamber was established in 1836 under the auspices of Sir Robert Grant who was then Governor of the Presidency and the programme described above was embodied in their first set of rules. According to the latest returns the number of Chamber members is 154 and the number of Associated members is 4. Of these numbers 10 represent banking institutions 7 shipping agencies and companies, 3 firms of solicitors, 3 railway companies, 11 insurance companies, 16 engineers and contractors, 99 firms engaged in general mercantile business.

All persons engaged or interested in mercantile pursuits desirous of joining the Chamber and disposed to aid in carrying its objects into effect are eligible for election to membership by ballot. The Chamber member's subscription is Rs. 500 and the Associate member's subscription is Rs. 200 per annum. Gentlemen distinguished for public services or eminent in commerce and manufactures may be elected honorary members and as such are exempt from paying subscriptions. Any stranger engaged or interested in mercantile pursuits and visiting the Presidency may be introduced as a visitor by any Member of the Chamber inserting his name in a book to be kept for the purpose, but a residence of two months shall subject him to the rule for the admission of members.

Officers of the Year

The affairs and funds of the Chamber are managed by a committee of nine ordinary members, consisting of the President and Vice-President and seven members. The

Committee must as a rule meet at least once a week and the minutes of its proceedings are open to inspection by all members of the Chamber subject to such regulations as the Committee may make in regard to the matter. A general meeting of the Chamber must be held once a year and ten or more members may requisition through the officers of the Chamber a special meeting at any time for a specific purpose.

The Chamber elects representatives as follows to various public bodies—

The Council of State one representative

Special Work

One of the most important functions performed by the Chamber is that of arbitration in commercial disputes. Rules for this have been in existence for many years and have worked most satisfactorily. The decisions are in all cases given by competent arbitrators appointed by the General Committee of the Chamber and the system avoids the great expense of resort to the Law Courts.

A special department of the Bombay Chamber is its Statistical Department, which prepares a large amount of statistical returns connected with the trade of the port and of great importance to the conduct of commerce. The department consists of fourteen Indian clerks who by the authority of Government work in the Customs House and have every facility placed at their disposal by the Customs authorities. They compile all the statistical information in connection with the trade of the port, in both export and import divisions which it is desirable to record. No other Chamber in India does similar work to the same extent.

The Bombay Chamber publishes a Daily Arrival Return which shows the receipts into Bombay of cotton, wheat and seeds and a Daily Trade Return which deals with trade by sea and shows in great detail imports of various kinds of merchandise and of treasure while the same return contains particulars of the movements of merchant vessels.

The Chamber publishes twice a week detailed reports known as Import and Export manifests, which give particulars of the cargo carried by each steamer to and from Bombay.

Three statements are issued once a month. One shows the quantity of exports of cotton seeds and wheat from the principal ports of the whole of India. The second gives in detail imports from Europe, more particularly in regard to grey cloths, bleached cloths, Turkey red and scarlet cloths, printed and dyed goods, fancy cloth of various descriptions, woollens, yarns, metals, kerosene oil, coal, aniline dyes, sugar, matches, wines and other sundry goods.

The third statement is headed, Movements of Piece-Goods and Yarn by Rail, and shows the despatches of imported and local manufactured piece-goods and yarn from Bombay to other centres of trade served by the railways.

The Weekly Return issued by the Chamber shows clearances of a large number of important designations of merchandise. A return of Current Quotations is issued once a week on the day of the departure of the English mail and shows the rates of exchange for Bank and Mercantile Bills on England and Paris and a large quantity of general banking and trade information.

The annual reports of the Chamber are substantial tomes in which the whole of the affairs of the Chamber and the trade of the port during the past year are reviewed.

The Chamber has also a Measurement Department with a staff of 18 whose business is that of actual measurement of exports in the docks before loading in steamers. Certificates are issued by these officers with the authority of the Chamber to shippers and ship agents as to the measurement of cotton and other goods in bales or packages. The measurers are in attendance on the quays whenever there are goods to be measured and during the busy season are on duty early and late. The certificates granted show the following details—

- The date, hour and place of measurement
- the name of the shipper
- the name of the vessel
- the port of destination
- the number and description of packages
- the marks
- the measurement and in the case of goods shipped by bolls
- the registered number of the boat,
- the name of the tidal

Certificates of weight and of origin are also issued by the Chamber.

Bombay Millowners Association

The Bombay Millowners Association was established in 1875 and its objects are as follows—

- To encourage friendly feeling and an amity amongst Millowners and users of steam water and/or electric power on all subjects connected with their common good.
- To secure good relations between members of the Association.
- To promote and protect the trade commerce and manufactures of India in general and of the cotton trade in particular.
- To consider questions connected with the trade commerce and manufactures of its members.
- To collect and circulate statistics and to collect, classify and circulate information relating to the trade commerce and manufactures of its members.

Any individual partnership or company owning one or more mill or mills or one or more press or presses or one or more graining or other factory or factories actuated by steam, water, electric and/or other power is eligible for membership, members being elected by ballot. Every member is entitled to one vote for every complete sum of Rs. 50 paid by him as annual subscription.

The membership of the Association in 1927 numbered 86.

MAHARASHTRA CHAMBER OF COMMERCE

The Maharashtra Chamber of Commerce was started in September 1927 with the object of establishing friendly relations among merchants and factory-owners of Maharashtra safeguarding their interests against measures likely to affect them adversely collecting financial industrial and trade statistics and disseminating information thereabout amongst members of the Chamber.

Membership of the Chamber is confined to merchants and factory owners belonging to the City of Bombay, Bombay Suburban District,

Poona, Sholapur, Satara, Ratnagiri, Kolaba, Vasik, Ahmednagar, Dhule and Fardet and West Khandesh and Indian States adjoining these districts.

President—Sheth Wilchand Hirchand J.P.
Vice Presidents—R. B. Hanumantram Bannathani, M. L. Dahanukar, Hon. Secretary—R. C. Sohoni.

The offices of the Chamber are in the Phoenix Building, Graham Road, Ballard Estate, Bombay.

KARACHI

The objects and duties of the Karachi Chamber of Commerce are set forth in terms similar to those of Bombay. Qualifications for membership are also similar. Honorary Membership may be conferred upon any gentlemen interested in the affairs and objects of the Chamber subject to election by the majority of votes of members. All new members joining the Chamber pay Rs 500 entrance fee and the monthly subscription is Rs 18. The subscription to the Chamber's periodical returns is at present fixed at Rs 5 per month. The affairs of the Chamber are managed by a Committee of ten members consisting of a Chairman, Vice Chairman and eight members elected at the annual meeting of the Chamber as early in the year as possible. The Chairman elects a representative on the Bombay Legislative Council, three representatives on the Karachi Port Trust and two on the Karachi Municipality. There were last year 75 members of the Chamber. The following are the officers for the current year—

Chairman—Mr F Clayton CIE, MLC (Fleming Shaw & Co.)

Vice Chairman—R D England Esq (Messrs. Grahams Trading Co. Ltd.)

Committee—Messrs R S Backhouse (David Bussone & Co. Ltd.) J F Baxter (MacKinnon Mackenzie & Co.) P Crawford (Shaw Waller & Co.) J Fort (Volkart Bros.) Representatives on the Karachi Port Trust—Mr I Clayton MLC Mr E A Pearson & Mr J R Baxter

Representatives on the Karachi Municipality—Mr F R Hawkes, OBE & Mr E G H Milburn

Secretary—Major Alan Duguid AFC late RAF

Public Measurer—Major Alan Duguid (Ag.)

The following are the principal ways in which the Chamber gives a special assistance to members. The Committee take into consideration and give an opinion upon questions submitted by members regarding the custom of the trade or of the Port of Karachi. The Committee undertake to nominate European surveyors for the settlements of disputes as to the quality or condition of merchandise in which both parties desire the Chamber to do so. When two members of the Chamber or when one member and a party who is not a member have agreed to refer disputes to the arbitration of the Chamber or of an arbitrator or arbitrators nominated by the Chamber, the Committee will undertake to nominate an arbitrator or arbitrators under certain regulations. Similarly, the Chamber under certain regulations will undertake to appoint an arbitrator or arbitrators for the settlement of disputes in which neither of the parties are members of the Chamber. A Public Measurer is appointed under the authority of the Chamber to measure pressed bales of cotton wool, hides and other merchandise arriving at or leaving the port.

MADRAS

The Madras Chamber of Commerce was founded in 1836. All merchants and other persons engaged or interested in the general trade, commerce and manufactures of Madras are eligible for membership. Any assistant, signing a firm or signing per pro for a firm is eligible. Members who are absent from Madras but pay their subscriptions may be represented in the Chamber by their powers of attorney. Honorary members, subject to ballot. Honorary members thus elected are entitled to the full privileges of ordinary members. Election for membership as by ballot at a general meeting, a majority of two-thirds of the recorded votes being necessary to secure election. Every member pays an entrance fee of Rs 100 provided that banks, corporate bodies and mercantile firms may be represented on the Chamber by one or more members and are liable for an entrance fee of Rs 100 once in ten years each. The subscriptions shall not exceed Rs 100 per annum payable quarterly in advance, subject to reduction from time to time in accordance with the state of the Chamber's finances. Absentees in Europe pay no subscription and members temporarily absent from Madras pay one rupee per month. Honorary members are admissible to

the Chamber on the usual conditions. Members become ineligible if they do not pay in full at the entrance donation.

The Chamber undertakes arbitrations and surveys the granting or refusal of origin and the registration of trade marks. One of the rules for the last named is that no trade mark or ticket shall be registered on behalf of an Indian firm trading with a European name.

The following publications are issued by the Chamber: Madras Times Current and Market Report, Journal, Shipping and Madras Landing Charges and Harbour Dues Schedule.

There are 1 member and 1 Honorary Member on the Chamber in the current year and the Officers and Committee for the year are as follows—

Chairman—Mr C I Wood MLC

Vice Chairman—Mr H I P Pearson MLC

Committee—Mr F Birley Mr W M Brown Esq, Mr G W Chambers MLC, Mr J W Macfarlane and Sir James Simpson

The following are bodies to which the Chamber has its Registered Office in Madras. The objects of the Chamber are those usual for such bodies concerning the promotion of trade, especially in the Madras Presidency and the interests of members. Special objects are stated to be —

Madras Legislative Council Mr C. E. Wood
and Mr H. I. P. Pearson

- Bigandant Home for Incurables

All British corporations companies firms or persons engaged or interested in mercantile pursuits such as merchants bankers ship-owners and brokers or who are connected with agriculture mining manufactures insurance railways, commerce, art, science or literature shall be eligible to become Chamber Members. Every non-British concern or person similarly engaged or interested as indicated above, other than a subject of a State with which the British Empire was at war on September 19th, 1918 shall be eligible for election as an Associate Mem-

ber. The annual subscription of each Chamber Member shall be Rs 480 per annum and of each Associate Member Rs 360 per annum. An entrance fee of Rs 150 is payable by each new Member. Officials and others indirectly connected with the trade of the province or who may have rendered distinguished service to the interests represented by the Chamber may be elected by the Committee either on their own motion or on the suggestion of two Members as Honorary Members of the Chamber. Honorary Members are not required to subscribe to the funds of the Chamber.

The Chamber undertakes arbitrations in addition to its ordinary work. It does not publish any statistical returns.

Secretary—Mr O. A. Cuttles, M.B.E., Hon. Magistrate.

Asst. Secretary—D. P. Cristall, Esq.

Representative on the Council of State—Hon. Mr W. A. Gray.

Representatives on the Burma Legislative Council—W. T. Henry Esq., M.L.C., and R. B. Prior Esq., M.L.C.

Representatives on the Rangoon Port Trust Board—A. E. Donaldson Esq., J. R. Turner Esq., W. T. Howison Esq., and C. G. Wodehouse Esq.

Representative on the Rangoon Corporation—A. E. Donaldson Esq.

Victoria Memorial Park Trustee—J. R. D. Glascock Esq., C.I.E., M.L.C.

Pasteur Institute Committee—J. B. D. Glascock Esq., C.I.E., M.L.C.

Burma University Council—A. E. Donaldson Esq.

Rangoon General Hospital Advisory Committee—D. A. Dalziel Esq.

Police Advisory Board—J. B. Glascock Esq.

Rangoon Development Trust—W. T. Henry Esq., M.L.C.

Bigandant Home for Incurables—A. E. Donaldson Esq.

Rangoon European Stipend Board—Mr C. A. Cuttles, M.B.E., Hon. Magistrate.

Accompanyance Classes Advisory Board—Mr L. Baird.

Local Railway Advisory Council—M. L. Burnet Esq.

Rangoon Water Supply Committee—W. T. Howison Esq., J. R. Baird-Smith Esq., and T. Reive Esq.

Advisory Committee constituted under the Auxiliary Force Act, 1920—A. A. Bruce Esq.

COCANADA

The Cocanada Chamber of Commerce was established on 29th October, 1868.

The following are the members of the Chamber and has its headquarters at Cocanada, the chief port on the Coromandel Coast, north of Madras —

Members The Coromandel Co., Ltd. Ripley & Co. Volkart Bros. Jones & Co. Wilson & Co. Shaw Wallace & Co. Gordon Woodroffe & Co. (Madras) Ltd. J. H. Vavaseer & Co. Ltd. Best & Co. Ltd. Northern Circars Development Co. the Agent Imperial Bank of India

MEMBERS OF THE COMMITTEE

Mr J. Leask (Chairman)

C. D. Shores

, S. A. Cheesman

The rules of the Chamber provide that by the term member be understood a mercantile firm or establishment, or the permanent agency of a mercantile firm or establishment, or a society of merchants carrying on business in Cocanada, or other place in the Districts of Kistna, Godavari, Vizagapatam and Ganjam, and duly electing according to the Rules of the Chamber and that all such be eligible, but only

members resident in Cocanada can hold office. Members are elected by ballot. The Committee when called upon by disputing members or non members of the Chamber give their decision upon all questions of mercantile usage and arbitrate upon any commercial matter referred to them for final judgment. In either case a minimum fee of Rs. 16 must accompany the reference with Rs. 5 from a member and Rs. 1 from a member as payment for the Chamber's Sealed Certificate.

The Committee consisting of 3 members, including the Chairman, are elected by ballot at the general meeting in January in each year for a term of 12 months. The entrance fee for each member whose place of business is in Cocanada is Rs. 100 and for each member whose place of business is elsewhere is Rs. 25. The subscription for each member whose place of business is in Cocanada is Rs. 120 per annum, payable quarterly and for each member whose place of business is elsewhere is Rs. 60 per annum payable in advance. Committee meetings are held on the 1st Tuesday in the month and general meetings on the 3rd Tuesday or when ordered.

A Fortnightly Circular of current rates of produce, freight and exchange is drawn up by the Committee.

CEYLON

The Ceylon Chamber of Commerce was established on the 26th March 1839 and was incorporated in 1895, with its headquarters at Colombo. All firms and persons engaged in the general trade of Ceylon are admissible as members and every person or firm desirous of joining the Chamber must after having furnished one month's notice of their intention to apply for membership be proposed by one member seconded by another and balloted for by the whole Chamber. The affairs of the Chamber are conducted by a Board of Directors consisting of Chairman and Vice-Chairman and 10 members.

The following is the membership of the Board at the present time —

Mr J. J. Wall (Chairman) Mr C. F. Figg (Vice Chairman) Sir Edwin Hayward, Mr S. P. Hayley Mr H. G. P. Maddocks Mr E. Skrine Mr F. J. Jolliffe, Mr T. M. Caldwell Mr George Brown Mr C. A. Pearcey Mr T. H. Tatham and Hon'ble Mr C. S. Burns

Secretary.—Mr C. F. Whitaker

Representative to the Legislative Council.—Hon'ble Mr C. S. Burns

DEPARTMENT OF COMMERCIAL INTELLIGENCE AND STATISTICS.

The Department of Statistics was reabsorbed into the Department of Commercial Intelligence with effect from the 1st December 1922. The joint department has its office at No. 1, Council House Street, Calcutta, the headquarters of the Director-General. It embraces two distinct classes of work: (a) the collection and dissemination of information connected with

overseas trade which may be of use to Indian firms and (b) the compilation and publication of All India statistics. The latter are published in a series of volumes of which the most important are the Sea-borne Trade Accounts, Monthly and Annual Statistical Abstract, Agricultural Statistics (in two volumes) and the Review of Trade. The department

more reliable estimate of the financial position than in September. On such information as is now before them the Government of India are satisfied that there would be no serious risk of a large deficit in the current year if the cotton excise duty were suspended for the rest of the year and that there is a reasonable prospect that the budget for next year can be balanced without assistance from the cotton excise duty in the absence of any big change for the worse in the next few months.

I and my Government have therefore come to the conclusion that the moment has arrived when financial considerations permit of the abolition of the duty. This can, however, be finally accomplished only by the passage of the necessary legislation by the Indian Legislature.

In the meanwhile having regard to the emergency caused by the grave difficulties confronting the industry to the pledge given and reaffirm-

ed and to the expressed views of the Legislative Assembly I have decided that with effect from the 1st December 1925 the duty shall be suspended by Ordinance. It is the intention of my Government unless the financial position as disclosed in the budget estimates for next year substantially fails to confirm present anticipations to place before the Legislature at the time of the budget proposals for the abolition of the duty.

The duty having thus been suspended till the end of the financial year 1925-26 was finally abolished in the Budget & Finance Bill for 1926-27 passed by the Legislature in March 1926.

The statistics of yarn and cloth production previously maintained under the Cotton Duties Act are still on authority under the authority of Act XX of 1916 (The Cotton Industry Statistics Act.)

THE INDIAN CENTRAL COTTON COMMITTEE.

The Indian Cotton Committee of 1917-18 a full summary of whose report appears on pages 291-294 of the Indian Year Book of 1922, reviewed the position of cotton growing in India very thoroughly and made a series of recommendations for the improvement of cotton growing and marketing which have proved to be of the greatest value. One of their recommendations was that a permanent Indian Central Cotton Committee should be established to promote the welfare of the cotton-growing industry generally to advise the Government of India and Local Governments in regard to matters of cotton policy especially with reference to legislation for the prevention of malpractices and similar matters.

The Indian Central Cotton Committee was appointed by resolution of the Government of India in April 1919 and worked as an advisory body until 1923. Another recommendation of the original Committee was that a cotton cess should be levied to provide funds for the work of the Central Cotton Committee and for agricultural and technological research on cotton. The Cotton Cess Act was passed in 1923 and at the same time the Central Cotton Committee was incorporated and its membership enlarged in order to make it fully representative of all sections of the industry. Its constitution and present membership is as follows—

President—The Agricultural Adviser to the Government of India *ex-officio* (Dr D Clouston C.I.E.)

Representatives of Agricultural Departments—Mr B. D. Anstead (C.I.E. Director of Agriculture Madras) Dr H. H. Mann (Director of Agriculture Bombay) Mr G. Clarke (C.I.E. Director of Agriculture United Provinces) Mr D. Miller (C.I.E. Director of Agriculture Punjab) Mr F. J. Plymten (Director of Agriculture Central Provinces) Mr H. F. Robertson (Deputy Director of Agriculture, Burma).

The Director General of Commercial Intelligence and Statistics (*ex-officio*), Dr D. B. Meek O.B.E.

Representatives of Chambers of Commerce and Associations—Mr W. Ellis Jones (Vice-President) East India Cotton Association. Sir J. A. Kay (M.C.) Bombay Chamber of Commerce. Mr S. D. Suklatvala (Bombay) Millowners Association. Sir Purshotamdas Thakurdas (C.I.D. M.B. M.L.A.) The Indian Merchants Chamber. Mr G. C. R. Colbridge (Karachi) Chamber of Commerce. Seth Kusturbhai Lalhai (M.A. Ahmedabad) Mill Owners Association. Mr G. Z. Mohi Tuti (Cotton Chamber of Commerce, M. A. Wilkinson) Upper India Chamber of Commerce. Mr W. Roberts (Empire Cotton Growing Corporation).

Commercial representatives nominated by Local Governments—Sir B. Mehta (C.I.E.) Rao Bahadur K. J. Drahmukh (Central Provinces) Mr H. F. P. Pearson (Madras) Rao Bahadur Seth Prashu Daval (M.B. Punjab) Mr B. K. Lahiri (Bengal).

Co-operative Representative—Rao Bahadur V. Krishna Menon.

Representatives of Cotton Growers—Mr B. Ry B. Appaswamy Naidu (Garu) M. B. Ry B. P. Veesha Reddi (Garu) Madras. Rao Bahadur Bhimbhai Ramchandra Naik (Mr Bakshi Darshan Singh) Bombay. Kunwar Bikram Singh (Bai Bahadur) M. Amba Prasad (M.L.C.) United Provinces. Sardar Lajpat Singh (C.I.E.) L. H. G. (Gwalior) Punjab. Rao Bahadur M. G. J. (Jhansi) M. M. P. Koli (M.L.C.) Central Provinces and Berar.

Representatives of Indian States—Mr B. A. Collins (C.I.) (G.D.) (General of Industries and Commerce) Hyderabad State. Mr M. B. Sanavati (Director of Commerce and Industries) Baroda State. Mr H. H. Pandya, Administrative Officer, Department of Agriculture, Gwalior State. Mr A. Howard (C.I.B., Director, Institute of Plant Industry, Indore) Rajputana and Central India States.

Additional persons nominated by the Governor General in Council.—Mr. C. R. Palasett Representative of the Indore State Mr. W. Youngman, Economic Botanist to Government, Central Provinces Rao Sahab Bhim Bahai M. Desai, Deputy Director of Agriculture Gujarat Mr. G. R. Hillson, Cotton Specialist Madras Mr. G. H. Kumbhargal, Director of Agriculture, Mysore State.

Secretary.—Mr. B. C. Burt B.Sc., M.B.E., I.A.S.

Deputy Secretary.—Mr. W. J. Jenkins M.A., B.Sc. I.A.S. (Mr. J. H. Ritchie, I.A.S. Offg.)

Director Technological Laboratory.—Mr. A. James Turner M.A. B.Sc.

From the commencement the Central Cotton Committee took steps to deal with the various malpractices reported by the original Committee which by spoiling the reputation of the Indian cottons and rendering them less valuable for spinning purposes were reducing the returns of the grower and causing great economic loss to the country at large.

The **Cotton Transport Act** passed in 1923 enables any Local Government with the consent of its legislature, to notify definite areas of cotton for protection and to prevent the importation of cotton from outside the area except under license. Prior to the passing of the Act inferior cottons were imported in large quantities into the staple cotton tracts for purposes of adulteration and the reputation of several valuable cottons had been ruined by this abuse. The Act has now been applied to the most important staple cotton areas of the Bombay and Madras Presidencies and of the Baroda Rajpoot and Holkar States and with excellent results.

More recently the **Cotton Ginning and Pressing Factories Act** (XII of 1925) has been passed which provides for a certain measure of control of ginning and pressing factories and especially for the marking of all bales of cotton pressed with a press mark and serial number which enable them to trace to their origin. This Act with the minimum of official interference places the cotton trade in a position itself to deal with abuses and should lead to a very marked improvement in the quality of Indian cottons.

The Central Cotton Committee has also devoted considerable attention to constructive action for the improvement of the marketing of cottons and to bringing to the notice of the trade both in India and abroad those improved

varieties which have now reached a commercial scale and has carried out some important enquiries into the financing of the cotton crop up country and primary cotton marketing. As an instance of the progress in cotton growing which has been made since 1917 it may be stated that since that date approximately half a million bales of cotton of about 1st staple have been added to the Indian crop by the work of the Agricultural Departments. In general it may be said that the Committee affords a common meeting ground for representatives of all sections of the cotton trade and of the cotton growing industry thus enabling a number of problems to be tackled from every point of view and definite progress made towards their solution.

Research.—By means of the cotton census the Committee is provided with funds for the promotion of research. It maintains in Bombay a fully equipped Technological Laboratory which includes a complete experimental spinning plant and a scientific laboratory for research on the cotton fibre. This laboratory provides Agricultural Departments with complete and authoritative reports on the spinning value of new cottons thus providing a much needed facility. In addition it is now possible to undertake research work on a number of questions connected with the spinning qualities of cotton which have not been touched in the past. The Laboratory is unique in that it is probably the only institution of its kind which approaches the subject primarily from the standpoint of the grower.

The Committee contributes the greater part of the funds for the Indore Institute of Plant Industry which is a Central Agricultural Research Institute for cotton where many problems of fundamental importance are being studied.

In addition by means of grants in aid to Agricultural Departments it has provided for special investigations on problems of general applicability which would otherwise have been left untouched through lack of staff and funds. Such schemes are in operation in all major cotton growing provinces and now number fourteen.

His Excellency the Viceroy (Lord Reading) when he visited Bombay in December 1924 and formally opened the Committee's Spinning Laboratory laid great stress on the importance and value of the Committee's work.

THE EAST INDIA COTTON ASSOCIATION, LIMITED

Bombay.—The Association is the out come of the findings of the Indian Cotton Committee which was appointed by the Governor General in Council under a resolution dated September 27th 1917. Until the end of 1917 the Cotton Trade of Bombay was in the hands of seven distinct bodies viz. The Bombay Cotton Trade Association, Ltd. The Bombay Cotton Exchange Ltd. The Bombay Millowners Association Ltd. The Bombay Cotton Brokers Association Ltd. The Marwari Chamber of Commerce, The Bombay Cotton Merchants and Miscellaneous Association Ltd. and The Japanese Cotton Shippers Association. None of these bodies were representative of the trade as a

whole and their interests often came into conflict with each other. The necessity of a system of periodical settlements such as existed in Liverpool was badly felt especially when speculation was rife in futures which was so excessive in 1913 that the Trade had to invoke the aid of Government to prevent a financial crisis.

The Cotton Contracts Committee was created under the Defence of India Act in June 1918 as a temporary measure under the Chairmanship of Mr. G. Wiles I.C.S. This body was replaced by the Cotton Contracts Board in 1919 which continued to function until May 1922, when the Act under which the Board

worked was repealed and its functions were carried on by the newly constituted East India Cotton Association who were granted a charter by Act No XIV of 1922. Since then the Association, subject to its By Laws being passed by Government have controlled the Cotton Trade of Bombay.

The present constitution of the Board is as follows—Sir Purshotamdas Thakurdas K. T. B. M. B. M. L. A. President Importers Panel Haridas Madhavdas Esq. Vice President Exporters Panel The Hon. Mr. Ratansay D. Motarji F. F. Stokman, Esq. Lalji Naranj, Esq. M. L. C. Millowners Panel H. F. Hobbs, Esq. G. Boyagis, Esq. Exporters Panel K. H. McCormack Esq. Chhaji Chandraji Bhunbhunwala Esq. Importers Panel Beniprasad Dalmia Esq. W. G. McKee Esq. Commission Agents and Merchants Panel Jammadas Samdas Esq. Bhaldas Nannal Esq. Jethawallas Panel Major W. Ellis Jones Anandilal Podar Esq. Jaghvan Ujamsbi, Esq. Brokers Panel

Officers

D. Mehta Esq. B. A. Secretary F. E. Wadsworth, Esq. J. P. Manager Clearing House C. M. Parikh, Esq. B. Com. Assistant Secretary

Some of the objects for which the Association is established are—To provide and maintain suitable buildings or rooms for a Cotton Exchange in the City of Bombay and elsewhere in India and to regulate admission to and prohibition of the use thereof and the nature and times of such use whether in the case of the general body or particular classes or any individual or firm or company using the Exchange to provide forms of contracts compulsory or permissive and regulate the making carrying out and enforcement or cancellation of contracts to adjust by arbitration or otherwise controversies between persons engaged in the Cotton Trade to establish just and equitable principles in the said Trade to maintain uniformity of control of the said trade to fix or adopt standards of classification of cotton to acquire preserve and

disseminate useful information connected with the Cotton interest throughout all markets, to decrease or insure the local risk attendant upon business and generally to control, promote and regulate the Cotton Trade in the Presidency of Bombay and elsewhere in India improve its stability and augment the facilities with which it may be conducted To establish and maintain a Clearing House for the purpose of dealing with cotton transactions and to regulate admission to and prohibition of the use thereof and the nature and times of such use whether in the case of the general body or particular classes or any individual or firm or company using the Clearing House To regulate the handling and exportation of Cotton from India and the importation of Cotton into India in so far as it may be imported To bring prosecute or defend or aid in bringing prosecuting or defending any suits actions proceedings applications or arbitrations on behalf of Members or Associate Members or Special Associate Members or otherwise as the Directors of the Association may think proper or conducive to the objects of the Association and to prescribe the principle of framing of contracts with a view to eliminate the temptation and possibility of speculative manipulation

The Association has erected a fine Exchange Building at Sewri Cotton Depot containing 112 Buyers Rooms and 91 Sellers Rooms and a large Trading Hall on the lines of Liverpool and New York Exchanges

The inaugural ceremony of the opening of the Exchange Building was performed by His Excellency Sir Leslie Wilson Governor of Bombay on the 1st December 1923 in the presence of a large gathering which included most of the prominent business men of the City and many foreign officials

There is a membership of 480 members

The Bombay Cotton Annual containing matters relating to every branch of the Trade is published annually in November and statistics are issued twice weekly

The Textile Industry.

India has been the home of the cotton trade from the earliest times. Its cotton, known as white wool, was well known to the ancients and its cloth was familiar to the West in the days of the overland route. The name Calico comes from the fine woven goods of Calicut, and the products of the Deccan handlooms are still remarkable as the finest muslins human skill can produce

Indian Cotton.

The exports of Indian cotton began to assume importance with the opening of the sea route

They received an immense stimulus during the American Civil War when the close blockade of the Confederate ports produced a cotton famine in Lancashire, and threw the English spinners back on India for their supply of raw material. When the war broke out the shipments of Indian cotton were 528,000 bales, but during the last year of the war they averaged 973,000 bales. Most of this cotton was sold at an enormously inflated price, and induced a flow of wealth into Bombay, the great centre of the trade, for which there was no outlet. The consequence was an unpro-

dentent outburst of speculation known as the "Share Mania," and when the surrender of Lee re-opened the Southern Ports widespread ruin followed. It is estimated that the surplus wealth brought into the country by the American Civil War aggregated £92 millions. Since then the cultivation of Indian cotton although interrupted by famine, has steadily increased. For the last season for which returns are available 1925-26 the total area in all the territories reported on was computed at 27 980 000 acres which is 1 499 000 acres or 4 per

cent above the revised figures of last year. The total estimated outturn was 6 038,000 bales of 400 lbs. which is 1 per cent below the yield of last year.

Bombay the Central Provinces and Hyderabad are the chief producing centres. The following table gives the rough distribution of the outturn. The figures are the estimated figures for the past season, and are not exact but they indicate the distribution of the crop —

Provinces and States.	1925-26 (Provisional estimations.)	
	Area (1 000 acres.)	Yield (1 000 bales.) †
Bombay (a)	6 768	1,867
Central Provinces and Berar	4 982	940
Madras (b)	2 260	379
Punjab (b)	2,799	594
United Provinces (b)	801	157
Burma	474	3
Bihar and Orissa	73	14
Bengal (b)	165	15
Ajmer Merwara	48	61
Assam	46	15
North-West Frontier Province	20	5

Hyderabad	3 267	808
Central India	1 234	222
Baroda	761	124
Gwalior	644	107
Kajaputana	513	81
Mysore	97	25
Total	25 006	4,952

The distribution of the export trade is indicated in the appended table.

Exports of Cotton.—A portion of the Indian crop of the season 1924-25 and a portion of the crop of the season 1925-26 came into the statistical consideration in the exports during the year 1925-26. The exports amounted to nearly 12 million cwts valued at Rs 81 crores against 13½ million cwts valued at Rs 94 crores in 1923-24. This represents 47 per cent of the total value of raw materials exported from India and 24 per cent of the total exports. The exports showed a decrease of 12 per cent in quantity and 7 per cent in value. The average declared value per cwt rose from Rs 73 to 77 or by 5 per cent whereas the total decrease was Rs 7 crores. The principal purchasers of Indian cotton are Japan and China which together took 59 per cent of the total export during 1924-25. Besides these, Germany, Belgium, the United Kingdom, Italy, and France who are large consumers of Indian raw cotton, had 5, 6, 5, 14 and 4 per cent respectively.

—	Exports of Raw Cotton.		
	1923-24 Cwts.	1924-25 Cwts.	1925-26 Cwts.
United Kingdom	1 037,100	577,760	803,620

† = Bales of 400 lbs. each.	3,763,888	3,553 484	4,178,129

(a) Including Sind and Indian States.

(b) Includes Indian States.

* Against 2,695 000 shown in February 1925-26

† Bales of 400 lbs. each.

Bombay is the great centre of the cotton trade. The principal varieties are Dholleras, Broach, Coomras (from the Berar), Bharwar and Coomptas. Broach is the best cotton grown in Western India. Hinganghat cotton from the Central Provinces, has a good reputation. Beugals is the name given to the cotton of the Gangetic valley, and generally to the cottons of Northern India. The Madras cottons are known as Westerns, Coomadas, Coimbatore and Tinnevely. The best of these is Tinnevely. Cambodia cotton has been grown with success in Southern India, but it shows a tendency to revert. The high prices of cotton realised of recent years have given a great impetus to cultivation. Government have also been active in improving the class of cotton produced by seed selection, hybridisation and the importation of exotic cottons. Although these measures have met with a considerable measure of success they have not proceeded far enough to lighten the

whole output, which still consists for the most part of a short-staple early maturing variety, suitable to soils where the rainy season is brief.

Reference has been made to the popularity of the Indian handloom cloths in the earliest days of which we have record. This trade grew so large that it excited alarm in England, and it was killed by a series of enactments, commencing in 1701 prohibiting the use or sale of Indian calicoes in England. The invention of the spinning jenny and the power loom and their development in England converted India from an exporting into an importing country, and made her dependent on the United Kingdom for the bulk of her piece-goods. The first attempt to establish a cotton mill in India was in 1838 but the foundations of the industry were really laid by the opening of the first mill in Bombay in 1856. Thereafter with occasional set backs from famine, plague and other causes, its progress was rapid.

The following statement shows the quantity (in pounds) of yarn of all counts spun in all India for the twelve months April to March in each of the past three years —

	1924 25	1925 26	1926 7

(a) Including the production of one mill only

(b) Represents production during the 4 months April to July 1926 only the mill being closed from August 1926.

† Includes 740 256 lbs. for which details are not available

* Includes 64,235 lbs.

Note The cotton mills in Burma started work in May 1923.

The spinning of yarn is in a large degree centred in Bombay the mills of that province producing nearly 74 per cent. of the quantity produced in British India. The United Provinces of Agra and Oudh and Madras

produced about 7 per cent. and 8 per cent respectively, while Bengal and the Central Provinces produced 4.7 and 5.2 per cent. Elsewhere the production is as yet very small.

BOMBAY ISLAND.

Here is a detailed statement of the quantity (in pounds) and the counts, or numbers, of yarn spun in Bombay Island —

31-40	19 367 004	19 737 488	27 656 603
Above 40	5,822 227	5 834 324	11,681 458
Wastes, &c	577 745	1 014 538	3 906 002
TOTAL	719 589 994	689 427 479	807 116,116

In the early days of the textile industry the energies of the millowners were largely concentrated on the production of yarn, both for the China market, and for the handlooms of India. The increasing competition of Japan in the China market the growth of an indigenous industry in China and the uncertainties introduced by the fluctuations in the China exchanges consequent on variations in the price of silver compelled the millowners to cultivate the Home market. The general tendency of recent years has been to spin

higher counts of yarn, importing American cotton for this purpose to supplement the Indian supply to erect more looms and to produce more dyed and bleached goods. This practice has reached a higher development in Bombay than in other parts of India and the Bombay Presidency produces nearly 78.8 per cent. of the cloth woven in India. The United Provinces produces 3.2 per cent. the Central Provinces 4 per cent. and Madras 4 per cent. Grey and Bleached goods represent nearly 74 per cent. of the whole production.

ANALYSIS OF WOVEN GOODS.

The following brief extract is taken from the statement of the quantity (in pounds and their equivalent in yards) and description of woven goods produced in all India, including Native States —

	1924-25	1925-26	1926-27
Grey and Bleached piece-goods—			
Pounds	325 265 258	339,265 174	381 711 804
Yards	1,332,368,440	1 414 303 805	1 577 237 557
Coloured piece-goods—			
Pounds	125 580 102	116 695 306	145,320 359
Yards	588 078 412	540 156 845	681 477 873
Grey and coloured goods other than piece goods—			
Pounds	2 953 836	3 726 511	4 151 302
Dozens	611 439	955 804	1 006 348
Hosiery—			
Pounds	672 850	872,281	1 118 190
Dozens	276 726	316 546	391 818
Miscellaneous—			
Pounds	3 949 308	3 712 110	4 289 022
Cotton goods mixed with silk or wool—			
Pounds	272,006	707 712	2 313 700
Total—			
Pounds	458 893,400	465 039 069	548 404 437
Yards	1 970 799 233	1 954 484 657	2,156 704 960
Dozens	888 165	1 272 350	1 398 861

BOMBAY WOVEN GOODS

The output of woven goods during the three years in the Bombay Presidency was as follows —

The weight (in pounds) represents the weight of all woven goods the measure in yards represents the equivalent of the weight of the grey and coloured piece goods.)

	1924-25	1925-26	1926-27
Pounds	347 672 53	342 030 412	407,282 500
Yards	1,564,000,621	1,510,385,880	786 327,306
Dozens	579 884	886 931	828 849

The grand totals for all India are as follows —

	1924-25	1925-26	1926-27
Pounds	458 893,400	465,039 069	
Yards	1,970,799,233	1,954,480 657	
Dozens	888,165	1,272,350

The Jute Industry

Considering its present dimensions the jute industry of Bengal is of very recent origin. The first jute mill in Bengal was started at Rishra in 1855, and the first power-loom was introduced in 1859. The original output was 8 tons per day. In 1909 it had grown to 2,500 tons per day. It is now 4,000 tons per day, and it shows every indication of growing and expanding year by year. Another interesting thing about the jute industry of Bengal is that although it is practically a monopoly of Scotsmen from Dundee, the industry itself owes its inception to an Englishman. The founder of the industry was George Acland, an Englishman who began life as a midshipman in the navy, and was for some years in the East India Marine Service. He quitted this service while still a young man, and engaged in commercial pursuits in Ceylon where he was successful. Later on he turned his attention to Bengal, and arriving in Calcutta about 1833 he got into touch with the management of the paper works then at Serampore where experiments were being tried with country grasses and fibre plants to improve the quality or cheapen the manufacture of paper. This seems to have suggested to Acland the manufacture of rees, and in 1854 he proceeded to England with a view to obtaining machinery and capital in order to manufacture goods from that material. During this trip he visited Dundee and while there Mr John Kerr, of Douglas Foundry suggested to him the importing of machinery into Bengal "where the jute comes from and spin it there. This suggestion bore fruit, for shortly afterwards Acland placed orders with Kerr for a few systems of preparing and spinning machinery, and returned to India the same year accompanied by his two sons and a few Dundee mechanics who were to assist him in erecting and operating the first jute mill in Bengal. This, as has been stated, was at Rishra, the site of the present Wellington mills near Serampore and here, in 1855, the first machine spun jute yarns were made. As not infrequently happens the pioneer got very little out of his venture. After several ups and downs the Acland interest in the Rishra mill ceased in 1867 and the company which Acland had formed in 1854 was wound up in 1868.

Power looms.—The pioneer's example was followed by Mr George Henderson of that silk and firm and in 1859 the Borneo Jute Co. was launched under his auspices. To this company is due the credit of introducing the power loom for jute cloth. Unhindered by the financial difficulties which had burdened the Aclands, the Borneo Jute Co. made rapid progress doubling their works in 1864 and clearing their capital twice over. In 1872 the mills were turned into a limited liability company the present Barmagore Jute Manufacturing Co. Ltd. Four other mills followed in succession—Gouripore, Seragunge, and India Jute Mills.

From 1866 to 1873, writes Mr David Wallace in "The Romance of Jute," the five mills excepting the Rishra mill simply earned money and brought the total of their looms up to 1,250. To illustrate the pro-

perity of the industry at this period we may take the dividends paid by the Barmagore Company. On the working of their first half year a 15 per cent interim dividend was declared which seemed to justify the enormous capital at which the company was taken over from the Borneo Company and shares touched 48 per cent premium. The dividend for the first year ending August 1873, was 25 per cent. for 1874, 20 per cent. and for 1875 10 per cent. Then came a change. The investing public had forgotten the effect of the Port (canal) bubble and the condition of the jute industry in 1872-73 seemed to offer a better return than coal or tea, both of which had just enjoyed a boom. It was only necessary to issue a prospectus of a jute mill to have all the shares snapped up in the course of an afternoon.

In 1872-73 three new companies were floated locally—the Fort Gloster Budge Budge and Sibpore and two Home companies the Champdany and Samnugger, all of which commenced operations in 1874. In 1874-5 eight other mills were launched—the Howrah Oriental (now Union) Asiatic (now Soorah) Clive Bengal Pressing and Manufacturing Co. (now the Bellaghata Barmagore branch mill) Rustonjee (now the Central) (run by the Government in England) and Hastings owned by Messrs Birkmyre Bros of Greenock fame—in all thirteen new companies, coming on all of a heap and swelling the total looms from 1,250 up to 3,500. This was too much of a strain for the new industry and for the next ten years all the mills had a severe struggle. The older ones all survived the ordeal, but four of the new concerns—the Oriental, the Asiatic, the Bengal Pressing and Manufacturing Co. and the Rustonjee—became moribund to appear again later on under new names, and management Fort Gloster also suffered badly.

Between 1875 and 1882 only one new mill was put up. This was Kamarhaty promoted by Messrs Jardine Skinner & Co. which came into being in 1877 as the result of Dr Barry's visit to Calcutta in 1876 when he transferred the agency of the Gouripore Co. from Messrs Jardine, Skinner & Co. to his own firm. This mill together with additions made by some of the other mills brought the total looms up to 5,150 in 1882. By the end of 1885 the total was further augmented by the Hooghly Titaghur Victoria and Kankarnab mills, bringing the number of looms at work up to 6,700. From this period on to 1894 no new mills came into existence except the Calcutta Twist Mill with 2,400 spindles since merged into the Wellington branch of the Champdany Co. Between 1896 and 1900 the following new mills were started—the Gordon Twist Mill with 2,800 spindles (now acquired by Anglo-India), Khardah Gondolpara (French owned), Alliance Arathoon Anglo-India Standard, National, Delta (which absorbed the Seragunge), and the Kinlona. A full of four years witnessed large extensions to the existing mills after which came the following series of new mills besides further heavy extensions—Dalhousie, Alexandra, Nalhati Lawrence Behanes, Belvedere, Auckland Kelvin and Northbrook.

Progress of the Industry

THE record of the jute industry may well be said to be one of uninterrupted progress. The following statement shows quinquennial averages from the earliest year for which complete information is available with actuals for each year from 1917-18 up to 1924-25 and the figures in brackets represent the variations for each period taking the average of the quinquennium from 1879-80 to 1883-84 as 100 —

	Number of mills at work	Authorised Capital (in lakhs of Rs.)	Number (in thousands) of		
			Persons employed	Looms	Spindles.
Average—					
1879-80 to 1883-84	21 (100)	270.7 (100)	28.8 (100)	5.5 (100)	68 (100)
1884-85 to 1888-89	24 (114)	341.6 (126)	62.7 (156)	7 (127)	188.4 (187)
1889-90 to 1893-94	26 (124)	402.6 (149)	64.3 (166)	8.3 (151)	172.6 (196)
1894-95 to 1898-99	31 (148)	522.1 (193)	86.7 (223)	11.7 (213)	244.8 (278)
1899-1900 to 1903-04	36 (171)	680 (251)	114.2 (294)	16.2 (295)	334.6 (390)
1904-05 to 1908-09	46 (219)	940 (355)	163 (425)	24.8 (451)	510.5 (580)
1909-10 to 1913-14	60 (286)	1,208 (448)	208.4 (537)	33.5 (609)	691.8 (786)
1914-15 to 1918-19	73 (348)	1,403.6 (519)	259.8 (668)	39.7 (722)	821.2 (953)
1917-18	76 (362)	1,428.5 (528)	266 (686)	40.6 (733)	834 (948)
1918-19	76 (362)	1,477.2 (548)	255.5 (710)	40 (727)	839.9 (954)
1919-20	76 (362)	1,563.6 (579)	280.4 (724)	41.0 (745)	856.3 (973)
1920-21	77 (367)	1,923.5 (712)	268.4 (758)	41.6 (745)	869.9 (998)
1921-22	81 (386)	2,122.4 (784)	288.4 (743)	49.0 (782)	904.3 (1,032)
1922-23	86	2,325	321.2 (828)	47.5 (863)	1,003.1 (1,140)
1923-24	89	2,464	330.4 (811)	49.0 (891)	1,044.4 (1,185)
1924-25	90	2,213	341.7 (881)	50.3 (914)	1,067.1 (1,211)

The production of the mills has increased to a still greater extent. The following figures show the exports of jute manufactures and the declared values for the same periods. The value of jute manufactures exported by sea in 1924-25 was over thirty three times as great as the average value of the export in the period 1879-80 to 1883-84 —

	Jute manufactures.		Value in lakhs of Rs
	Gunny bags in millions of number	Gunny cloths in millions of yards	
1879-80 to 1883-84	54.9 (100)	4.4 (100)	124.9 (100)
1884-85 to 1888-89	77 (140)	15.4 (350)	162.9 (130)
1889-90 to 1893-94	111.5 (203)	41 (932)	239.3 (232)
1894-95 to 1898-99	171.2 (312)	182 (4,136)	518 (415)
1899-1900 to 1903-04	206.5 (376)	427.2 (9,709)	328.5 (662)
1904-05 to 1908-09	267.8 (469)	698 (15,864)	1,442.7 (1,154)
1909-10 to 1913-14	339.1 (618)	970 (2,045)	2,024.8 (1,621)
1914-15 to 1918-19	667.6 (1,216)	1,156 (26,273)	4,019.3 (3,218)
1919-20	842.7 (624)	1,275.1 (28,980)	5,001.5 (4,004)
1920-21	858.9 (987)	1,857.7 (33,800)	5,299.4 (4,273)
1921-22	846.7 (715)	1,120.5 (28,000)	2,998.6 (2,419)
1922-23	844.2 (637)	1,254.3 (31,350)	4,040.4 (3,268)
1923-24	418.7 (752)	1,848.7 (30,652)	4,228.3 (3,382)
1924-25	425.1 (774)	1,456.2 (33,095)	5,148.8 (4,122)
1925-26	425.0 (71.4)	1,461.3 (38,211)	5,752.1 (4,603)
1926-27	449.0 (813)	1,503.1 (34,161)	5,285.2 (4,237)

Until the outbreak of war the exports by sea of raw jute were marked by increases from year to year although the increase was very much less than that in the case of manufactures. During the war years exports declined very considerably. The cessation of the war stimulated the export trade and in 1919-20, the exports showed an increase as compared with the average of the war quinquennium (1914-15 to 1918-19). In the following two years the exports recorded a decrease and in 1922-23 they again made a recovery and amounted to 578,000 tons.

	Jute raw, ton
Average 1879-80 to 1882-83	375,000 (100)
" 1884-85 to 1888-89	446,000 (119)
" 1889-90 to 1893-94	500,000 (133)
" 1894-95 to 1898-99	615,000 (164)
" 1899-1900 to 1903-04	635,000 (169)
" 1904-05 to 1908-09	755,000 (201)
" 1909-10 to 1913-14	765,000 (204)

" 1922-23	578,000 (154)
" 1923-24	680,000 (170)
" 1924-25	696,000 (185)
" 1925-26	647,000 (172)
" 1926-27	709,000 (189)

The total quantity of jute manufactures exported by sea from Calcutta during the year 1922-23 was 688,000 tons as against 689,000 tons in the preceding year and 608,500 tons in the pre-war year 1913-14. The values of these exports amounted to Rs 40.23 lakhs or an increase of Rs 10.36 lakhs over the preceding year and Rs 12.08 lakhs over the pre-war year. The shipments of gunny bags were valued at Rs 16.82 lakhs and of gunny cloth Rs 24.24 lakhs as against Rs 13.86 and Rs 16.92 lakhs respectively in the preceding year and Rs 12.48 and Rs 15.55 lakhs in the pre-war year.

The price of raw jute reached a very high point in 1906-07 the rate being Rs 65 per bale, in 1907-08 it dropped to Rs 42 per bale, and the fall was accentuated in 1908-09 and 1909-10, the price having declined to 36 4 and Rs 31 in 1911, 18 it dropped to Rs 38-8-0 but rose again in 1919-20 up to Rs 77 8-0. In 1920-21 it dropped to Rs 65 but rose again to Rs 86

It again declined to Rs. 68. In 1921-22 the price rose to Rs. 78 at the end of September, but fell back again to Rs. 50 at the end of November and recovered at Rs 64 at the close of the year.

Assam	168,000	186,000
Total	3 371,100	3,846,900

* Revised

† Including Nepal

The Indian Jute Mills Association now one of the most important if not the most important of the bodies affiliated to the Bengal Chamber of Commerce was started under the following circumstances.—In 1886 the existing mills finding that, in spite of the constant opening up of new markets, working results were not favourable came to an agreement with the late S. B. J. Clarke Secretary to the Chamber of Commerce as trustee to work short time. The only mills which stood out of this arrangement were the Hooghly and Serajgunge. The first agreement for six months dating from 15th February 1886 was subsequently renewed at intervals without a break for five years up to February 15, 1891. The state of the market at the time of the renewals dictated the extent of the short time which varied throughout the five years between 4 days a week, 9 days a fortnight and 6 days a week. Besides short time 10 per cent of the sacking looms were shut down for a short period in 1890. An important feature of this agreement was a mutual undertaking by the parties not to increase their spinning power during the currency of the agreement, only a few exceptions being made in the case of a few incomplete new mills.

The present officials of the Association are —
Chairman—Mr C. F. Rose
Members of Committee—Mr C. G. Cooper M.L.C., Mr R. B. Laird M.L.C., Mr M. P. Thomas and Mr T. Douglas.

Working days—With the introduction of the electric light into the mills in 1896 the working day was increased to 16 hours. Saturday included, which involved an additional amount of cleaning and repairing work on Sundays. In order to minimise this Sunday work and give them a free Sunday an agitation was got up in 1897 by the MHI European assistants to have the engines stopped at 2 or 3 p.m. on Saturdays. The local Government took the matter up but their action went no further than applying moral suasion backed by a somewhat half-hearted threat. The MHI Association held meetings to consider the question and the members were practically agreed as to the utility of early closing on Saturdays, but, *more was* could not trust themselves to carry it out without legislation. Unfortunately the Government of India refused to sanction the passing of a Resolution by the provincial Government under the Factory Act and the matter was dropped. Only a year or two ago the Jute Mills Association in despair sought out an American business expert Mr J. H. Parks to advise them on the possibility of forming a jute trust with a view to exercising some control over the production and price of jute. Mr Parks came and wrote a report which the Association promptly pigeon holed because the slump was over and the demand was so prodigious that there was no need to worry about the price of jute.

An Association, styled the **Calcutta Jute Dealers Association**, has been formed in Calcutta to promote and to guard the common interests of its members as dealers in jute for local consumption. The members are balars and brokers of jute for sale to the jute mill in and around Calcutta. The **Committee**—Mr Geo. Morgan, M.L.C. *Chair-*

man Members—Messrs D. King, O. S. Taylor, E. W. Christie, J. L. Ruthven, H. M. Sherman.

Effects of the War—The official review of the Trade of India in 1916-17 says.—The value of the exports of raw jute increased in 1916-17 by nearly Rs. 65 lakhs to Rs. 1,620 lakhs. The quantity exported, however, was less than in the preceding year. The estimated yield of the crop was 12 per cent, above that of the previous year viz. 1,490,000 tons or 8,340,000 bales. Owing to the lack of tonnage and other abnormal circumstances brought about by the war the quantity exported was 10 per cent below that of the previous year. Of the consumers the United Kingdom and Italy took less while the United States, France (mainly via Dunkirk), Russia (via Vladivostok) and Brazil took greater quantities. There were of course no exports to enemy countries which took more than 27 per cent in the five years ending 1913-14 the pre-war year. The increase in the value accompanied by a decrease in the volume of exports was due to the very high range of prices during the months of September, October, November and December. Towards the close of the year under review prices steadily declined and have since gone still lower.

Jute Manufactures—The value of the exports now approximates to Rs. 42 crores. In spite of the war with its attendant difficulties of freight and finance the exports of gunny cloth showed an increase of Rs. 241 lakhs of which Rs. 168 lakhs were due to higher prices and Rs. 78 lakhs to an increase in the volume of exports. There were also an increase of Rs. 118 lakhs in the value of gunny bags exported. The number of bags shipped increased while the weight decreased and bags for war purposes being lighter than the ordinary bags for transporting grain. Exports to Australia in 1916-17 were a record. The United Kingdom with Australia took more than half of the number of bags exported while the United States took more than half of the quantity of cloth exported.

There were 74 mills at work throughout the year with 41,292 looms and 868,839 spindles. The number of persons employed was 285,881. There were no difficulties as regards the supply of labour.

The number of gunny bags shipped from Calcutta during 1922-23 declined from 386 million bags to 342 million bags, but the value increased from Rs. 12.87 lakhs to Rs. 15.8 lakhs. Shipments of gunny cloth rose from 1,120 million yards to 1,251 million yards valued at Rs. 15.92 lakhs and Rs. 24.24 lakhs respectively.

Hemp and Jute Substitutes.

Experiments have been made during the last few years by the Agricultural Department of the Government of India with the **Deccan hemp plant** (*Hibiscus cannabinus*) which yields a fibre very similar to jute. As a result a new variety of the plant, known as Type B, has been obtained which it is now proposed to introduce into several parts of India and as a beginning the variety is to be grown on a number of estates in Bihar. A sample of the fibre prepared from this variety by the usual methods of retting was 10 ft to 12 ft long, of an exceptionally light colour, well cleaned, and of good strength.

It was valued at £18 per ton with Himilpatan jute at £12 10s., and Bengal first mark jute at £17 per ton. Deccan hemp has been grown fairly extensively in Bombay, the Central Provinces, and Madras, where it is used for ropes and cordage and also for the manufacture of a coarse sackcloth. A valuable feature of the plant is its unsuitability for cultivation in such parts of India as are not suitable for jute.

Prior to the war the United Kingdom's requirements of hemp were mainly supplied by the following countries in order of importance—the Philippine Islands, New Zealand, India, Russia, Italy and Germany. The opinion appears to be held that the effect of the war will be to cause very considerable changes in the character of the fibre market. There will probably be labour difficulties. It is thought in the prepa-

ration of the hemp crops of Russia and Hungary and it is not unlikely that the world will look to countries such as India for the supply of fibres which may be used as substitutes for the European varieties of hemp. There can be no doubt that one of the early effects of the war was to turn up hemp prices. As far as Indian hemp is concerned, values were persistently depreciated during the first six months of 1914 owing to large stocks held, but the closure of the Russian hemp market on the outbreak of war resulted in a marked improvement in values, and there was a keen demand and a considerable rise in price. Exports from Calcutta during 1922-23 made a great recovery from the previous year. The quantity advanced by 27 per cent from 197,412 cwts to 269,487 cwts and the value from Rs. 6.93 lakhs to Rs. 86.68 lakhs.

THE WOOL INDUSTRY

Wool exported from India consists not only of wool grown in India itself, but of imports from foreign sources, these latter coming into India both by land and by sea. Imports by sea come chiefly from Persia, but a certain quantity from Persia also comes by land while the main imports are from Afghanistan, Central Asia, Tibet and Nepal. Quetta, Shikar pur, Amritsar and Multan are the main collecting centres for wool received by land from Afghanistan and Persia, whence it is almost invariably railed to Karachi for subsequent export overseas.

Imports and Exports.—A considerable amount of wool is imported annually from Tibet and in normal years from Afghanistan. Imports of raw wool in 1926-27 were valued at Rs. 82 lakhs and of woollen yarns and manufatures at Rs. 27 lakhs. Exports in the same year were valued at Rs. 39½ lakhs (raw wool) and Rs. 83 lakhs (woollen yarn and manufatures).

Production in India.—The production of wool in India is estimated at 60 million lbs, the estimate being arrived at from the available figures of the number of sheep in the country and their estimated yield per fleece, the average quantity of wool yielded per sheep per annum being taken at only 2 lbs.

All Indian wools are classed in the grade of **carpet wools** and it is correct to say of perhaps fully half the breeds of sheep found on the plains of India that they yield a kind of hair rather than of wool. They are reared chiefly on account of the mutton and the fleece has been generally regarded as of subsidiary interest. In many respects, in actual fact the Indian plains sheep approximate more nearly to the accepted type of the goat rather than of the sheep. Short remarks in his manual on Indian cattle and sheep particularly with respect to the Madras type that they "resemble a greyhound with tucked up belly having some coarseness of form, the feet light the limbs bony, sides flat and the tail short."

Mill manufacture.—The number of woollen mills at work in British India in 1902 was three, with an authorised capital of Rs. 28,50,000 and employing 23,800 spindles and 224 looms. The number of persons employed in the industry then was 2,259, and the quantity of woollen goods produced 2,148,000 lbs. At

the end of 1917 the number of mills had risen to five, with an authorised capital of Rs. 2,68,50,000, employing 38,608 spindles and 1,106 looms. The weight of goods produced then was 9,744,284 lbs and the number of persons employed 7,824. With regard to Indian States there was one mill in Mysore in 1903 with a capital of Rs. 6,00,000 employing 1,420 spindles and 45 looms. The quantity of goods produced was 1,186,000 lbs and the number of persons employed 297. In 1907 there was still only the one mill working in an Indian State—the authorised capital had been increased to Rs. 15,00,000, the quantity of goods produced to 1,724,087 lbs and the number of persons employed to 563. Three of the mills manufacture all classes of woollen and worsted goods, the remainder manufacturing blankets only. The existence of these mills in India proved of great service to Government in the meeting of war requirements, and they were all employed to their fullest capacity in supplying army demands for greatest cloth, serge, puttees, flannels, blankets and hosiery. Their total capacity however was not sufficient to meet the full requirements of the army and consequently their supplies had to be supplemented by large imports from home. The bulk of the wool used by the Indian mills is Indian wool although it is supplemented to some extent by the importation of merinos and cross breeds from Australia for the manufacture of the finer classes of goods. Their market for manufactured goods is almost entirely in India itself.

Blanket weaving and carpet manufacture are carried on in various parts of the country, notably in the Punjab and the United Provinces. Woollen pile carpets are made in many of the jalkas. Amritsar had a considerable trade at one time in weaving shawls from posh, the fine under fleece of the Tibetan goat, but its place has been taken to some degree by the manufacture of shawls from imported worsted yarns but more generally by the manufacture of carpets of a fine quality which find a ready sale in the world market. This work is done entirely on hand looms and the carpets fetch a high price.

Bibliography.—Notes on wool in India. By A. H. Silver and J. K. Mehta, Govt Press, (Calcutta) (1912).

Silk.

In the early days of the East India Company the Indian silk trade prospered greatly and various sub-tropical races of the silkworm were introduced. But the trade gradually declined for the following reasons —

In the seventeenth and eighteenth centuries India's chief competitor in the silk trade was the *Levant Company*. Successful efforts, however, were made to acclimatise in Europe one or two races of a temperate worm, procured from China and Japan. When sericulture became part of the agriculture of France and Italy, a quality of silk was produced entirely different from that of India and Turkey and its appearance created a new demand and organised new markets.

All subsequent experience seems to have established the belief that the plains of India or at all events of Bengal are never likely to produce silk that could compete with this new industry. On the lower hills of Northern India on the other hand a fair amount of success has been attained with this (to India) new worm, as, for example, in Dehra Dun and Kashmir. In Manipur it would appear probable that *Bombyx* sort, possibly obtained from China, has been reared for centuries. The caprice of fashion has, from time to time, powerfully modified the Indian silk trade. The special properties of the *kurah* silk were formerly much appreciated but the demand for them has now declined. This circumstance together with defective systems of rearing and of hand reeling and weaving accounts largely for the present depression in the mulberry silk trade of India.

Mulberry feeding worms.—Sir George Watt states that in no other country does the necessity exist so pressing as in India to treat the subject of silk and the silk industries under two sections, *etc.*, *Bombyx* and the domesticated or mulberry-feeding silk worms and *Saturniidae* the wild or non-mulberry feeding worms. In India the mulberry worm (*Bombyx Mori*) has been systematically reared for many centuries, there being six chief forms of it. In the temperate tracts of India various forms of *Morus alba*, (the mulberry of the European silk producing countries), are grown specially as food for the silkworm. This is the case in many parts of the plains of Northern India, Baluchistan, Afghanistan, Kashmir and along the Himalaya at altitudes up to 11,000 feet. The other species even more largely grown for the Indian silkworm is *M. indica* of which there are many distinctive varieties or races. This is the most common mulberry of Bengal and Assam as also of the Nilgiri hills.

India has three well-known purely indigenous silkworms the *tassar* the *muga* and the *eri*. The first is widely distributed on the lower hills more especially these of the great central tableland and feeds on several jungle trees. The second is confined to Assam and Eastern Bengal and feeds on a laurel. The third exists in a state of semi-domestication, being reared on the castor-oil plant. From an art point of view the *muga* silk is the most interesting and attractive and the cocoon can be reared readily. The *eri* silk, on the other hand, is so extremely

difficult to reel that it is nearly always carded and spun—an art which was practised in the Khasi Hills of Assam long before it was thought of in Europe.

Experiments and results.—Numerous experiments have been made with a view to improving sericulture in India. French and other experts are agreed that one of the causes of the decline of the silk industry in India has been the prevalence of diseases and parasites among the worms, the most prevalent disease being pebrine. M. Lafont, who has conducted experiments in cross breeding, believes that improvement in the crops will be obtained as soon as the fight against pebrine and other diseases of the worms is taken up vigorously by the producers of seed and the rearsers of worms while improvement in the quality of the cocoons will be obtained by rearing various races pure and cross breeds.

In Kashmir and Mysore satisfactory results have been obtained. In the former State sericulture has been fostered on approved European principles with Italian reeling machinery seed being imported annually on a large scale. In 1897 in Mysore Mr. Tata, after selecting a plantation and site for rearing houses sent to Japan for a Superintendent and trained operatives. The Mysore authorities have made a grant of Rs 3,000 a year to the Tata firm in return for instruction given to the people of Mysore in Japanese methods of growing the mulberry and rearing the insects. The products of the Mysore State are exported to foreign countries from Madras. The work of the Salvation Army is also noteworthy in various parts of India. They have furnished experts encouraged the planting of mulberry trees, and subsidised several silk schools. The draft prospectus has been issued of a silk farm and institute to be started at Shinala under the auspices of the Salvation Army. The Lieut. Governor of the Punjab has permitted the school to be called after his name and the Punjab Government made a grant of Rs 2,000 towards the expenses. Sir Dorabji Tata has also made a donation of Rs 1,000. The Bengal Silk Committee under the guidance of some French experts have conducted cross breeding experiments with a view to establish a multi voltine hybrid of European quality. There is a Government sericultural farm at Berhampore where it is said, a pure white multi voltine of silk worm is reared. The results of the Bengal Committee's labours may be summarised as follows: the only really effective method of dealing with the problem is to work up gradually to a point at which the whole of the seed cocoon necessary for the province will be supplied to rearsers under Government supervision and to establish gradually a sufficient number of large nurseries throughout the silk districts of the province.

In 1915 there was issued by the Agricultural Research Institute, Pusa, a *Bulletin* (No. 48 of 1915) entitled *First Report on the Experiments carried out at Pusa to improve the Mulberry Silk Industry*. In a short *Prognostic note* Mr. Bainbridge Fletcher (Imperial Entomologist)

logist) explains that the object of the Bulletin is to place on record some of the more important experiments which were commenced at Pusa in the year 1910 and have since been carried on in the endeavour to fix a superior multivoltine race of the Mulberry Silkworm which would not degenerate and which would yield silk better both in quality and output than that supplied by the multivoltine races which are reared at present.

Central Nurseries.—The report of the Agricultural Department, Bengal for the year ending June 30 1913, gives an account of a scheme which has been devised with the object of reclaiming the silk industry. The aim of the scheme is gradually to establish throughout the silk districts a sufficient number of central nurseries with rearing houses and thus enable the whole of the seed cocoons required in the province to be supplied under Government supervision. It is believed that this is the only really effective method of dealing with the problem. A number of the existing smaller nurseries were closed during 1912 and others are being converted into enlarged and improved central nurseries with rearing houses complete. The ultimate success of the scheme depends largely on the willingness of the rearers to pay an adequate price for pure seed.

A pamphlet was published in 1912, by Mr M. N. De Sericultural Assistant at Pusa which contains practical hints on improved methods which are recommended to be used for reeling mulberry silk in Bengal and other silk producing districts. It has been found that by the provision of two small pools to the ordinary Bengal type of reeling machine superior thread can be obtained the cost of the extra apparatus is merely nominal (five or six annas per machine) whilst the suitability of the machine for cottage workers is maintained. By attention to such simple points as the stifling and storage of cocoons and the temperature and quality of the water used in the reeling pans great improvements can be effected in most silk centres in Bengal and other districts.

Exports of Silk.—As a result of the war the trade has shown in some degree signs of revival from its decadent condition both as regards its volume and value. The value of exports during 1912-13 improved by Rs. 12 lakhs to Rs. 27½ lakhs of which raw silk accounted for Rs. 24 lakhs. In 1913-17 the total exports rose to Rs. 54½ lakhs. In 1926-27 exports of raw silk amounted to Rs. 82 lakhs and of silk manufactures nearly Rs. 3 lakhs.

Indigo

Indigo dyes are obtained from the *Indigofera*, a genus of Leguminosae which comprises some 300 species distributed throughout the tropical and warm temperate regions of the globe. India having about 40. Western India may be described as the headquarters of the species, so far as India is concerned 25 being peculiar to that Presidency. On the eastern side of India, in Bihar, Bengal, Assam and Burma there is a marked decrease in the number of species but a visible increase in the prevalence of those that are met with.

There is evidence that when Europeans first began to export the dye from India it was procured from the Western Presidency and shipped from Surat. It was earned by the Portuguese to Lisbon and sold by them to the dyers of Holland, and it was the desire to obtain a more ample supply of dye stuff that led to the formation of the Dutch East India Company and so to the overthrow of the Portuguese supremacy in the East. Opposition to indigo in 17th century Europe was keen owing to its interference with the wool industry, but it was competition to obtain indigo from other sources than India that led to the first decline of the Indian indigo industry. In the middle of the eighteenth century when the cultivation of indigo in the West Indies had been given up—partly on account of the high duties imposed upon it and partly because sugar and coffee were found to be more profitable—the industry was revived in India, and, as one of the many surprises of the industry, the province of Bengal was selected for this revival. It had no sooner been organised, however, than trouble next arose in Bengal itself through

misunderstandings between the planters, their cultivators and the Government which may be said to have culminated in Lord Macaulay's famous *Memoirs* of 1837. This led to another migration of the industry from Lower and Eastern Bengal to Tirhut and the United Provinces. Here the troubles of the industry did not end, for the researches of the chemical laboratories of Germany threatened the very existence of any natural vegetable dye. They first killed the madder dye of Europe, then the safflower, the lac and the *ol* dyes of India, and are now advancing rapidly with synthetic indigo intent on the complete annihilation of the natural dye. Opinions differ on many aspects of the present vicissitude, meantime the exports from India have seriously declined, and salvation admittedly lies in the path of cheaper production both in cultivation and manufacture. These issues are being vigorously faced and some progress has been accomplished, but the future of the industry can scarcely help being described as of great uncertainty. The issue is not the advantage of new regulations of land tenure but one exclusively of natural versus synthetic indigo. (See "Vat" Commercial Products of India.) In this connection it may be noted that increases in the price of coal in England due to labour difficulties have greatly strengthened the position of natural indigo. In February 1915 a conference was held at Delhi when the possibility of assisting the natural indigo industry was considered from three points of view—agricultural, research and commercial. The agricultural or botanical side of the question is fully discussed by Mr and Mrs Howard of Pusa in *Bulletins* Nos. 51 and 54 of

the Agricultural Research Institute. Other aspects of the question were fully examined last year in the *Agricultural Journal of India* by Mr W. A. Davis, Indigo Research Chemist to the Government of India. An Indigo Cess Bill was passed in the Imperial Legislative Council in 1918. It provides for a cess on indigo exported from India for the scientific investigation of the methods of cultivation and manufacture of indigo the proceeds of the cess being received and expended by Government.

Decline of the Industry—Since synthetic indigo was put upon the market in 1897 the natural indigo industry of India has declined very rapidly. Apart from slight recoveries in 1906-07 and 1911-12, the decline continued without a break until the revival due to the impossibility of obtaining artificial dyes in sufficient quantities during the war.

In 1926-27 the total yield of indigo was estimated at 20,000 cwts on an area of 100,400 acres. The exports (18,000 cwts) were valued at Rs 4½ lakhs.

OILS AND OIL CAKES

The exports of oilseeds showed a large decrease of 48 per cent in quantity from 1,200,000 tons in 1925-26 to 838,000 tons in 1928-29, while in value there was a drop of 36 per cent from Rs 29.64 lakhs to Rs 19.09 lakhs. Oilseeds rose to the fifth place in order of importance in India, export trade and were far behind tea (Rs 29.04 lakhs) which occupied the fourth place in the year under review, the first three being jute, cotton (raw and manufactured) and food grains. The Indian export trade is suffering from the growing competition of other producing countries. In 1926-27 difficulties were accentuated by the fact that the British oilseed crushing and vegetable oil industry had a trying year owing to the general industrial dislocation brought about by the coal strike and was able to take only a much smaller share of the Indian exports. It has also to be remembered that the Indian home market is absorbing a much larger share of production than before. All the principal varieties of Indian oilseeds recorded decreases. The following table shows the quantities of the principal seeds exported during the past two years and the pre-war quinquennium.

Pre war	average 1915-26	1926-27
	Thousands of tons	
Linseed	3.4	808
Rape seed	2.7	111
Groundnuts	2.2	4.5
Castor	1.14	110
Cotton	1.40	197
Sesamum	1.19	40
Copra	.91	~
Others	.80	28
Total	1453	1250
		838

A pamphlet on the subject recently published by the Commercial Intelligence Department points out that it is both economically and industrially unsound for India to export her oil seeds instead of manufacturing the oils and oil cakes in India. It allows other countries to reap the manufacturers' profits and at the same time deprives Indian agriculture of the great potential wealth, as cattle-food and manure, contained in the oil cakes. An immense quantity of oil is, as a matter of fact, already manufactured in this country by more or less crude processes. Village oil mills worked by bullocks and presses worked by hand exist in all parts of the country and supply most of the local demand for oil. There has also been a great

increase in recent years in the number of oil mills worked by steam or other mechanical power. These crush all the commoner oil seeds and development has been especially marked in the case of mustard oil, castor oil and groundnut oil. In spite of all this there has been a perceptible diminution in the export of oil from India, particularly of coconut oil and linseed oil and an increase in the export of oil seeds, which is particularly marked in the case of copra and groundnuts. The situation created by the War has naturally led to too much discussion of the possibility of developing on a large scale the existing oil milling industry in India.

There are three difficulties with which any proposal to develop in India an oil milling industry on a great scale is faced. In the first place there exist high protective tariffs in European countries which encourage the export from India of the raw material rather than the manufactured product. Secondly there is a better market for the oil cake in Europe than in India and the freight on oil seeds is less than the freight on cake. Thirdly it is much easier and less expensive to transport oil seeds by sea than it is to transport oil. While this has been the position in the European markets, Indian-made oils other than coconut oil have made enough headway in Eastern markets to suggest the possibility of a development of those markets.

The problem of finding a market for oil cakes is equally important. The value of oil cakes is much better appreciated in Europe than in India. The Indian cultivator is prejudiced against the use of machine-made cake as a cattle food or as manure because he considers that it contains less oil and therefore less nourishment than the village-made cake. He is therefore unwilling to buy it except at a reduced price. His prejudices on this point have no justification in fact since experts are agreed that mill cake is a better food for cattle than village-made cake. Even when the mill cake contains less oil than the village cake, there is still more oil in the cake than cattle can digest. The excess of oil in the village cake, where it exists, is a drawback and not an advantage to the use of the cake as food. A considerable amount of demonstration work has been done by the Agricultural Departments of Government in order to remove the cultivator's prejudices and there is said now to be an increasing demand for most classes of mill cake.

Tea

Tea cultivation in India is chiefly in Assam, Bengal and Southern India, the cultivation elsewhere being comparatively unimportant. The total production of tea in India was estimated at 393 million lbs. in 1926 as compared with 364 million lbs. in 1925 and 375 million lbs. in 1924. Assam contributed 62 per cent, Northern India (excluding Assam) 25 per cent, and Southern India 13 per cent the same as in the preceding year. The statement below shows the development of the industry during the past years.

	1922	1923	1924	1925	1926
ACREAGE	Acres	Acres	Acres	Acres	Acres
Assam	412 100	411 900	413 700	416 100	420 600
Rest of Northern India	203 000	203 100	204 400	211 200	213 000
Southern India	92 900	95 700	97 000	100 000	106 100
Total	708 000	711 200	715 100	727 300	739 700
PRODUCTION	lbs (1 000)	lbs (1 000)	lbs (1 000)	lbs (1 000)	lbs (1 000)
Assam	199 965	237 601	231 100	221 185	241 982
Rest of Northern India	75 126	96 006	91 311	99 017	94 804
Southern India	36 548	41 799	40 702	48 705	51 132
Total	311 639	375 406	363 113	368 907	392 918

Exports during the same years were as follows —

Exports of tea by sea to foreign countries

	1922-23	1923-24	1924-25	1925-26	1926-27
	lbs (1 000)	lbs (1 000)	lbs (1 000)	lbs (1 000)	lbs (1 000)
From Northern India (Calcutta and Chittagong)	293 30	280 775	299 74	280 04	301 05
From Southern India (Madras ports)	30 386	38 560	37 517	43 133	41 935
From Bombay, Sind and Burma	4 114	3 417	2 643	2 516	1 372
Total	327 800	322 752	340 874	325 693	344 357

Exports during 1926-27 increased by 7 per cent both in quantity and value as compared with the exports in 1925-26 and amounted to 349 million lbs valued at Rs 29 crores as compared with 322½ million lbs valued at Rs 24 crores in the preceding year. The United Kingdom took 230 million lbs of black tea valued at Rs 24½ crores as against 270 million lbs valued at Rs 23½ crores in the previous year. She also took 3,200,000 lbs green tea as compared with 1,800,000 lbs in 1925-26. More than 84 per cent of the exports went to the United Kingdom whereas in 1925-26 her share had been nearly 86 per cent. The re-exports of Indian tea from the United

Kingdom however decreased in 1926-27 to 45 million lbs from 52 million lbs in 1925-26 of which 17½ million lbs were shipped to the Irish Free State, 13½ million lbs to the Continent of Europe, 5 million lbs to the United States and 4 million lbs to Canada, Australia, Japan and Ceylon. Demands increased from 6 to 4 million lbs and the exports to Mesopotamia from 3 to 3½ million lbs. Ceylon took 4,171,000 lbs as compared with 3,427,000 lbs. Persia took nearly 6 million lbs as compared with 3 million lbs. In the preceding year while sale to Russia declined to only 100,000 lbs as compared with more than 2 million lbs in the previous year.

EXPORTS AND PRICES

The following table shows the quantity of Tea exported by sea and by land to Foreign Countries from India, Ceylon, China, and Java in the years 1908-09 to 1926-27 with variations in index numbers taking the figure of 1906-07 as 100; —

	India	Ceylon	China			Java
	lbs	lbs	Black and green	Brick table and dust	lbs	lbs
1898-99	158 539 488 (106)	122 305 518 (111)	147 067 200 (91)	68 017 067 (87)	25 860 156 (100)	
1900-01	177 163 999 (118)	129 061 908 (118)	153 669 067 (95)	71 20 067 (91)	27 453 019 (107)	
1901-02	18 390 053 (128)	140 264 003 (118)	144 2 70 033 (90)	52 190 067 (86)	29 289 402 (114)	
1902-03	18 514 956 (121)	144 275 608 (121)	119 390 000 (74)	42 740 533 (54)	30 679 041 (143)

Consumption of tea in India

As already explained the reported figures of production are not strictly accurate and consequently any estimate of the consumption per capita in India as a whole is vitiated at the outset. A further difficulty in estimating consumption has arisen on account of the discontinuance from the 1st April 1925 of the old system of registering land frontier traffic and the introduction in its place of a system of registering the traffic only at selected railway stations adjacent to the frontier routes. In estimating the consumption of tea in 1926-27 the assumption was made that the trade by land across the frontier was the same as in the preceding year.

The quantity available for consumption in 1926-27 has been worked out by neglecting the

land trade figures, in other words the net export or import figure of frontier trade is not likely to affect the estimate appreciably, especially when the consumption figure is expressed in millions of lbs. In deducting net exports by sea in 1926-27 and the stocks left at the end of the year from the production in 1926-27 the quantity available for consumption in 1926-27 works out to 48 million lbs. The figures for the preceding nine years are stated below.

	Million lbs	Million lbs
1926-27	48	44
1925-26	44	30
1924-25	47	50
1923-24	49	42
1922-23	51	42

* Owing to the discontinuance of the old system of registration of land frontier trade with effect from 1925-26 the land trade figures of the preceding year have been repeated while working out the figure of net exports.

Quantity of Indian Tea exported by sea* (distinguished according to countries of final destination) and by land in the years 1921-22 to 1926-27

* including shipments from the State of Travancore

(a) Tea consigned from British India to Ceylon is almost entirely transhipped at Colombo to other countries and does not therefore appear in the Ceylon Customs Returns as imports into Ceylon.

(b) Exclusive of the exports from the North West Frontier Province for the months July 1925 to February 1926, for which returns were not received. Includes Mesopotamia.

† These figures are not strictly comparable with the previous figures as they represent all the trade registered at selected railway stations adjacent to the land frontier though a fair portion of them is frontier trade. The old system of registration of frontier trade by means of clerks posted on the important trade routes across the frontier has been discontinued from 1st April 1925. The figure for 1925-26 excludes exports from Burma.

Coffee.

The history of the introduction of coffee into India is very obscure. Most writers agree that it was brought to Mysore some two centuries ago by a Mahomedan pilgrim named Baba Budan, who on his return from Mecca brought seven seeds with him. This tradition is so universally believed in by the inhabitants of the greater part of South India, that there seems every chance of its being founded on fact. About the beginning of the 19th century there is no doubt coffee had found its way to India, and in 1823 a charter was granted to Fort Gloster near Calcutta, authorizing it to become a cotton mill, a coffee plantation and a rum distillery. Some of the coffee trees planted in fulfilment of that charter are supposed to be still alive, and about the same time coffee was successfully grown in the Botanic Gardens, Calcutta, but the industry of coffee planting nowhere found an abiding place on the plains of India but migrated to the hills of South India, in Mysore more especially and thus into the very region where tradition affirms it had been introduced two centuries previously.

The first systematic plantation was apparently Mr. Cannon's near Chikmagalur. This was established in 1880. It is supposed, however, that Major Bevan may have actually grown coffee on the Wynad at a slightly earlier date and that Mr. Cockburn's Shevaroy plantation bears the same date as Mr. Cannon's. In 1840 Mr. Glasen formed a plantation at Manantoddy, and in 1846 plantations were organised on the Nilgiri hills.

The Position of the Industry.—The statistics for 1926-27 show that the number of plantations in the year was 330, covering an area of 340 acres as against 443 plantations with an area of 2,940 acres in 1925-26. New land planted with coffee in these plantations during the year amounted to 6,281 acres while the area of old cultivation abandoned was 16,637 acres. There was thus net increase of 28,54 acres over the total area (148,841 acres) under coffee in 1925-26. The total area under cultivation in 1926-27 was therefore 1,76,581 acres which was two per cent over the area of the preceding year. Of this Mysore accounted for 55 per cent, Coorg and Madras 32 per cent each and Cochin and Travancore together 2 per cent.

The total reported production of cured coffee during the year was 31,20,406 lbs. as compared with 22,10,671 lbs. in the preceding year.

Labour.—The daily average number of persons employed in plantations during 1926-27 was returned at 43,841 of whom 57,619 were permanently employed (namely garden labour 41,082 and outside labour 16,037) and 1,06,621 temporarily employed (of which labourers 85,000

pared with 42,388 persons (36,252 garden and 16,931 outside labour) permanently employed and 29,785 temporary outside labour in 1925-26.

Exports.—The total exports of coffee decreased steadily from 24,000 cwts in 1924-25 to 205,000 cwts in 1925-26 and to 1,00,000 cwts in 1926-27. The principal destinations of Indian coffee were as usual the United Kingdom and Japan, and shipments to these countries fell from 73,484 and 44,854 cwts to 49,448 and 23,977 cwts respectively. Of the other European countries Norway and Belgium took less but Germany and the Netherlands increased their taking from 14,200 and 13,000 cwts to 16,000 and 13,000 cwts respectively. Shipment to Mesopotamia, Arabia, Falkland Islands and Australia also showed decreases.

Exports of Coffee

	Cwts.

1924-25	242 000
1925-26	205,000
1926-27	150 000

The pre-war average value of the coffee exports was Rs. 79,17,000. In 1925-27 the exports were valued at Rs. 1,83 lakhs.

INDIAN TOBACCO

The tobacco plant was introduced into India by the Portuguese about the year 1605. As in other parts of the world it passed through a period of persecution but its ultimate distribution over India is one of the numerous examples of the avidity with which advantageous new crops or appliances are adopted by the Indian agriculturist. Five or six species of *Nicotiana* are cultivated but only two are found in India, namely *N. Tabacum* and *N. Rustica*. The former is a native of South or Central America, and is the common tobacco of India. About the year 1829 experiments were conducted by the East India Company towards improving the quality of leaf and perfecting the native methods of curing and manufacturing tobacco. These were often repeated and gradually the industry became identified with three great centres namely (1) Eastern and Northern Bengal (more especially the District of Rangpur) (2) Madras (Trichinopoly, Dindigul, Coconada and Calcutt in Southern India) and (3) Rangoon and Moulmein in Burma. Bengal is the chief tobacco growing Province but little or no tobacco is manufactured there. The chief factories are near Dindigul in the Madras Presidency; though, owing to the imposition of heavy import duties on the foreign leaf used as a cigar wrapper some cigar factories have been moved to the French territory of Pondicherry.

The question of improving the quality of Indian tobacco has received the attention of the Botanical section of the Agricultural Research Institute Pusa, and three Memoirs have been published recording the results of investigations in that direction. The immediate problem at Pusa is the production of a good cigarette tobacco. Many attempts have been made in the past to introduce into India the best varieties of cigarette tobacco from America, but the results have been disappointing. It is now hoped to build up by hybridization new kinds of tobacco suited to Indian conditions of growth which possess in addition the qualities necessary to obtain a better price.

Area under Cultivation.—The cultivation of tobacco is very widespread in Burma. The two main varieties are called "Burmese tobacco" and "Havana tobacco." Of the Burmese tobacco there are two main varieties "Seywet-gyi," the large-leaved variety and "Seywet-gyan," a smaller leaved variety with pointed leaves. The former yields a heavier crop but the latter gives better quality. There is always a great demand on the market for both the Havana and the Burma tobacco. The smooth leaves of the Havana plant are used for the wrappers and the coarser Burmese leaf for the filling.

The most important tobacco tracts in British India are —(1) the Comillatore and Dindigul

tract of Madras, where the *Uai Kappai* and *Wara Kappai* varieties are largely grown, the former supplying the Trichinopoly cigar (iii) the Godavari Delta of Maliras (iv) the Rangpur tract of Bengal, (v) the Districts of Bihar and Orissa (vi) Guzerat in Bombay and (vii) the delta tract of Burma.

The season for harvesting varies in different localities ranging from December to June but the bulk of the crop is harvested during the months of February, March and April. The leaves when quite dry are assorted and placed in heaps in stacks to ferment. They are then tied into bundles of 25 or 30 a useless leaf being employed for tying each bundle. The leaves are laid perfectly flat the bundles being fan shaped. In this condition they are baled the broom like ends projecting outwards. By varying the degree of fermentation of the leaves different qualities of tobacco are obtained. A black variety is used in India for pipe tobacco and this is the most common product, but a certain amount of yellow leaf is grown for cigar making.

Small Holding Crop.—The area under tobacco in British India is always well above the million acre line and there are some 100,000 acres in the Indian States. The output varies according to the attention given to the crop from 200 lb to as much as 3,000 lb of cured leaf per acre. The long-established Indian theory has been that the crop is suited only to small holdings as it requires considerable attention and liberal manuring. But these latter conditions are the history of the Assam tea industry shows are not necessarily a bar to large plantations and organized production. The possibilities in this direction have been little explored largely because cultivation in small holdings was current when British influence was established in India whereas the cultivation of tea owes its introduction entirely to British enterprise. The great bulk of the tobacco grown in the country disappears in local consumption, but the export trade is developing.

Export Trade.—The Exports of unmanufactured tobacco in 1925-26 amounted to 37 million lbs valued at Rs 105 lakhs.

Since the duty in England is charged by weight and not by value India, as an exporter of the relatively cheaper grades has to pay more duty in proportion than some foreign countries. But the higher degree of preference she will now enjoy will provide a substantial set off and at the same time stimulate the efforts being made to raise the quality of production. Another factor in the same direction is the effect of the heavier import duties on tobacco shipped to India and the consequent tendency of middle-class and other consumers to find satisfaction in the homegrown article.

The Cocaine Traffic

The form of cocaine chiefly used in India is Cocaine Hydrochloride. This salt forms light shining crystals with a bitterish taste and is soluble in half its weight of water. The alkaloid cocaine—of which this is a salt—is obtained from the dried leaves of the *Erythroxylon* Cocaine which grows in Bolivia, Peru, Java, Brazil and other parts of South America. The leaves are most active when freshly dried and are much used by the Natives as a stimulant. Tea made from them has a taste similar to green tea and is said to be very effectual in keeping people awake. In India the Coca plant seems never to have been cultivated on a commercial scale. It has been grown experimentally in the tea districts of Ceylon, Bengal and Southern India and has been found to produce a good quality and quantity of cocaine. As the plant has not been seriously cultivated and as there is no possibility for the present of the drug being manufactured in India, no restrictions have as yet been placed on its cultivation.

Spread of the habit.—The cocaine traffic in India which seems to be reaching alarming proportion in spite of regulation and strict preventive measures is of comparatively recent growth, though it is impossible to estimate how widespread it was in 1903 when the Bombay High Court for the first time decided that cocaine was a drug included within the definition of an intoxicating drug in the Bombay Abkari Act. Since that date the illegal sale of cocaine in India has largely increased and the various provincial Excise Reports bear witness to the spread of the "Cocaine habit." The consumers of the drug, which is notoriously harmful, are to be found in all classes of society and in Burma even school children are reported to be its victims, but in India as in Paris the drug is mostly used by prostitutes or by men as an aphrodisiac. The habit has spread chiefly to those classes which are prohibited by religion or caste rules from partaking of liquor and the well known Indian intoxicating drugs.

Smuggling.—So far as the cases already detected show the persons who smuggle the drug by sea from Europe and places outside India into India, are chiefly sailors, stewards, firemen and sometimes engineers and officers of foreign ships. The ports through which cocaine enters India are Bombay, Karachi (Calcutta, Madras, Marmagao and Pondicherry). The main inland distribution centres are Delhi, Lucknow, Meerut, Lahore, Multan, Surat and Ahmedabad. Delhi especially is notorious for the cocaine trade. Great ingenuity is employed in smuggling cocaine through the Customs houses. It is packed in parcels of newspapers, books, toys and piece goods and in trunks which have secret compartments. The retail trade in the towns is very cunningly organized and controlled. In addition to the actual retailers, there is a whole army of watchmen and pedlars whose duty is to shadow the Excise and Police Officials and give the alarm when a raid is contemplated. During the War

several cases of importation of Japanese cocaine were detected, the importers being Japanese and Chinese sailors. The original marks on the packets and phials are usually destroyed so that the name of the manufacturing firm may not be found out. In 1922 23 the largest seizure of cocaine made by the Excise Department in the Bombay Presidency was one of 10,500 grains, while in 1923 24 a seizure of 24,000 grains was effected. In October 1924 the Excise Department made a seizure of 46,500 grains in a single case.

The Review of the Customs Administration in India 1925 26 contains the following paragraph:

Most of the cocaine seized on import into India appears to have come from the Far East. The biggest seizures during the year were—

825 oz at Rangoon

5 oz at Calcutta

275 oz at Bombay

20 198 and 149 oz at Calcutta

The total amount of cocaine seized by Customs Houses during the year was 3 463 oz.

The amount seized is either given to Hoopstals in India or destroyed. It is no longer possible to buy cocaine from any betelnut seller as it was ten years ago but scores of cases in the Police Courts show that the retail trade thrives, though to a diminished extent in Bombay. High profits ensure the continuance of the trade.

The law in regard to Cocaine.—This varies in different provinces. A summary of the law in Bombay is as follows: No cocaine can be imported except by a licensed dealer and importation by means of the post is entirely prohibited. The sale, possession, transport and export of cocaine are prohibited except under a license or permit from the Collector of the District. A duly qualified and Licensed Medical practitioner is allowed to transport or remove 20 grains in the exercise of his profession and as far as 6 grains may be possessed by any person if covered by a *bona fide* prescription from a duly qualified Medical practitioner. The maximum punishment for illegal sale, possession, transport, etc. under Act V of 1878 as amended by Act XII of 1912 is as follows: Imprisonment for a term which may extend to one year or fine which may extend to Rs. 1,000 or both and on any subsequent conviction imprisonment for a term which may extend to 2 years or fine which may extend to Rs. 4,000 or both. The law in Bombay has been further amended so as to enable security to be taken from persons who have been convicted of cocaine offences. The new Act also contains a section for the punishment of house owners who let their houses to habitual cocaine sellers.

The Opium Trade

Two descriptions of opium must be distinguished *Benares* opium which is manufactured from poppy grown in the United Provinces and *Malwa* opium which is almost entirely produced in certain Native States in Central India and Rajputana.

Benares Opium—Cultivated in the United Provinces and is permissible only under a licence. The cultivator to whom advance of about one third of the total amount eventually due to them are made by Govt free of interest is required to sell the whole of his produce to the Govt at a rate fixed by them now Rs 10 per seer of 700 consistence. The area licensed for cultivation has in recent years been much reduced in 1911-12 it was 250,000 bighas yielding 28,813 maunds of opium and in 1912-13 it stood at 119,691 bighas with an outturn of 14,001 maunds. The crude opium received from the cultivators is sent to the Govt factory at Ghazipur where it is made up into three different forms—(1) for export to the Far East known as *Provision opium* this opium is made up in cakes at 110 consistence 40 cakes weighing 140 lbs being packed in a chest (2) for consumption in India known as *Home opium* This is also made up in cakes at 900 consistence each weighing one seer 60 cake being packed in one chest and (3) Medicinal opium for use in India and for export to the United Kingdom only.

Malwa Opium—The poppy from which *Malwa* opium is manufactured is grown chiefly in the Native States of Indore, Gwalior, Baroda, Ratlam, Jodha, Sitapur, Nwar, Parbhargarh, Bhilawar, Kota and Jank. The British Government has no concern with the cultivation of the poppy or the manufacture of the opium but it has since November 1927 in collaboration with the States, been engaged in investigations directed to the ultimate abandonment by the States of poppy cultivation. The Government is used to regulate before export to China were stopped the import of *Malwa* opium into and the transport through its territories. As the chief market for *Malwa* opium was China and as the States in which the drug is produced had no access to the sea except through British territory the British Government were able to impose a duty on the importation of the drug on its way to Bombay for exportation by sea.

The poppy is sown in November the plants flower in February and by the end of March the whole of the opium has been collected by the cultivators.

Sales of *Malwa* opium for export to China have ceased since January 1918 and the trade has become extinct since 17th December of that year when the last shipment was made. Practically the whole of the *Malwa* opium exported from Bombay went to China.

Revenue—The gross revenue derived by the Government of India from opium in recent years is as follows—

	Rs
1915-16	2,87,07,712
1916-17	3,74,00,073
1917-18	1,61,83,388
1918-19	4,93,98,670
1919-20	4,56,21,212
1920-21	3,53,41,274
1921-22	3,07,44,708
1922-23	3,83,08,088
1923-24	4,44,61,664
1924-25	4,79,76,177
1925-26	4,14,00,781
1926-27	4,31,48,516
1927-28 (Jud. & Estimate)	3,99,18,000

The only countries to which exports are now permitted are the United Kingdom (as regards *medical opium*) and the British Far Eastern Colonies, Siam, French Indo-China and the Dutch East Indies.

Internal Consumption—The internal policy of the Government of India has been and is one of non-interference with the moderate use of raw opium whether the object of the consumer be medicinal or supposed physical benefit or merely the indulgence of the almost universal desire of human beings (particularly those whose occupations involve exposure or severe bodily exertion) for a stimulant or a narcotic. Excessive indulgence has always been suppressed. The total consumption in British India has gone down considerably. It was 60,000 seers in 1912-13 and 29,172 seers in 1925-26 the latest period for which figures are available.

Agreement with China—The fluctuations in the revenue derived from opium are directly attributable to the trade conditions arising out of the limitation of opium exports. In 1907 being satisfied of the genuineness of the efforts of the Chinese Government to suppress the habit of consuming opium in China, the Government of India agreed to co-operate by gradually restricting the amount of opium exported from India to China. In 1908 an arrangement was concluded by which the total quantity of opium exported from India was to be reduced annually by 5,100 chests from an assumed standard of 87,000 chests. Under a further agreement signed in May 1911 the creation of the trade was to be accelerated on evidence being shown of the suppression of the native production of opium in China and in accordance with this agreement a further limitation was placed on exports to Chinese ports. The reduction of exports led to an increase in the price of the drug in China and a corresponding rise in the price obtained in India at the auction sales. For some considerable time however in 1912 the trade in China was paralysed by the imposition by Provincial Governors in defiance of instructions from the Central Government of restrictions on the importation and sale of Indian opium. Stocks accumulated

rapidly at Shanghai and Hongkong and its position in December 1912 had become so acute that a strong and influential demand was made on the Government of India to relieve the situation by the suspension of sales. Sales were accordingly postponed both of Benares and Malwa opium and in order to afford the Malwa trade the most complete relief, the Government of India undertook to purchase for its own use 11,253 chests of Malwa opium which remained to be exported in 1913. The present position in the market is that the export trade to China has ceased since 1913. But these details are now of historical importance only.

Exports—Since April 1926 the public auctions at Calcutta have been discontinued and no opium is exported to the Far East except by Govt. to the Govt. of the importing country under a direct sales agreement. The exports are covered by a certificate from the importing Govt. that the opium is required by them for legitimate purposes and will not be re-exported. In 1926 the Govt. of India also decided to extinguish exports to the Far East progressively in 10 years ending December 31st 1942 except for strictly medicinal or scientific purposes. Number of chests exported has fallen from 34,827 in 1911 to 8,115 in 1926.

GLASS AND GLASSWARE.

The total value of the glass and glassware imported into India in 1925-26 amounted to Rs. 2,09 lakhs compared with Rs. 280 lakhs in the previous year. The imports of glassware in India are showing an upward tendency they being in 1915-16 over Rs. 246 lakhs in value 1% over the quinquennial average of Rs. 181 lakhs Austria Hungary and Germany before the outbreak of the war exported bangles, beads, bottles funnels chumneys and globes etc. to the value of Rs. 116 lakhs in 1913-14. The value of average imports from the enemy countries during the five pre-war years was Rs. 93 lakhs or about 5% of the trade. With their disappearance from the Indian market imports from Japan increased to 71 from 8% the pre-war average. United Kingdom increased her shipments of sheet and plate glass which before 1914 came largely from Belgium. Japan however could not meet the Indian demand and hence renewed and pioneer efforts were made in India to satisfy the needs of the Indian consumer. After the war imports from what was the Dual Monarchy quickly revived.

Manufacture of Glass in India—Glass was manufactured in India in centuries before Christ and Pliny makes mention of "Indian Glass" as being of superior quality. As a result of recent archaeological explorations, a number of small crude glass vessels have been discovered indicative of the very primitive stage of the industry. But no further traces of ancient Indian Glass Industry as such survive yet, it is certain that by the sixteenth century it was an established industry producing mainly bangles and small bottles. The quality of the material was inferior and the articles turned out were rough. Beyond this stage the industry had not progressed until the nineteenth of the last century. Manufacture of glass in India on modern European lines dates from the middle of the last century, when some pioneer efforts were made in this line. Since then a number of concerns have been started, a number of them have failed while some are still clinging to life owing to war conditions. They mainly devote themselves to the manufacture of bangles and lampware side by side with bottle making on a small scale. This therefore is the criterion which determines the two well defined classes of the industry in its present stage: (i) Indigenous Cottage Industry and (ii) the modern Factory Industry.

(i) The Indigenous Cottage Industry which is represented in all parts of the country but has its chief centres in Ferozabad District of U. P. and Belgaum District, in the South is mainly concerned with the manufacture of cheap bangle, made from glass cakes or blocks, made in larger factories. The industry is at present in a flourishing state and supplies nearly one-third of the Indian demand for bangles. The quality has been improved by the discovery of new glazing processes and for the present the turnover in this line has gone up to 20 lakhs of rupees a year. But these bangles have now to face a very hard competition from Japan whose silky "bangles" are ousting the old type Indian ones.

(ii) The modern Factory type of organization of this industry is just in its infancy at present. The existing factories either stop at producing glass cakes for bangle as in Ferozabad or simple kind of lampware and bottles. With the existing state of knowledge and machinery in India they can neither produce sheet and plate glass, nor do they pretend to manufacture laboratory or table glass. Artistic glassware is out of the question and the private capitalists who have to run their concerns mostly with commercial ends do not think it worth their while to spend money and labour on it. War caused a great decrease in volume—though not so much in value which was much increased—of the imports of the lampware etc. and in order to meet the Indian demand for them new factories were started and old revived which produced only cheap and simple kind of lampware and bottles on small scale. The total production of these Indian Glass Works has not been exactly estimated but it is generally supposed that they were able to meet in these war years nearly half the Indian demand for this kind of glassware. There are at present 14 factories engaged in the production of lampware, of which two or three only produce bottles and carboys also. The chief centres for the former kind are Bombay, Jubbulpore, Allahabad, and Bijnor and Ambala, while bottles are only manufactured at Naini and Lahore and recently at Calcutta.

During the latter years of the war period a number of Glass Works were opened in the Bombay Presidency and adjoining districts, local manufacture having been stimulated by the cessation of imports of German, Austrian and Belgian glass.

Causes of failure—Records of the earlier ventures have shown that the failures in some cases were due in part at least to preventable causes prominent among which were (1) Lack of enlightened management (2) Lack of proper commercial basis, as in some cases the proprietors had a number of other more larger concerns to look to (3) Bad selection of site. An ideal site for a Glass Factory would be determined by the (a) nearness of quartz and fire clay, (b) nearness of fuel, and (c) by the nearness of market. At least two must be present. In some concerns two were absent (4) Specialisation was lacking some factories in their initial stages trying to manufacture three or four different kinds of glassware simultaneously like lampware bottles and bangles etc. (5) Paucity of sufficient fluid capital for initial expenses for machinery or other improvements or even in some cases for running the concern in the beginning

But beyond these there are certain real and special causes that contributed to the failure of some of three and hinder the progress of the rest. Chief among them are (1) The industry is in its infant stage and hence such failures are but incidental (2) No expert guidance in this line there is a lack of men and good literature (3) Paucity of skilled labour of higher type. The present Indian workmen in this line and blowers are few in number and illiterate. They therefore, master the situation and are unamenable to management (4) Heavy cost of good fuel, the works usually being situated where good sand and quartz can be obtained and consequently in most cases, at a great distance

from the coal fields (5) To a certain extent competition from Japan and other European countries

Alkali used is almost entirely of English manufacture being Carbonate of Soda 98-99% in a powdered form. This Alkali has almost completely taken place of the various Alkaline Earths formerly employed by the Glass Bangle manufacturers as the latter cannot be used in the manufacture of glass which is to compete with the imported article. These points must be carefully noted for future guidance

The industry developed considerably under war conditions but in peace times, in this transition stage immediate efforts must be made in the direction of what the Indian Industrial Commission say in their Report (Appendix E) viz. "The Glass industry even in its simplest form is highly technical and can be efficiently carried on only by scientifically trained managers and expert workmen. The present stage has been reached by importing men, only partially equipped with the necessary qualifications from Europe and Japan, and by sending Indian students abroad to pick up what knowledge they can. The glass industry is a closed trade and its secrets are carefully guarded so that the latter method has not proved conspicuously successful."

WILD BIRDS PLUMAGE

The Bill for prohibiting the importation into England of wild birds' plumage which was introduced into Parliament in 1913 was the occasion of a fierce controversy on the nature of the plumage traffic. Organised opposition to the Bill, although successful in preventing it from becoming law failed to convince the public that the plumage trade was not one of great cruelty. The controversy continued with unabated vigour until May 1921 when an agreement was arrived at between the two parties. The most important clause in the agreement stipulates that within four months of the Bill becoming law an Advisory Committee shall be appointed by the Board of Trade. This Committee will consist of an independent chairman, two expert ornithologists, three representatives of the feather trade and four other independent members. The function of this Committee will be to advise the Board of Trade as to additions to and removals from the existing schedule (cock and elder duck) of birds whose plumage may be imported. The passing of the Plumage Bill will thus place England at east of the United States and of her own daughter Dominions in the suppression of a barbarous industry as all legitimate methods of breeding birds for their plumage will be safeguarded as definite exceptions under the Plumage Bill

Plumage birds—The birds most killed on account of their plumage in India are paddy birds, egrets, kingfishers, bustards, junglefowl, pheasants, partridges, peafowl, hoopoes and rollers. Egrets and rollers (popularly known as

Blue Jaws) are perhaps the birds which have been most extensively killed in the past, and of these egrets have attracted the greatest attention. There are three species met with in India the Large, Smaller and Little Egrets. All three are pure white slim birds which develop during the breeding season a dorsal train of feathers which elongates and becomes "decomposed" as it is expressed that is to say, the barbs are separate and distinct from each other thus forming the ornamental plume or algrete for which these birds are much sought after and ruthlessly destroyed. Thirty years ago the exports were valued at over six lakhs in one year but since 1895 the export trade has steadily diminished. But, though legitimate exports have been stopped the trade is so lucrative as to lead to many attempts at smuggling. Within a recent period of 12 months the Bombay Preventive Department for example seized egret plumage worth Rs. 2,18,047 in India and \$4,000 in London. The rupee value represents the sum which the exporters paid to those who took the feathers from the birds so the loss to the trade was considerable. In addition penalties varying from Rs. 5,000 to Rs. 10,000 each and amounting altogether to Rs. 59,375 were inflicted on the ten merchants concerned in attempting to export the feathers. A case was reported from Rangoon in 1916 of a man being found in possession 22 lbs. of egret feathers valued at Rs. 66,000. Although frequently denied, there seem very little reason to doubt that within the last decade egrets have been successfully bred in capti-

vity by the fisherfolk in the province of Sind. But whether such birds can be bred without cruelty and if so whether the export of their plumage could be legislated without encouraging barbaries in other areas of the peninsula, is a question which can only be decided as a result of a searching and exhaustive inquiry.

Legislation.—Indian legislation on the subject will be studied with interest by those who have followed the course of legislation on this subject in other countries. Until 1887 no legislation was considered necessary in India. An Act of that year enabled local governments and municipal and cantonment authorities to make rules prohibiting under penalties the sale or possession of wild birds recently killed or taken during their breeding seasons, and the importation into any Municipal or cantonment area of the plumage of any wild birds during those seasons, and local governments were empowered to apply these provisions to animals other than birds.

Afterwards, in 1902 action was taken under the Sea Customs Act to prohibit the exportation of the skins and feathers of birds, except feathers of ostriches and skins and feathers exported *bona fide* as specimens illustrative of natural history. Act VIII of 1912 goes much further than

the previous law. It schedules a list of wild birds and animals to which the Act is to apply in the first instance enables local governments to extend this list, empowers local governments to establish close times, presumably during the breeding seasons in the whole of their territories or in specified areas, for wild birds and animals to which the Act applies and imposes penalties for the capture, sale and purchase of birds and animals in contravention of the "close time" regulations and for the sale, purchase and possession of plumage taken from birds during the close time. There is power to grant exemptions in the case of scientific research, and there are savings for the capture or killing by any person of a wild animal in defence of himself or of any other person and for the capture or killing of any wild bird or animal in *bona fide* defence of property.

One defect in the law may be noticed. When an exporter is discovered the Customs Department can on a magistrate's warrant have his house searched and seize the feathers found there to produce as evidence that he is engaged in the trade. But they have to return the feathers and can only take possession of them if they are discovered presently in course of export.

HIDES, SKINS AND LEATHER

India's local manufacture of skins and leather have steadily increased in recent years. Previous to the outbreak of war the trade in raw hides in this country was good, there was a large demand for hides and prices ruled high. While in the continental markets stocks were high owing to overtrading in the previous year the United States had a shortage which was estimated at approximately two million pieces. On the declaration of war the trade which had up till then been brisk was seriously dislocated. Exports to enemy countries especially to the great emporium of Indian hides, Hamburg were stopped and exporters had to find new markets for the raw material. The raw hide business of India it is well known, has hitherto been largely if not quite entirely in the hands of German firms or firms of German origin. Germany has had the largest share of India's raw hides. In the four months before the outbreak of war she took 39 per cent of the total exports. In 1912-13 she took 32 per cent and in 1913-14 35 per cent. Raw hides were exported to Trieste in considerable quantities whence they were taken to Germany or Austria. In the four months before the outbreak of war 15 per cent of India's exports passed through Trieste. In 1913-14 the percentage was 21.

The exports in hides and skins in 1912-13 amounted in value to Rs. 14.55 Lakhs. Shipments of raw hides and skins amounted to 50,52 tons which was only 203 tons less than the exports of the previous year. Fifty-five per cent of the export under this head consisted of

raw hides, which amount to 27,900 tons valued at Rs. 2.77 Lakhs, as compared with 24,400 tons valued at Rs. 3.21 Lakhs shipped in the preceding year.

Conditions of the Trade.—The trade in hides and skins and the craft in leather manufacture are in the hands either of Mohammedans or of low caste Hindus, and are on that account participated in by a comparatively small community. The traffic is subject to considerable fluctuations concomitant with the vicissitudes of the seasons. In famine years for instance the exports of unwanted hides rise to an abnormal figure. The traffic is also peculiarly affected by the difficulty of obtaining capital and by the religious objection which assigns it to a position of degradation and neglect. It has thus become a monopoly within a restricted community and suffers from the loss of competition and popular interest and favour.

No large industry has changed more rapidly and completely than that of leather. By the chrome process for example, superior leather may be produced from the strongest buffalo hides in seven days, from cowhides in twenty-four hours, and from sheep and goat skins in six to eight hours, and these operations formerly took thirty days or as much as eighteen months. Of these changes the native tanners of India were slow to take advantage, but in spite of general backwardness the leather produced by some of the tanneries, especially those under European management, is in certain respects equal to the best imported articles. But since the outbreak of war pre-

cream has been more rapid and considerable quantities of special forms of chrome leather, for which Indian hides are particularly suitable have found a ready market in London.

Protecting the industry.—The report of the Industrial Commission pointed out that the principal difficulty at present in the hides and leather industry was the lack of organisation and expert skill. Government action to foster the industry was first taken in September 1910 when a Bill was introduced in the Imperial Legislative Council further to amend the Indian Tariff Act, 1894. The effect of this Bill was officially described as follows: It is to impose an export duty of 10 per cent on hides and skins with a rebate of 10 per cent on hides and skins exported to other parts of the Empire and there tanned. Its object is to ensure that our hides and skins shall be converted into fully tanned leather or articles of leather so far as possible in India and failing this in other parts of the Empire instead of being exported in a raw state for manufacture in foreign countries. In a raw state for manufacture in foreign countries." Sir George Harney who was in charge of the Bill and described the tanning industry as one of the most promising Indian industries explained that the present position is that we have in India at the present time some hundreds of tanneries for the tanning of hides, a large number of which have come into existence in order to satisfy military requirements during the war. We have in fact the foundations of a flourishing tanning industry but there is reason to fear that it may tend to dwindle and disappear with the diminution of military requirements.

If some other support is not given. We want to keep this industry alive, and we believe that in this case protection in the shape of a 15 per cent. export duty is justifiable and ought to be effective. It is clearly just also that the same measure of protection should be extended to the tanners of skins whose business, as I have already stated, was injured by the necessities of the war. Though Indian tanners have enormously increased in number during the past three years, they can only deal with a comparatively small proportion of the raw hides and skins which India produces, and it is to the advantage of India and the security of the Empire generally that this large surplus should so far as possible, be tanned within the Empire and with this end in view the Bill proposes a 10 per cent. rebate in respect of hides and skins exported to any place within the Empire. I should add that it is proposed to limit by notification the benefit of this rebate to hides and skins actually tanned within the Empire and Indian hides and skins re-exported from an Empire port for the purpose of being tanned abroad will not be entitled to any rebate.

Indigenous methods.—India possesses a large selection of excellent tanning materials such as *Acacia* pods and bark Indian *sumach* the *Tanner's casala*, *Mangroves* and *Myra bolans*. By them and such like materials and by various methods and contrivances, hides and skins are extensively cured and tanned and the leather worked up in response to an immense though purely local demand.

GRAIN ELEVATORS

The question of adopting elevators for the handling of Indian grain has engaged attention for some time and has assumed increased importance in the light of the railway congestion experienced in recent years and more particularly in the grain season. In the last three years great strides have been made by other countries in the adoption or perfecting of the elevator system, and a large mass of contemporary data on the subject has been brought together by the Commercial Intelligence Department. Since the subject is one that can not receive adequate consideration in India till the facts are before the public, these have been embodied in a pamphlet entitled *Indian Wheat and Grain Elevators* by the late Mr. F. Noel-Paton, Director General of Commercial Intelligence to the Government of India. The work gives full particulars regarding India's production of wheat, and shows that less than one-eighth of the crop is exported. It describes the conditions under which the grain is held and the risks that it runs. It is pointed

out that the cultivator has no adequate means of preserving his wheat and that he is constrained to sell at harvest time also that the prices then obtained by him are considerably lower than those usually current in later months. The constant nature of the European demand is explained and an attempt is made to gauge the probability that the enormously increased quantities of wheat to be expected when new irrigation tracts come into bearing would be accepted by Europe at one time and at a good price or could be economically transported under a system in which a few months of congestion alternated with a longer period of stagnation. Figures are given which suggest that in practice the effect of equipping railways to do this is to intensify the evil and so to engage in a vicious circle. The author explains the structural nature of elevators and their functions as constituted in other countries. Particulars are given as to the laws that govern their operations in such countries.

TRADE MARKS.

The Indian Merchandise Marks Act (IV of 1889) was passed in 1889, but its operation in the earlier years was restricted, especially in Calcutta, in consequence of the lack of adequate Customs machinery for the examination of goods. In 1894 with the introduction of the present tariff the Customs staff was strengthened for the examination of goods for assessment to duty, and this increase enabled examination to be made at the same time for the purposes of the Merchandise Marks Act. The Act was intended originally to prevent the fraudulent sale of goods bearing false trade marks or false trade descriptions (as of origin, quality weight or quantity). While the Act was before the Legislature a provision was added to require that piece-goods should be stamped with their length in yards. In this respect these goods are an exception, for the Act does not require that other descriptions of goods should be stamped or marked though it requires that when goods are marked the marks must be a correct description. The number of detentions under the Act during the twenty years

ending 1924-25 has been —

Average of the five years ending	
1907-08	1,198
1912-18	1,960
1917-18	2,416
1922-23	1,840
1924-25	8,331

Detention is but rarely followed by confiscation, and there have been only 64 cases during the past ten years. Usually detained goods are released with a fine, and this procedure was followed in 16,919 cases out of the 27,184 detentions ordered in the same period. In 10,198 cases the detained goods were released without the infliction of a fine. In this period of ten years 9 per cent. of the detentions were on account of the application of false trade marks or false trade descriptions. In 69 per cent. of the cases detention was ordered because the country of origin was either not stated or was falsely stated and in 22 per cent. because the provisions of the Act for the stamping of piece-goods had been infringed.

INDIAN INVENTIONS AND DESIGNS

A handbook to the Patent Office in India which is published by the Government Press, Calcutta, gives the various Acts, rules and instructions bearing on the subject together with hints for the preparation of specifications and drawings, hints for searchers and other valuable information that has not hitherto been readily accessible to the general public in so convenient a form. In the preface the Controller of Patents and Designs explains the scope of the Patent laws in India and indicates wherein they differ from English law and procedure.

The foundation of patent legislation throughout the world lies in the English Statute of Monopolies which was enacted in 1628, the 21st year of King James the First. In part this Act has been repealed, but the extent portion of the more important section 6 is as follows —

Provided also that any declaration before mentioned shall not extend to any letters patent and grants of privilege for the term of fourteen years or under, hereafter to be made of the sole working or making of any manner of new manufactures within this realm to the true and first inventor and inventors of such manufactures, which others at the time of making of such letters patent and grants shall not use, so as also they be not contrary to the law nor mischievous to the State by raising prices of commodities at home, or hurt of trade, or generally inconvenient: the said fourteen years to be accomplished from the date of the first letters patent or grants of such privilege hereafter to be made, but that the same shall be of such force as they should be if this Act had never been made and of none other.

The existing Indian Patent Law is contained in the Indian Patents and Designs Act, 1911 supplemented by the Indian Patents and Designs (Temporary Rules) Act, 1915, and

by the Rules made under those Acts. The Patent Office does not deal with trade mark or with copyright generally in books, pictures, music and other matters which fall under the Indian Copyright Act III of 1914. There is in fact no provision of law in British India for the registration of Trade Marks which are protected under the Merchandise Marks Act (IV of 1889) which forms Chapter XVIII of the Indian Penal Code.

On the whole Indian law and procedure closely follow that in the United Kingdom for the protection of inventions and the registration of designs, as they always have done in matters of major interest. One main difference exists however as owing to the absence of provision of law for the registration of trade marks, India cannot become a party to the International Convention under which certain rights of priority are obtainable in other countries.

The first Indian Act for granting exclusive privileges to inventors was passed in 1856 after an agitation that had been carried on fitfully for some twenty years. Difficulties arising from an uncertainty as to the effect of the Royal Prerogative prevented earlier action and owing to some informalities the Act itself was repealed in the following year. In 1859 it was re-enacted with modifications, and in 1872 the Patents and Designs Protection Act was passed. The protection of Inventions Act of 1883 dealing with exhibitions followed and then the Inventions and Designs Act of 1888. All these are now replaced by the present Act of 1911.

The existing Acts extend to the whole of British India, including British Baluchistan and the Santhal Parganas. This of course includes Burma but it does not embrace the Native States. Of the latter three — (1) Hyderabad (Deccan), (2) Mysore, (3) Gwalior have ordinances of their own, for which particulars must

be obtained from the Government of the States in question as they are not administered by the Indian Patent Office in Calcutta. The object of the Act of 1911 was to provide a simpler more direct, and more effective procedure in regard both to the grant of patent rights and to their subsequent existence and operation. The changes made in the law need not here be referred to in detail. They gave further protection both to the inventor, by providing that his application should be kept secret until acceptance, and to the public, by increasing the facilities for opposition at an effective period. At the same time a Controller of Patents and Designs was established with power to dispose of many matters previously referred to the Governor General in Council and provision was made for the grant of a sealed patent instead of for the mere recognition of an exclusive privilege. The provisions of the Act follow with the necessary modifications those of the British Inventions and Designs Act of 1907.

Important amendments have been made in the Indian Patents and Designs Act since 1911, the most important being the priority given to Indian inventors over others to apply for British patents within 12 months from the date of the Indian application. Similarly an applicant for a British patent has priority over other applicants in India for 12 months from the date of his British application.

Printed Specification of applications for patents, which have been accepted (8 annas per copy) may be seen free of charge together with other publications of the Patent Office at the following places—

Note.—The quinquennial average figures are inserted only for comparative purposes. The progressive total of additions to stock (item 9) and net progressive absorption (item 10) are calculated on the annual figures and are not based on these averages. Item 9 is the sum of the yearly figures in item 5 and item 10 the sum of the yearly figures in item 8.

(a) Includes gold imported and exported on behalf of the Bank of England.

(b) Figures are for calendar year ending 31st December.

The Indian Tariff Board, 1927

Textile Industry—The Special Tariff Board, which was appointed in June 1926 to investigate the causes of the depression in the cotton textile industry and to report whether the industry was in need of protection submitted a report in January 1927 but it was not published until June. The Board found that the depression in the mill industry which commenced in 1923 had affected Bombay much more acutely than any other centre and that throughout India the mills with spinning departments only had with very few exceptions been affected to a greater extent than mills with both spinning and weaving departments.

Causes of the Depression—The suggested causes of the depression were examined under four heads: (i) world factors, (ii) external competition, (iii) causes affecting the Indian cotton textile industry as a whole and (iv) causes special to Bombay. The two world factors which in the opinion of the Board had materially contributed to the depression were the altered relations between agriculture and general prices from 1920 onwards and the course of the prices of American cotton from that year. Under the head external competition the most important findings based on an exhaustive examination of the statistics of Japanese imports of yarn and piece goods into India during the post-war period and of their character were that Japanese yarn of S-2 counts and above and Japanese piece goods of 30s and above were being sold in India at prices which were practically equal to the cost of manufacture alone in India without any allowance for profit or depreciation. In these circumstances the Board held that the competition of Japanese yarn and cloth must be regarded as an important cause of the depression in the mill industry in India. It signified this competition as unfair on the ground that the conditions of labour in Japan were inferior to those in India in respect of the length of the working day and the employment of women and juveniles at night. The advantage derived from the lousier shift working rendered possible by the employment of women and children at night which is prohibited by the Indian Factory Act was placed at 4 per cent on the actual cost of manufacture both of yarn and cloth an advantage which would be considerably in excess of a reasonable return on capital were included in the cost of production. The depreciation of the Japanese exchange from 1924 onwards had stimulated exports from Japan to India whilst it lasted but Japan had ceased to enjoy any special advantage in this respect nor could it be established that Japanese goods were being dumped in India. Amongst the causes of depression which have been suggested as applicable to India as a whole the Board found that over capitalisation of mills could not be included though it had undoubtedly contributed to accentuate the depression in Bombay as had the high dividends paid and the consequent failure to husband resources during the boom period. The use of inefficient machinery was also ruled out as a cause of depression. The managing

agency system was in the main acquitted of responsibility for the existing conditions though certain defects inherent in that system such as undue conservatism and lack of initiative were held to have to some extent contributory to them. The Board's conclusion as regards the stabilisation of the rupee at 1s 8d was that coming as this did at a time of falling prices it had rendered the problem presented by the disparity between prices and wages in the industry somewhat more acute.

Of the causes of the depression which had been suggested as special to Bombay the Board found that the loss of the export trade in yarn with China and the increasing competition of mills in Ahmedabad and other centres were the most important. In the five years before the war the exports of yarn from Bombay represented 53 per cent of the total Bombay mill production. In the five years ending 1923-24 they were only 24 per cent and in 1924-25 they had fallen to 11 per cent. The loss of the trade with China in yarn which had not been compensated appreciably by an increase in the extent of piece goods meant that the Bombay mills had to find an outlet in the home market for the equivalent of 300 million yards of cloth at a time when they were faced with the competition of an additional 400 million yards of cloth manufactured in mills in India outside Bombay. The costs of production in Bombay and other centres were carefully examined and the conclusion reached was that Bombay was under substantial disadvantages as compared with centres in respect of cost of fuel and power cost of water and higher local taxation. These disadvantages however were rather more than set off by advantages in regard to cost of stores or insurance and of office expenses. By far the greatest disability under which the Bombay industry laboured in its competition with mills in Ahmedabad and other centres in India was its high cost of labour.

Remedial Measures—The remedial measures suggested by the Board were discussed under four heads—(i) internal economies (ii) improvements in organisation (iii) changes in the tariff and (iv) statistical other than changes in the tariff. The Board held that the most important direction in which internal economies could be effected was by increasing the efficiency of labour a method which it regarded as greatly to be preferred to a reduction in wages. It made very detailed recommendations as to the ways in which greater labour efficiency could be secured. Other suggestions put forward under this head were that a single hedge contract would lead to economies in the purchase of the raw material that the charge for water used by the mills in Bombay should be reduced and that the town duty of one rupee per bale levied on all cotton consumed in the Bombay mills should be reduced to eight annas. The Board then turned its attention to the organisation of the industry and made suggestions for increasing the efficiency of the Bombay Millowners' Association by the

constitution of strong sub-committees to deal with the various branches of the Association's activities. Improvements in the personnel of the firms of managing agents were recommended. The winding down of the capital in the Bombay mill industry was held to be a matter requiring immediate attention. The most important recommendation under this head was that Bombay should utilize to the full its natural advantages in the matter of climate and situation for the production of goods of higher counts and that the difficulties in the way of its doing so presented by the lack of suitable raw material in India should be overcome temporarily by the greater use of American and African cotton. A great expansion in the Bombay mill production of bleached, coloured and dyed and printed goods was suggested as one remedy for the depression. To this end the Board recommended the establishment by a combination of mills of a large factory for combined printing, bleaching and dyeing in or near Bombay. It further suggested greater attention to the development of the export trade of Bombay and pointed out that that the first essential to such development was that adequate information should be collected regarding conditions in certain large markets in the Near and Far East and that the industry should be in a position to utilise it. In regard to changes in the tariff the Board was unanimous in holding that no justification for an export duty on cotton could be established and that the concession of free entry enjoyed by cotton mill machinery and mill stores prior to 1921 should again be granted. It was further agreed that a moderate measure of protection in addition to that afforded by the existing revenue duty of 5 per cent on yarn and 11 per cent on cloth could be justified for such period as labour conditions in Japan remained inferior to those in India.

The President Mr F. Noyce differed from his colleagues Raja Hari Kishan Kaul and Mr N. B. Subba Rao as to the form in which this protection should be given. The two latter held that a differential duty against Japan was undesirable as was also an all round increase in the duty of yarn owing to its effect on the handloom industry. Their view was that protection to the cotton mill industry should be given in the form of an addition to the existing duty on all cotton manufactures other than yarn. The addition they recommended was 4 per cent and in discussing the form in which state aid could be given other than by changes in the tariff they proposed that the proceeds of the additional duty should be utilised in providing a stimulus to the production of goods of higher quality by the grant of a bounty on the spinning of higher counts of yarn. They therefore recommended that a bounty of one anna per pound or its equivalent should be given on all yarn of 82s and higher counts based on the production of an average of 15 per cent of the total spindleage in mills in British India. The operation of the bounty would be limited to four years at the end of which period the operation of the new Japanese Factory Law would have removed the effect of the unfair competition from that country. It would also be limited to the production of 15 per cent of the spindleage in any one mill and would not be given unless the total spindleage employed on the production of higher counts

exceeded 71 per cent and the average count spun was not below 14s.

Mr Noyce held that this scheme would do nothing to help those mills which had no weaving departments or to solve the greatest problem before the Bombay mill industry that of meeting the increasing competition of other centres. He also considered that the administrative difficulties in working it would prove insuperable. In his view the maximum amount of protection which could be justified was that which would offset the actual advantage per pound of yarn or per pound of cloth manufactured which was derived from double shift working in Japan. He therefore recommended the imposition of a differential duty of 4 per cent on all cotton manufactures imported into India from Japan the duty to continue until the end of the financial year 1929-30.

Although the Board failed to agree in regard to the bounty scheme it was unanimous in its view on other forms of State aid to the industry. It suggested assistance from Government if a satisfactory scheme for a combined bleaching, dyeing and printing plant could be put forward by the Bombay mill industry, the establishment of Trade Commissioners at Basra and Bombay and a rapid survey of the potentialities of the markets in other countries by a small mission consisting of an official and a nominee of the Bombay Millowners Association. It also suggested that the Bombay mill industry should have its own representative in its principal export markets and that an expenditure incurred by the Bombay Millowners Association in this respect should be supplemented for four years by the grant of an equal amount from Government up to a maximum of Rs. 50,000 annually. The question of assisting the industry by subsidising shipping freights was held to be one for investigation by the Trade Commissioners and the Commercial Mission. No justification was considered to exist for the grant of export bounties or the abolition of company super tax. Finally the Board rejected the claim for special treatment of the handloom industry and also that put forward by certain mills using imported yarn for the abolition of the duty on yarn of counts above 40s or for a rebate of the duty on such yarn.

Decision of the Government of India.—The Government of India dealt with the recommendation of the Board so far as these related to changes in the Tariff in a Resolution of the Commerce Department dated June 7th 1927. They accepted Mr Noyce's view that the proposed bounty scheme was impracticable and held that its rejection removed the principal reason advanced by the majority of the Board for a general increase in the import duty on cotton piece goods. They further held that the advantages to Japan resulting from labour conditions which they placed at 10 per cent, a reasonable return on capital were included in the cost of production was more than covered by the existing revenue duty of 11 per cent on cloth and that in these circumstances no additional duty on this account could be justified. The existing duty of 5 per cent on yarn did not fully cover the Japanese advantage but an additional duty was undesirable in view of its prejudicial effect on the handloom industry. The recom-

recommendations of the Board in regard to the duty on machinery and mill stores were accepted in principle, but the Government of India held that differentiation between industries was undisturbable. They therefore decided that the duty on all machinery and on certain mill stores should be remitted.

The decision of the Government of India led to a strong protest from a conference of representatives of the cotton mill industry which met at Bombay in June and by a deputation of millowners which was subsequently received by the Viceroy at Simla. The representations thus made led to a reconsideration of the whole question by the Government of India and on August 18th 1927 they announced that they had come to the conclusion that the cotton spinning industry could fairly claim additional assistance and that they had decided to bring before the Legislature a Bill providing that up to the 31st March 1930 the duty on cotton yarn irrespective of the country of origin should be one and half annas per pound or 5 per cent *ad valorem* whichever was higher. This meant that the specific duty would be leviable on all imported yarn, unless its value exceeded Rs. 1 14-0 per pound in which case it would continue to be 5 per cent *ad valorem*. In order to minimise the burden imposed on the handloom industry by the revised duty the duty on artificial silk which was being used in increasing quantities by handloom weavers and in cotton mills would be reduced from 15 to 7½ per cent. The Government also decided to extend the list of mill stores exempted from duty. Two Acts embodying these decisions were passed at the September session of the Imperial Legislature.

The Government of India have accepted the recommendation of the Tariff Board that a

small Commercial Mission should be deputed to explore the possibilities of certain export markets. Dr D B Meek the Director-General of Commercial Intelligence and Mr T Muloney the Secretary of the Bombay Millowners' Association have been deputed to undertake the investigation.

Miscellaneous Inquiries.—The Indian Tariff Board proper was engaged during the year on a number of miscellaneous enquiries. It took evidence in regard to railway waggons and underframes and their component parts wire and wire nails, bolts and nuts, steel castings, machine belting, printing paper, fly wood and tea chests and matches. The only report published during the year was that on the duties on printing paper. The question referred to the Board was the interpretation of the entry in the Tariff schedule imposing a protective duty of one rupee per pound on printing paper containing less than 65 per cent of mechanical wood pulp. The Government of India had ruled that the percentage of mechanical pulp should be calculated on the total weight of the paper and not merely on the fibre content. The effect of this ruling was to bring within the scope of the duty large quantities of imported newsprint which there appeared reason to believe it had been the intention of the Legislature to exclude when the Muntoo Paper Industry (Protection) Act of 1926 was passed. The Tariff Board reported in favour of excluding from the protective duty printing paper containing no mechanical wood pulp or in which the mechanical wood pulp amounts to less than 65 per cent of the fibre content. Their recommendation was accepted by the Government of India and embodied in an Act passed at the September session of the Legislature.

COPYRIGHT

There is no provision of law in British India for the registration of Copyright. Protection for Copyright accrues under the Indian Copyright Act under which there is now no registration of rights but the printer has to supply copies of these works as stated in that Act and in the Printing Presses and Books Act XXV of 1867. The Indian Copyright Act made such modifications in the Imperial Copyright Act of 1911 as appeared to be desirable for adapting its provisions to the circumstances of India. The Imperial Act of 1911 was brought into force in India by proclamation in the *Gazette of India* on October 30 1912. Under s. 27 of that Act there is limited power for the legislature of British possessions to modify or add to the provisions of the Act in its application to the possession and it is under this power that the Indian Act of 1914 was passed. The portions of the Imperial Act applicable to British areas scheduled to the Indian Act. The Act to which these provisions are scheduled makes some formal adaptations of them to Indian law and procedure, and some material

modifications of them in their applications to translations and musical compositions. In the case of works first published in British India the sole right to produce reproductions, perform or publish a translation is subject to an important proviso to subsist only for ten years from the first publication of the work. The provisions of the Act as to mechanical instruments for producing musical sounds were found unsuitable to Indian conditions. The majority of Indian melodies, it was explained in Council have not been published, i.e., written in staff notation, except through the medium of the phonograph. It is impossible in many cases to identify the original composer or author and the melodies are subject to great variety of notation and tune. To meet these conditions s. 6 of the Indian Act follows the English Musical Copyright Act of 1902 by defining musical work as meaning any combination of melody and harmony, or either of them, printed, reduced to writing, or otherwise graphically produced or reproduced.

Customs Tariff.

General import duties are levied for fiscal purposes and not for the protection of Indian industries. But the tariff has been modified with a view to admitting free or at favourable rates articles the cheap import of which was considered necessary in the interests of the country. Thus certain raw materials manures agricultural implements and dairy appliances are admitted free. Machinery printing materials etc. are assessed at 2½ per cent and iron and steel railway material and ships at 10 per cent. High duties are imposed on tobacco liquors and matches.

Re Imports—Articles of foreign production on which import duty has been once paid if subsequently exported are on re-import exempted from duty on the following conditions—

The Collector of Customs must be satisfied—

- (1) of the identity of the articles,
- (2) that no drawback of duty was paid on their export
- (3) that the ownership has not changed between the time of re-export and subsequent re-import
- (4) that they are private personal property re-imported for personal use not mer- chandise for sale
- (5) that not more than three years have passed since they were re-exported

Duty is however charged on the cost of repairs done to the articles while abroad which should be declared by the person re-importing the articles in a form which will be supplied to him at the time of re-importation.

To facilitate identification on re-importation an export certificate giving the necessary particulars should be obtained from the Customs Department at the time of shipment of the articles which should be tendered for examination.

This concession of free entry on re-importation is not extended for the benefit of Companies or Corporate Bodies.

Drawbacks—When any goods capable of being easily identified which have been imported by sea into any Customs port from any foreign port, and upon which duties of Customs have been paid on importation, are re-exported by sea from such Customs port to any foreign port or as provisions or stores for use on board a ship proceeding to a foreign port, seven eighths of such duties shall, except as otherwise hereinafter provided be repaid as drawback.

Provided that in every such case the goods be identified to the satisfaction of the Customs Collector at such Customs port and that the re-export be made within two years from the date of importation as shown by the records of the Customs House or within such extended

term as the Chief Customs Authority, or Chief Customs Officer on sufficient cause being shown in any case determines provided further that the Chief Customs Officer shall not extend the term to a period exceeding 3 years.

When any goods having been charged with Import duty at one Customs port and thence exported to another are re-exported by sea as aforesaid drawback shall be allowed on such goods as if they had been so re-exported from the former port.

Provided that in every such case, the goods be identified to the satisfaction of the Officer in-Charge of the Customs House at the port of final exportation and that such final exportation be made within three years from the date on which they were first imported into British India.

No drawback shall be allowed unless the claim to receive such drawback be made and established at the time of re-export.

No such payment of drawback shall be made until the vessel carrying the goods has put out to sea or unless payment be demanded within six months from the date of entry for shipment.

Every person or his duly authorised agent claiming drawback on any goods duly exported shall make and subscribe a declaration that such goods have been actually exported and have not been re-landed and are not intended to be re-landed at any Customs port and that such person was at the time of entry on board and shipment and continues to be, entitled to drawback thereon.

Merchandise Marks—Importers into India especially from countries other than the United Kingdom would do well to make themselves acquainted with the law and regulations relating to merchandise marks. In Appendix II will be found the principal provisions of the Indian Merchandise Marks Act 1939 and connected Acts and the notifications issued thereunder. The following summary of the regulations in force does not claim to be exhaustive. For those seeking more complete information a reference is suggested to the Merchandise Marks Manual which is published under the authority of the Government of India and obtainable of all agents for the sale of Indian Government publications.

Infringements or offences may be classified conveniently under four heads—

- 1 Counterfeit trade marks,
- 2 Trade descriptions that are false in respect of the country of origin,
- 3 Trade descriptions that are false in other respects; and
- 4 Lengths not properly stamped on piece-goods.

Schedule II—(Import Tariff).

NOTE 1.—In the expression *ad valorem* used in these Schedules the reference is to real value as defined in Section 30 of the Sea Customs Act 1878 (VIII of 1878) unless an article has a tariff value assigned to it

NOTE 2.—Tariff valued heads are based on the ordinary trade description of each article and cover all reduced grades and mixtures unless they are separately provided for

Trade

India is pre-eminently an agricultural country and that fact dominates the course of its trade. The great export staples are the produce of the soil—wheat, seeds, cotton and jute. If we look back on the course of Indian trade over a long period of years we shall note a striking development towards stability. In the days that are past the outcome of the soil was subjected to periodic shocks from famine arising from the failure of the rains when the export trade in these staples dwindled to small proportions. But the spread of irrigation has produced a great change and though no doubt in future heavy losses may be incurred from the weakness of the monsoons they are never likely to be as catastrophic as in such years as 1896-97 and 18-9-1900. Well over thirty per cent of the cultivable area or the land irrigated under irrigation and huge new works are in progress to utilize the waters of the Ganges and of the Indus in Sind. Whilst these great works have been going on or are in progress to spill on the land the flood of the lower rivers of the North other work of a less imposing character have signified the real fruit of the South. A chain of storage tanks at the foot of the Western Ghats and through canals spread them over the parched land of the Deccan. The rivers of the South like the Cauvery are being harnessed to prevent their flooded waters from wasting. All over India irrigation works big and small are being restlessly prosecuted and their effect is to give a far greater stability to Indian agriculture.

The destination of these surplus crops is another factor of importance. The great customer for Indian cotton is Japan and to a lesser extent the continent of Europe. Continental Europe is also a large buyer of her oilseeds and another producer and her India and China. Whilst the United Kingdom is the great market for tea and what foreign countries are a very important factor in the Indian export trade therefore India had a vital interest in the economic recovery of Europe. When the post-war boom collapsed it hit India hard and

for a year or two the export trade suffered the shock. The progress of the Dawes Plan and the measures taken under the Treaty of Commerce with Austria and Hungary had to industrial with a special bearing on the prosperity of India they have a element of importance in inducing her to a revival of prosperity.

But why? India is pre-eminently an agricultural country, she ranks at the International Labour Office at times as one of the great industrial countries of the world. Her manufacturing industries are few in number and are concentrated in a few areas, but they are of great importance. The largest is the cotton textile industry which has its home in the cotton lands of Bombay with important industrial centres at Ahmedabad, Solapur and Nagpur. Next in importance is the jute industry. The jute is a natural monopoly of Bengal and the jute mills are concentrated in and near Calcutta. The metallurgical industry is not so recent growth. It flourishes in the iron and steel plants of the work of the Tata Iron and Steel Company, while subsidiary industries have sprung up to utilise the product of the blast furnaces and mill. A very large proportion of the jute manufacture is exported. The cotton textile industry has lost a considerable part of its export trade to China, the East Indies and East Africa, the mills and their principal outlet in India itself and even there they are subject to acute competition from Japan and China. In iron and steel industry it is for the most part a home industry through large quantities of Indian pig iron are shipped to the East Indies and in some cases to the western parts of North and South America. Therefore whilst India is still in the main an agricultural country three quarters of her population draw their subsistence from the soil her manufacturing industries are of large and growing importance and their prosperity every year affects in an increasing degree the general prosperity of the people.

I—GENERAL

The value of total exports of merchandise amounted to Rs. 309 crores as compared with Rs. 285 crores in 1925-26 showing a reduction of about 20 per cent. The most important factor that contributed to this decrease was the heavy fall in the world prices of raw materials, particularly of cotton and jute. The value of imports showed some slight expansion being valued at Rs. 231 crores as against Rs. 226 crores an increase of approximately 2 per cent.

Imports—Imports of cotton piecegood increased by 224 million yards or 14 per cent in quantity to 1,786 million yards while in value

the corresponding increase was only of Rs. 51 lakhs or 1 per cent. White goods rose from Rs. 16 crores to Rs. 17½ crores and coloured goods from Rs. 16 crores to Rs. 17½ crores, while grey goods, in which handling an increase of 39 million yards in quantity fell from Rs. 22 crores to Rs. 19½ crores. Imports of cotton twine and yarn were valued at Rs. 8½ crores against Rs. 7½ crores in the preceding year. The imports of sugar increased by 10 per cent in quantity from 805,000 tons to 924,000 tons and by 21 per cent in value from Rs. 16 crores to Rs. 19 crores. In iron and steel the quantity imported decreased by 4 per cent from 584,000 tons to 545,000 tons and the value by 7 per cent.

from Rs 18 crores to Rs 16½ crores. Machinery and millwork declined from Rs 15 crores to Rs 14 crores. The imports of railway plant and rolling stock on private account needed from Rs 5 crores to Rs 3½ crores. Imports of hand ware and motorcar were valued at Rs 2 crores and Rs 3 crores respectively as in the preceding year. Mineral oils fell away from 100 million gallons to 183 million gallons in quantity and from Rs 10 crores to Rs 9 crores in value. The value of imported provisions rose from 1.41 crores to Rs 5½ crores. Alizarin and aniline dyes increased in quantity from 10½ million lb to 15 million lb, while in value there was an advance by Rs 27 lakhs to Rs 170 lakhs. A larger quantity of foreign cotton was imported 45,700 tons valued at Rs 3 crores against 17,500 tons valued at Rs 1½ crores in the preceding year. Import of liquors and paper were valued at Rs 33 lakhs and Rs 27 lakhs. Income tax increased by Rs 19 lakhs and Rs 23 lakhs respectively over imports in the preceding year.

Exports.—The total value of raw cotton and cotton manufactures exports fell from Rs 10 crores to Rs 70 crores. Raw cotton declined 24 per cent in quantity from 4,000 tons to 3,000 tons and by 98 per cent in value from Rs 95 crores to Rs 84 crores. Raw jute increased in quantity by 17 per cent from 647,000 tons to 768,000 tons but as the previous year high range of price was not maintained the value fell by 20 per cent from Rs 38 crores to Rs 30½ crores. Exports of gunny bags and gunny bethaks increased in quantity while the value realised fell. The total value of raw jute and jute manufactures shipped fell from Rs 17 crores to Rs 40 crores. Export of indigo fell from 1,000,000 tons to 4,25,000 tons in quantity and from Rs 48 crores to Rs 14 crores in value. Shipment of rice fell from 2,40,000 tons valued at Rs 34½ crores to 2,00,000 tons valued at Rs 27 crores and of wheat from 21,000 tons valued at Rs 1½ crores to 178,000 tons valued at Rs 2½ crores. Exports of bark and galls also decreased but showed an improvement shipments increasing in quantity by 23 million lb and in value by Rs 2 crores to Rs 34½ million lb valued at Rs 20 crores. The total quantity of oil and exported again decreased by 41,000 tons to 838,000 tons while the value of the shipments fell by Rs 107 crores to Rs 19 crores.

Balance of Trade.—The balance of trade in merchandise in favour of India which reached the record figure of Rs 1,381 crores in 1926 fell to Rs 79 crores. As much is expected therefore there was a contraction in India's absorption of the precious metal, the net imports of gold being Rs 39 crores against Rs 12 crores in the preceding year. The net imports of gold amounted to nearly Rs 19½ crores or Rs 30½ crores less than in 1925 while the net imports of silver showed a small increase of Rs 3 crores from Rs 17 crores to Rs 20 crores owing to reduced shipments of white metal to China.

Index Numbers.—The trend of prices in India and abroad particularly in the United Kingdom, Japan and America, India's three best customers, was on the whole downward in spite of large increases in the price of certain commodities affected by the coal strike in the United Kingdom. The influence of the coal

strike was however offset by the fall in prices of raw cotton and textile goods. The Statist, wholesale price index number fell from 125.5 to 121.6, the Bank of Japan from 284.2 to 228.6 and in the United States of America the Bradstreet index number from 11.9 to 11. The index number of wholesale prices in Calcutta fell from 119 to 118.

Rupce Exchange.—The ruling value of the rupee was in the neighbourhood of 1s 8d throughout the year, the highest and lowest quotation for telegraphic transfers on London being 1.61.2 and 1s 7d respectively. At times, however, the rate showed a tendency to weaken and once or twice in December 1926 the Government of India had to resort to selling rupees in London to keep rates on the 1s 8d basis. The rupee amounted to 21.45,000 during the year and was made at the rate of 1 rupee to 11.5 pence.

Bank Rates. In the money market conditions were generally easy. In the beginning of the year the Imperial Bank of India rate stood at 6 per cent but dropped to 5 per cent on the 20th May. For the 15 months from June to the end of the year the rate remained at 4 per cent. The rate for seasonal loans for money continued with special ease for the year in the absence of market tied to a gradual rise in the bank rate to 7 per cent on the 9th February 1927 which was maintained until the close of the year.

Government of India Paper.—The following figures which compare the price and value per cent of 34 per cent Government of India paper in 1926 and 1927 April during the past twelve years are shown below.

	Price	Value per cent
1918	14.2	4.3
1919	11.0	1
1920	17.0	1
1921	21.0	4.9
1922	20.0	8
1923	18.0	6.5
1924	18.0	6.5
1925	21.0	7
1926	21.0	7
1927	21.0	7

Tariff Changes.—Certain minor changes in the tariff were introduced with effect from April 1926 such as the removal of the import duty on silk or a 1½ per cent and the reduction of the rate of duty on saccharine and saccharine tablets and on certain items of silk machinery, and the imposition of specific duties in place of ad valorem duty of 10 per cent on petroleum cement and on mineral oils used for kerosene and for lubrication. These were fully dealt with in last year's review. The improvement in financial position enabled the Government of India to effect important reductions in customs duties with effect from 1st March 1927. The import duty on motor cars has been reduced from 40 per cent to 20 per cent ad valorem and on tyre from 40 per cent to 15 per cent with a view to encouraging the development of motor transport in India. The import duty of 10 per cent on rubber seeds and stamps has been abolished at the special

representation of the Government of Burma in order to assist rubber cultivation. The export duty of Rs 1.8 per 100 lbs. on tea has also been abolished and measures have been taken to compensate for the loss of revenue arising therefrom by making the whole of the non-agricultural income of the tea companies liable to income tax. On the other hand, the import duty on unmanufactured tobacco has been raised from Rs 1.0 to Rs 1.8 per lb. The other important changes introduced were made in pursuance of the Steel Industry (Protection) Act 1927 which was enacted on the recommendations of the Tariff Board.

Tariff Board's Report on the Steel Industry in India.—The Steel Industry (Protection) Act 1924 which granted protection to the Indian steel industry was due to expire on the 31st March 1927. As provided in that Act the Tariff Board was directed to make a fresh enquiry as to the necessity for further continuance of protection and the degree of protection required. They accordingly made a very careful examination of the whole position in 1926 and submitted a report to the Government of India recommending the continuance of protection on certain lines for a further period of seven years. The system of boundaries was to be abolished and the protection was to be afforded by means of customs duties only. The Board proposed a double scale of duties, a full duty fixed with reference to the price of British

steel and leviable on steel coming from all countries and an additional duty based on the difference between British and continental prices and leviable on non-British steel only. In their opinion this was necessary in order to secure an equitable distribution of the burden over the different classes of consumers and to ensure the stability of the terms of protection. They also recommended that the basic duty should not be modified until after a statutory enquiry to be held not earlier than 1934 but suggested that the Governor-General in Council should be vested with power to vary the additional duty in either direction on a certification of variations in the price of non-British steel. The Board proposed very little material change in the list of protected iron and steel manufactures except that in the case of plates and sheets the protection was proposed to be extended to chequered plates and to sheets of all descriptions including those coated with metal other than tin or zinc. In the case of tin plates the protective duty was to be reduced from Rs 8.5 to Rs 4.1 per ton.

The Government of India accepted the main recommendations and introduced a bill in the Indian Legislature to give effect to them. The Bill was accepted by the Legislature and came into force on the 1st April 1927. The duty on unwrought zinc was also removed in mid-April 1927.

II—IMPORTS OF MERCHANDISE

Cotton manufactures (Rs 85.03 lakhs).—The import figures showed advances over the previous year's figures in all the principal items except cotton twist and yarn. The year did not however fulfill in the measure expected the hopes of a brisk revival of trade that were entertained during the early part of 1926. During the first three quarters of the year the tendency

generally was to buy only for immediate requirements and in view of the falling market in raw cotton this attitude was fully justified. The import trade took a more buoyant turn towards the latter part of the year and during January and February a fair volume of orders was placed with the Lancashire mills.

In the table below are given the values of the different classes of imported cotton manufactures during the past four years and during the pre-war 1913-14. When comparing the 1928-29 value figures with those of the previous year it should be remembered that the figures in 1926-27 are based on a much lower basis.

Imports of cotton manufactures	1913-14 (pre-war year)	1923-24	1924-25	1925-26	1926-27
	Rs (lakhs)	Rs (lakhs)	Rs (lakhs)	Rs (lakhs)	Rs (lakhs)

Handkerchiefs and hosiery	8.0	2.0	3.1	2.0	1.0
Thread	7.3	7.1	7.3	8.4	7.4
Other sorts	1.2	2.0	1.08	1	1.02
GRAND TOTAL	66.0	16.48	14.3	12.8	10.95

Cotton Twist and Yarn (Rs 66.2 lakhs). The imports under this head registered a fall further both in value and in quantity review. The total quantity imported amounted only to 40 million lbs. as against 6 million in 1923-24 and 1.52 millions in 1925-26. The value of the imports was only Rs 66.2 lakhs as compared with Rs 77.7 lakhs.

The production of yarn in Indian mills reached a record figure of 80 million lbs. while the imports which receded to 40.4 million lbs. showed a fall of 4 per cent as compared with 1925-26 and of 1. per cent as compared with 1924-25.

The United Kingdom's share in the total trade in cotton twist and yarn rose from 31 per cent

in 1923-24 to 41 per cent. Japan's share receded from 31 per cent to 24 per cent.

Cotton Piece-goods (Rs 35.01 lakhs).—The total imports of piece goods including fabrics during 1926-27 showed an increase in quantity of 2.24 million yards over the previous year or 14 per cent but the corresponding increase in value was only Rs 1 lakhs or 1 per cent. White goods contributed most to the increase the imports rising by 106 million yards to 571 million yards while coloured goods showed an increase of 82 million yards and grey goods of 79 million yards. In value white goods increased from Rs 13.99 lakhs to Rs 17.3 lakhs and coloured, printed and dyed goods from Rs 15.92 lakhs to Rs 17.22 lakhs but grey goods declined from Rs 21.84 lakhs to Rs 19.02 lakhs as the increase in quantity was not sufficient to compensate for the fall in prices.

The imports of coloured printed and dyed goods both in quantity and values from 1920-21 are shown separately for each item in the table below —

	1920-21	1921-22	1922-23	1923-24	1924-25	1925-26	1926-27		
	Million yards	Rs. (lakhs)	Million yards	Rs. (lakhs)	Million yards	Rs. (lakhs)	Million yards	Rs. (lakhs)	
Total printed goods	231.5	11.16	84.7	4.23	128.1	6.12	186.9	9.17	8.13
Total dyed goods	130.9	11.44	34.9	2.09	108.1	6.12	108.8	4.88	6.17
Total woven coloured goods	111.6	6.00	15.7	1.17	37.7	2.58	44.9	11.26	4.96

Details showing the principal varieties of each of the three main classes of imported piece goods are given below for the years 1923-24 and the two years 1924-25 and 1925-26. Figures in brackets indicate values in lakhs.

Principal varieties	1923-24	1924-25	1925-26	1926-27
(in lakhs)	1923-24	1924-25	1925-26	1926-27
Printed and dyed	11.16	4.23	6.12	9.17
Dyed	11.44	2.09	6.12	4.88
Woven coloured	6.00	1.17	2.58	11.26
Drills and jeans	1.1	1.1	1.1	1.1
Longcloth and sheetings	1.1	1.1	1.1	1.1
Other	1.1	1.1	1.1	1.1
TOTAL	11.16	4.23	6.12	9.17

Under grey goods the increase has mainly been in the bedsheet varieties. The United Kingdom as usual provided the major share of the imports of grey goods which increased from 201 million yards in 1920-21 to 382 million yards in the year under review, a rise of 50 per cent. The quantity imported in 1926-27 was below that of 1924-25 by 21 per cent. Imports from Japan on the other hand have been showing continuous increase. Her supplies in 1925-26 were in quantity 30 per cent more than that of the previous year while in 1926-27 an increase of 8 per cent over 1925-26 was recorded.

In the coloured section the United Kingdom's figure for 1926-27 was 315 million yards and

increased of 10 per cent in 1925-26 but a decrease of 1 per cent in 1924-25. Continental countries now an increasing activity in this section of trade. Japan also has considerably increased production.

Wool Raw and manufactured (Rs 4.46 lakhs) — Imports of raw wool remained at the previous year's level of nearly 5 million lbs. as against 8 million lbs. imported in 1924-25 and were valued at Rs 22 lakhs.

A further expansion of the import trade in woollen piece goods took place and the total consignments amounted to nearly 1½ million yards valued at Rs 2,77 lakhs as compared with 14½ million yards valued at Rs 2.92 lakhs in the

preceding year, a rise of 6 per cent in quantity but a fall of 5 per cent in value owing to a drop in prices.

Artificial Silk (Rs. 42.5 lakhs).—The market for artificial silk in India is steadily expanding from 1924-25 the rate of increase in the imports has been very rapid. As compared with the previous year imports of artificial silk yarn during 1926-27 showed a remarkable rise of 116 per cent in quantity and 37 per cent in value. Lark forged ahead of her competitor and upped 1,584,219 lbs. against 79,684 lbs. in 1925-26 and 1,302,277 lbs. in 1924-25. The United Kingdom lost ground slightly, her consignments falling from 761,000 lbs. to 65,000 lbs. Her imports of piece goods of cotton and artificial silk also there was a substantial rise. The consignments increased from 15 million yards to nearly 42 million yards.

Imports of sugar of all sorts, excluding molasses and confectionery, still further increased and amounted to 4,630,000 tons, a rise of 13.1 per cent over the preceding year and 1.2 per cent as compared with 1924-25. The value of the imports rose by 21 per cent to Rs. 18.37 lakhs. Sugar ranked second in importance in the list of imports while in the preceding year it had taken the third place. A feature of the market during the year was the increase in the imports of beet sugar partly at the expense of Java sugar. This is attributable to the firmness of the Java market as a result of a poor outturn in 1926-27.

The total area under sugarcane in India advanced from 2,78,000 acres in 1924-25 to 2,82,000 acres in 1925-26 and the total production of raw sugar (pure) from 4,77,000 tons to 5,20,000 tons.

The production of sugar by molasses in India and refineries in the season 1925-26 amounted to 80,270 tons as compared with 67,400 tons in 1924-25 and 194,700 tons in 1923-24.

Metals and Manufactures thereof (Rs. 32.4 lakhs).—The imports of metals and manufactures thereof decreased by 4 per cent in quantity from 94,000 tons to 90,000 tons and by 6 per cent in value from Rs. 34.5 to Rs. 32.4 crores.

Iron and Steel—(Rs. 18.75 lakhs).—The year 1926 witnessed the prolonged coal strike in the United Kingdom, a strike which had virtually paralysed the iron and steel industry of that country.

These facts had their influence on the Indian trade returns. The supplies from the United Kingdom were restricted throughout the period of stoppage and a larger proportion than usual of the Indian import trade went to Germany and Belgium.

Manufactured iron and steel imports included pig iron, old iron or steel, decreased by 3 per cent in value from 8,90,000 tons to 8,65,000 tons and by 7 per cent in value from Rs. 18.05 lakhs to 16.70 lakhs.

The noticeable feature of the year's trade was the high proportion of the imports from the Continent, Belgium supplying 2,00,000 tons or 30.4 per cent and Germany 9,00,000 tons or 29.3 per cent, as compared with 2,29,000 tons (25.9 per cent) and 9,00,000 tons (7.8 per cent) respectively in 1925-26.

Other Metals—(Rs. 7.05 lakhs). Imports of metals other than iron and steel and manufactures thereof increased in quantity from 6,00,000 tons to 6,40,000 tons but decreased in value from Rs. 7.25 lakhs to Rs. 7.05 lakhs.

Machinery and Millwork (Rs. 14.0 lakhs).—The engineering industry of the United Kingdom which was able to work on previous stocks of iron and steel and which was seriously affected by the coal stoppage, than was expected. In the year the imports of all kinds of machinery from India, through the machinery and painting, increased to the fourth place in order of importance in Indian imports, total value Rs. 14.0 lakhs. It is compared with Rs. 12.5 lakhs in 1925-26.

Railway plant and Rolling Stock (Rs. 6.09 lakhs).—Imports of private and Government locomotives and rolling stock for the year which since 1st April 1925, the railway rule of the Highways, was about Rs. 1,00 lakhs (Rs. 4.2 lakhs private and Rs. 1.8 lakhs Government) as compared with Rs. 8.14 lakhs (Rs. 98 lakhs private and Rs. 1.16 lakhs Government) in 1925-26.

Motor Vehicles (Rs. 1.09 lakhs). The increase in the imports of motor vehicles was well maintained. Lower prices stimulated the growing motor car trade and the further extension of motor transport in India. With the improvement of the financial position of the Government of India it has been found possible to reduce the rate of duty on motor cars from 10 per cent to 5 per cent to 20 per cent (20 per cent on pneumatic tyres and tax 10 per cent on the value of the motor vehicle in the last March 1926). The absence of a motor vehicle of good quality and the limitation on the local supply of motor cars are two important factors which will operate against the more rapid development of motor transport in India. The number of motor cars imported fell by 33 per cent from 1,000 in 1925-26 to 674 in 1926-27 and the value fell 41 per cent from Rs. 1.48 lakhs to Rs. 1.09 lakhs. The further heightening of duties growing in popularity and advancing in value in the market, although small and the limited stocks of American still maintain their prominent place in the trade.

The total value of the imports of hardware, excluding cutlery and the light metal ware, was slightly higher, 0.16 lakhs to Rs. 0.17 lakhs in 1926-27. The reduction in quantity was offset by the increase in value of the imports of metal lumps which supplemented the total and 0.11 lakhs. Hardware imports in value rose the other if one is to be taken into account, nearly 50 per cent, the last two years.

Mineral Oil (Rs. 8.80 lakhs).—Mineral oil imported into British India comprises mainly kerosene oil, fuel oil and lubricating oil. The total imports of all kinds of mineral oils from foreign countries during 1926-27 were 1,84 million gallons valued at Rs. 8.80 lakhs as compared with 1,70 million gallons valued at Rs. 10.0 lakhs in 1925-26. The imports of kerosene oil decreased by 11 per cent in value.

Provisions (Rs. 0.10 lakhs).—The total value of imported provisions rose by Rs. 85 lakhs from Rs. 4.05 lakhs in 1925-26 to Rs. 5.50 lakhs in 1926-27. Almost all the principal items, included under this head, viz. canned and

bottled provisions farina corn and patent foods condensed milk biscuit and cakes cocoa and chocolate butter and ghee contributed to this increase.

Liquors (Rs. 3.5 lakhs).—The total quantity of foreign liquors imported rose by 10 per cent. from 5,600,000 gallons in 1925 to 6,10,000 gallons in 1926. In value however the rise was not proportionate to the increase in the quantity the total imports being to the extent of Rs. 3.5 lakhs showing only a 2 per cent. increase over that of the preceding year. Of the total quantity of liquors imported consisted of ale beer and porter 4 per cent. of philt and 3 per cent. of wines etc.

Paper and Pasteboard (Rs. 1.08 lakhs).—The quantity of paper and pasteboard imported rose by 15 per cent. from 8,400 tons in 1925 to 10,04,000 tons in 1926. In respect of value there was also an increase of 10 per cent. from Rs. 1.41 lakhs to Rs. 1.58 lakhs the prices having remained fairly steady throughout the year.

Chemicals (Rs. 1.44 lakh).—The value of the imports of chemicals rose from Rs. 1.03 lakh in 1925 to Rs. 1.44 lakhs in 1926. Prices of chemicals in the United Kingdom from which the major share of the imports is drawn remained remarkably steady throughout the year in spite of the disturbances caused by the coal strike. As in the preceding year soda compounds accounted for 43 per cent. of the total value of

chemicals imported in 1926 and were valued at Rs. 1.07 lakhs as compared with Rs. 88 lakhs in 1925.

Cigarettes.—The changes in the rates of import duty on cigarettes and consequently all in prices had the effect of further pushing the trade in cigarettes. Imports of cigarettes rose from 3,41,000 lbs. valued at Rs. 1.52 lakhs to 4,17,000 lbs. valued at Rs. 1.95 lakhs in 1926.

The United Kingdom which is by far the largest supplier and generally commands about 99 per cent. of the trade increased her shipments from 3,37,000 lbs. valued at Rs. 1.50 lakhs to 4,14,000 lbs. valued at Rs. 1.93 lakhs.

Wool and Wools (Rs. 7.98 lakhs).—The total weight of raw and manufactured wools exported increased from 1,458,000 tons to 1,508,000 tons but the value of the exports fell from Rs. 3 crores to Rs. 80 crores owing to lower prices. Of the total value of the exports raw wools accounted for 83 per cent. and manufactured 17 per cent. as compared with 83 and 81 per cent. respectively in 1925. The following statement compares the quantities exported during 1910-14 and each of the past three years.—

1913 14 1924 25 1925 26 1926 27

Cotton—(Rs. 58.60 lakhs)—A short and late Indian crop accompanied by a record American crop following on the top of the two large crops of 1920 and 1921 affected the exports of raw cotton from India which fell in quantity by 4 per cent and in value by 33 per cent. The Indian cotton crop of 1920-21 was estimated at 49,10,000 (49 million lbs) as compared with 22,00,000 bales in 1920-21 and 6,08,80,000 bales in 1921-22. The American crop of 1920-21 was estimated at 18,81,80,000 bales (23,22,000 bales of 400 lbs each) exceeding the output of 1920-21 by 5,14,000 bales (3,14,20,000 bales of 400 lbs each). The Egyptian crop of 1920-21 was limited at 1,78,90,000 bales (of 400 lbs each) as compared with 1,94,00,000 bales in 1920-21 and 1,99,00,000 bales in 1921-22.

Cotton Manufactures—(Rs. 10.75 lakhs)—The appointment of a Tariff Board to enquire into the condition of the textile industry to examine the causes of depression in its report of the measures required for alleviation was mentioned in last year's review. The Board whose report has recently been published has found that the depression is to a large extent due to world causes. In India itself the depression has been more acute in Bombay than in other centres, and this is attributed partly to causes for which the mill owners themselves are responsible partly to the competition of Japan and partly to the competition of mills in other parts of India which have been aided by very low raw material and consumable materials and cheaper labour supply. Under the latter head the industry suffers on the undue concentration of production and insufficient distribution of production. The Board also found that the industry in India played in an unfair position vis-à-vis Japan owing to the inferior condition of labour prevailing at present in that country. The majority of the Board recommended among other things a bounty for a period of four years of 1 anna per pound or the equivalent on the spinning of higher count of yarn based on the output of an average of 1 per cent of the total working spindleage in a mill. They also proposed an additional duty of 4 per cent on all imports of cotton piece goods. The Government of India in their resolution on the report have disagreed with the necessity for a bounty on the spinning of high counts of yarn as a long established industry such as the cotton textile industry in Bombay should need no stimulus at the onset of the general taxpayer if such a development is in its own interests. They also consider that the advantage which Japan has over India in the manufacture of piece goods on account of inferior labour conditions is sufficiently covered by the existing revenue duty of 11 per cent on imports. They have however agreed to introduce legislation with a view to remove in pursuance of the recommendation of the Board the import duty on machinery and certain mill stores for a period of three years subject to certain conditions e.g. the desirability of encouraging the manufacture in India of such machinery or stores and legislation in order (1) to modify the import duty on cotton yarn from 5 per cent to 5 per cent or 14 annas per pound whichever is higher and (2) to reduce the import duty on artificial silk yarn and thread from 15 per cent to 7 per cent. The other proposals of the Tariff Board are still under consideration.

Cotton Yarn—(Rs. 4.09 lakhs)—The production of yarn in Indian mills in 1920-21 totalled 89 million lbs as compared with 85 million lbs in 1920-21 and 79 million lbs in 1921-22 and 684 million lbs in 1921-22.

Imports of yarn increased from nearly 2 million lb to 4½ million lbs. The average exports in the five years ending 1921-22 were 19½ million lbs while the average for the quinquennium 1914-15 to 1918-19 was 130 million lbs and of the post-war quinquennium 8½ million lbs.

The total production of all exports in Indian mills in 1920-21 showed a noticeable increase of 14 per cent in quantity as compared with the previous year. The proportion of the exports of 1920-21 to the total production was however very small the ratio being in 1920-21 14 per cent, in 1919-20 7 per cent and in 1918-19 6 per cent compared with 9 per cent in 1914-15.

Foodgrains and Flour—(Rs. 80 lakhs)—Wheat, grain, pulses and flour constituted a still smaller share to the export trade of the country compared with the average annual shipment in the pre-war quinquennium the exports represented a decline in quantity of 4 per cent while as compared with 1920-21 the quantity fell by 1 per cent and the value by 18 per cent. The total exports during the year amounted to 24,90,000 tons valued at Rs. 80 lakhs as compared with 10,30,000 tons valued at Rs. 48 lakhs in 1920-21. All the important items showed a decline in quantity in the bulk falling by 14,00,000 tons or 20 per cent wheat by 6,00,000 tons, rice by 1,00,000 tons, pulses by 1,00,000 tons in the preceding year. Pulses declined by 2,00,000 tons to 115,000 tons.

Tea—(Rs. 2.04 lakhs)—The total production of tea in India in 1920-21 is estimated at 993 million lb as compared with 3.4 million lb in 1920-21 and 2 million lbs in 1921-22. Assam as usual contributed the largest share, her output being 60 per cent of the total production while Northern India excluding Assam contributed 25 per cent and Southern India 15 per cent. The total area under tea in 1920-21 was 740,000 acres against 725,000 acres in 1920-21.

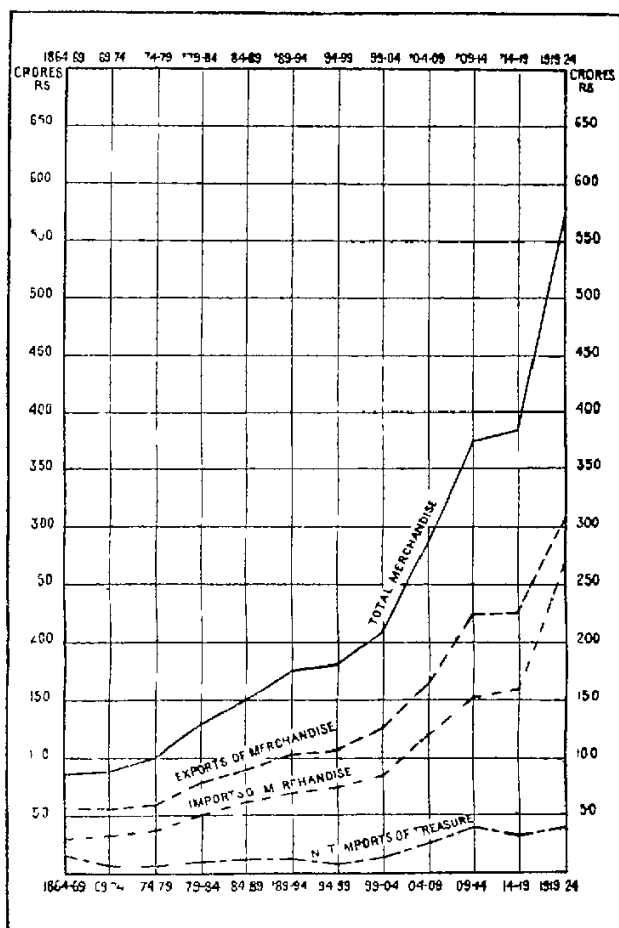

Oilseeds—(Rs. 19.00 lakhs)—The exports of oilseeds showed a large increase of 33 per cent in quantity from 1,00,000 tons in 1920-21 to 1,35,000 tons in 1921-22 while in value there was a drop of 3 per cent from Rs. 23.61 lakh to Rs. 19.00 lakhs.

Hides and Skins—(Rs. 14 lakhs)—The export figures under this head show no striking variation. Shipments of raw hides and skins amount to 1,20,000 tons which was only 100 tons less than the exports of the previous year. 31½ per cent of the exports under this head consisted of raw hides which amounted to 27,500 tons valued at Rs. 7 lakhs as compared with 24,400 tons valued at Rs. 3.21 lakhs shipped in the preceding year.

Metals and Ores—(Rs. 7.21 lakhs)—The total exports of metals amounted to nearly 364,000 tons in 1920-21 or 45,000 tons less than in the preceding year.

The Foreign Sea borne Trade of British India during the 60 years
(1861-69 to 1919-24) Quinquennial averages

(PRIVATE AND GOVERNMENT)

Manganese Ore (Rs 140 lakhs).—Manganese ore which represented about 92 per cent of the total quantity of ores exported decreased from 14,000 tons to 5,98,000 tons in quantity and from Rs 1,54 lakhs to Rs 140 lakhs in value.

Coal—(Rs 61 lakhs). The arrangement made for the grading of coal and the grant of certificates for coal intended for export referred to in the previous years review helped the Indian coal trade to recover slowly from the effects of competition and to strengthen its position in adjacent markets. It also received an impetus

perpetuated, though temporary stimulus during the year from the shortage caused by the prolonged coal strike in the United Kingdom. The prices realised were not very attractive but they helped to clear the accumulated stocks. Exports of coal rose only 168 per cent in quantity from 240,000 tons in 1925 to 649,000 tons in 1926, and by 134 per cent in value from Rs 24½ lakhs to Rs 41 lakhs.

Re-Exports.—The total value of foreign merchandise re-exported showed a further decline to £ 5,00,000 from Rs 10½ crores in 1925 and Rs 13½ crores in 1924-25.

Balance of Trade.—The surplus of India's exports over imports of private merchandise in 1926-27 amounted to Rs. 79 crores which was less than half of the record figure of the preceding year when the credit balance stood at Rs. 161 crores having progressively

risen from Rs. 155 crores in 1924-25 Rs. 14 crores in 1923-24 and Rs. 90 crores in 1922-23. The following table shows the imports of gold and bullion on private account during the last three years as compared with the average of the pre-war war and post-war periods —

(in Lakhs of Rupees)

The Indian Stores Department.

The Indian Stores Department was instituted on 1st January, 1922 after a specially appointed officer had during the preceding year investigated its possible sphere of work. The Government of India nearly half a century previously formulated the policy of purchasing for State use stores of indigenous origin or manufacture rather than stores produced or manufactured abroad and for many years before the creation of the new department the rules governing stores purchase for public departments prescribed that subject to certain conditions as to quality and so forth preference should be given to articles manufactured wholly or in part in India. Revisions of these rules to make them better serve the purpose for which they were drafted were from time to time made but as Indian industrial development progressed and as Indian nationalism increased complaints that the policy presumed to be embodied in the rules was not in effect carried out grew in volume. The Indian Industrial Commission found that the industrial resources of the country were far from sufficiently utilised by Government Departments but that the reason was not due to restrictions in the stores purchase rules but to the failure of the Departments fully to avail themselves of the scope which the rules offered. They attributed this to lack of information as to sources and market values of Indian supplies and to the absence of inspecting

agencies and they concluded that a central expert agency for the purchase and inspection of stores required for public purposes should be established. The Stores Purchase Committee which the Government of India appointed to advise them on this question unanimously supported the same conclusion and Government with the approval of the Secretary of State accepted the principles of the recommendation. The Indian Stores Department was thereupon instituted.

It was designed primarily to deal with the requirements of the central purchasing departments and with those of the minor administrations directly controlled by the Government of India, it being impossible under the Reforms Constitution for the Government of India to compel the Provincial Governments similarly to utilise its services. The Central Government at the same time invited use of its services by Provincial Governments, Municipalities, Port authorities, company managed railways and other public or semi public bodies.

Organisation.—The preliminary organisation of the Stores Department constituted on 1st January 1922 included as gazetted staff—

- A Chief Controller of Stores.
- A Director of Inspection.
- A Director of Purchase and Intelligence.

A Director of Textiles Purchase**An Assistant (Chief Controller)**

The designation of the Director of Textiles Purchase was early changed to Deputy Director of Purchase (Textile) and within the first year an Assistant Controller of Textiles Purchase was appointed. The Department's growth has thus from its beginning constantly broadened and accelerated. The preliminary organisation was instituted temporarily, but the department and its organisation were before the end of 1922 put on a permanent basis. The offices of Superintendent of Focal Manufactures and Government Test House at Alipur and of the Metallurgical Inspector at Jamshedpur hitherto under the direct administration of the Industries and Labour Department were in July 1922 absorbed in the new organisation.

The Functions of the new Department were early indicated as being—

(a) To act subject to certain limitations as a purchasing and inspection agency and in an advisory capacity on all matters connected with the purchase of stores in their widest sense in the public service on behalf of all Central Departments of Government and of the major Local Governments and also on behalf of such major Local Government companies working railways, corporations, Port Trusts, Municipalities and similar quasi public bodies and Indian States. It may claim to avail themselves of its assistance.

(b) To scrutinise the Home Indent or all Central Departments, minor Local Governments and such other authorities as utilise its services with a view to ensure attention to the encouragement of Indian Industries so conducting its operations in this respect as to prevent the purchase of articles of non Indian manufacture when goods of indigenous production of similar quality and price are obtainable.

(c) To purchase and inspect in India for central departments and other buyers on the lines above indicated certain specified commodities.

(d) To inspect stores purchased otherwise than through the agency of the department.

(e) To draw up for the approval of departments and others with effect of their purchases through the department specifications of the various classes of stores in demand and if so desired to advise and assist departments and others which make their own purchases in the preparation of specifications and the standardisation of patterns.

(f) To act as a central bureau of information on all matters affecting the purchase of stores and their prices, particularly with reference to the extent of Indian manufactures and their capacity from time to time.

In order to secure the benefit of the accumulated experience of over sixty years of purchase and inspection work in the foremost markets of the world which had been acquired by the India Store Department in London advantage was taken of the presence of the Director of Purchase and Intelligence on leave in England to depute him to examine the system in force

in the London organisation with a view to the embodiment of what was useful to the Indian Stores Department in its organisation and methods. It was at the outset decided that the Department should be quasi commercial and self supporting, charging a small percentage upon the cost of its purchases and other minimum fee in other branches or activity to defray its establishment and other costs.

Past Year's Work—By 1922 the Department had become represented in most of the chief industrial and commercial centres of India. It had attracted a fairly large clientele and was conducting operations on a large scale. The latest report on its operations that for the financial year 1921-22 shows that during that year the value of the purchases effected by it was Rs. 3,948,000 which was an increase of 4 per cent on the figure for the next preceding year. In the case of textile goods these purchases in India represented 9 per cent of the total. The bulk of the purchases of engineering and allied stores was as they have always been of articles of overseas manufacture. A development in this respect recently made is an arrangement with the consulting engineers of the High Commission in London for them to open a branch in India. Government will bear the overhead charges involved in this but will otherwise pay the engineers nothing for their work and the development will thus at the disposal of the Stores Department the consulting engineers' expert knowledge and acquaintance of world markets and of local manufacturing firms in regard to heavy engineering supplies such as railway engines, great bridge work and so forth. This will enable the Stores Department to take over from the High Commission and the Indian Store Department under his control in London the purchase of these heavier supplies and to develop their adapted policy of inviting tenders in terms of rupees in India in lieu of in sterling in London.

The numbers of Europeans and Indians holding gazetted appointments in the Department at the end of 1922-23 were 21 and 24 respectively. The number of authorities comprising not only Departments at the State, Local, Central and Provincial but also public bodies such as Company railways and Municipalities, Indian States and a number of private firms availing themselves of the services of the Department is rapidly increasing. A number of the major Provincial Governments have promulgated rules for the purchase of stores and most of these provide for the utilisation of the Department. The Central Provinces have designated the Department one of the agencies to be employed and the Governments of Bengal and the Punjab have appointed the Department their sole purchasing agency. The Government of Bombay have provided that all purchases in India above Rs. 500 in value whether of indigenous or imported stores except plant and machinery and component parts shall normally be made through the Department. They have also directed that all Indents upon the Indian Store Department in London shall be forwarded through the Indian Stores Department.

For the sole purpose of procuring the registration of one or more documents in relation to a single transaction or for admitting execution of one or more such documents	1	0	Security Bond —(a) When the amount secured does not exceed Rs 1,000—The same duty as a Bond for the amount secured		
When required in suits or proceedings under the Presidency Small Causes Courts Act 1882	1	0	(b) In any other case	10	0
Authorising 1 person or more to act in a single transaction other than that mentioned above	2	0	Settlement —The same duty as a Bond for the sum equal to the amount or value of the property—settled as set forth in such settlement.		
Authorising not more than 5 persons to act jointly and severally in more than 1 transaction or generally	10	0	Revocation of Settlement —The same duty as a Bond for a sum equal to the amount or value of the property concerned as set forth in the instrument of revocation but not exceeding ten rupees		
Authorising more than 5 but not more than 10 persons to act	20	0	Share warrant to bearer issued under the Indian Companies Act—One and a half times the duty payable on a conveyance for a consideration equal to the nominal amount of the shares specified in the warrant.		
When given for consideration and authorising the Attorney to sell any immovable property—The same duty as a Conveyance for the amount of the consideration.			Shipping Order	0	-
In any other case, for each person authorised	2	0	Surrender of Lease —When duty with which lease is chargeable does not exceed Rs 5—The duty with which such Lease is chargeable.		
Promissory Notes—			In any other case	5	0
(a) When payable on demand—			Transfer of Shares —One half of the duty payable on a Conveyance for a consideration equal to the value of the share.		
(i) When the amount or value does not exceed Rs 2.00	0	1	Transfer of any Interest secured by a Bond Mortgage-deed or Policy of Insurance —If duty on such does not exceed Rs. 5—The duty with which such Bond, &c., is chargeable.		
(ii) When the amount or value exceeds Rs. 2.50 but does not exceed Rs. 1,000	0	2	In any other case	10	0
(iii) In any other case	0	4	—of any property under the Administrator General's Act 1874 Section 31	10	0
(b) When payable otherwise than on demand—The same duty as a Bill of exchange for the same amount payable otherwise than on demand			—of any trust property without consideration from one trustee to another trustee or from a trustee to a beneficiary—Five rupees or such smaller amount as may be chargeable for transfer of shares.		
Protest of Bill or Note	2	0	Transfer of Lease by way of assignment and not by way of under lease—The same duty as a conveyance for a consideration equal to the amount of the consideration for the transfer		
Protest by the Master of a Ship	2	0	Trust, Declaration of —Same duty as a Bond for a sum equal to the amount or value of the property concerned, but not exceeding	15	0
Proxy	0	2	Revocation of —Ditto but not exceeding	10	0
Receipt for value exc Rs. 20	0	1	Warrant for Goods,	9	8
Reconveyance of mortgaged property—					
(a) If the consideration for which the property was mortgaged does not exceed Rs 1,000—the same duty as a bond for the amount of such consideration as set forth in the Reconveyance.					
(b) In any other case	10	0			
Release —that is to say any instrument whereby a person renounces a claim upon another person or against any specified property—					
(a) If the amount or value of the claim does not exceed Rs 1,000—The same duty as a Bond for such amount or value as set forth in the Release.					

The Indian National Congress.

For a complete history of the movement represented by the Indian National Congress the reader is referred to earlier editions of the Indian Year Book. The Congress was founded in 1885 by Mr Allan Octavian Hume a retired member of the Indian Civil Service and it held its first session in Bombay at Christmas of that year, the fundamental principles of the Congress were laid down to be—

Firstly the fusion into one national whole of all the different and discordant elements that constitute the population of India,

Secondly, the gradual regeneration along all lines mental moral social and political of the nation thus evolved and

Thirdly the consolidation of union between England and India by securing the modification of such of the conditions as may be unjust or injurious to the latter country

With these objects in view the Congress pursued an uneventful career until 1907. It undoubtedly exercised a great influence in inducing a spirit of national unity amongst the diverse peoples of India, in focusing the chief political grievances and in providing a training ground for Indian politicians. But in 1907 the Extremists chiefly of the Deccan and the Central Provinces who had for some time chafed under the control of the older generation, succeeded

in wrecking the Surat session of the Congress and produced a split which had long been seen to be imminent. The senior members of the Congress therefore re-crystallised its creed in definite terms. They laid down that—

The objects of the Indian National Congress are the attainment by the people of India of a system of Government similar to that enjoyed by the self governing members of the British Empire and a participation by them in the rights and responsibilities of the Empire on equal terms with these members. These objects are to be achieved by constitutional means by bringing about a steady reform of the existing system of administration and by promoting national unity, fostering public spirit and developing and organising the intellectual moral, economic and industrial resources of the country

For some years following 1907 efforts were made to heal the split and these were without avail until 1916 when a re-united Congress met at Lucknow under the presidency of Balu Ambica Charan Muzumdar of Faridpur in Bengal. But the union then effected was purely superficial the difference between the Moderates and the Extremists was fundamental. The Extremists captured the machinery of the Congress and from the period of the special session held at Calcutta in September 1920 the Congress passed entirely under the domination of Mr Gandhi.

THE NON CO OPERATION MOVEMENT

It was in 1920 that Mr Gandhi, who had only in the previous year unsuccessfully started his Passive Resistance struggle as a protest against the Rowlett Act conceived his idea of non co-operation. Originally intended to be a protest against the British policy towards Turkey the fighting of two other grievances was later on added to its first object namely the punishment of officials in the Punjab Martial Law regime and the securing of Swaraj for India. Mr Gandhi and Mr Shankar All were able in 1920 to get the Calcutta Special Congress to endorse their programme of progressive non violent non co-operation which was reiterated by the annual session at Nagpur which on Mr Gandhi's motion changed its old creed into the attainment by India of Swaraj by all legitimate and peaceful means. The stern measures adopted by local Governments led to the imprisonment of a large number of active Congressmen with the result that the Ahmedabad Congress in 1921 made a grim resolve to challenge the repression movement by appointing Mr Gandhi as dictator and by resolving to start a 'No Tax' campaign at Bardoli. The riots in Chauri Chaura in 1922 preceded by the Bombay riots in 1921 during the Prince of Wales' visit (see 1923 and 1924 editions of this book) opened Mr Gandhi's eyes to the impossibility of maintaining a non-violent atmosphere under existing conditions. He suspended his proposed civil disobedience campaign, and replaced it by what is known as the Bardoli Programme which sus-

pended all the aggressive items of non co-operation in favour of the promotion of intercommunal unity and khaddar. Soon after Mr Gandhi was arrested for sedition tried and sentenced to undergo imprisonment for six years (See 1923 and 1924 editions)

This turn of events threw cold water on the enthusiasm of non co operators who got discouraged. In order therefore, to rouse the country, a readiness for aggressive action once more the All India Congress Committee appointed a Committee known as the Civil Disobedience Committee in June 1922. The Committee toured the country and in October 1922 produced two reports one favouring Council entry to offer obstruction to Government and the other recommending the adoption of the Bardoli programme. A battle royal ensued between the two parties at the Gaya Congress. The anti Council Party won the day and the Councilites led by the Congress President Mr C. R. Das formed the Swarajya Party in order to push their own Council programme. The Swarajya Party by its continuous propaganda gained considerable support in the country. The No-Change Party seeing the trend of public opinion got the Congress to lift the ban on Council entry. The Swarajists secured a large number of seats in various provincial Councils and in the Assembly. The annual Congress at Goranada under the presidency of Mr Mahomed Ali, put an end to the Council entry controversy.

THE CONGRESS IN 1924 26

The Congress had an eventful career in 1924. Mr. Gandhi who had an attack of appendicitis of a serious form in the Yerowda Jail was released by the Government of Bombay. Immediately the No-Changeers revived their hopes of fighting the Swarajists to a finish. After nearly six weeks' discussion in May 1924 Mr. Gandhi definitely dissociated himself from the Council Programme and the Swarajist obstructive policy, while the Swarajist leaders in a separate statement defended their policy. Public controversy again centred round the Council question. In the meanwhile the Government of Bengal with the sanction of the Governor General promulgated an Ordinance in order to check the forces of the growing revolutionary movement in Bengal. Under this Ordinance and under Regulation III of 1818 they effected several arrests including a few Swarajists. Mr. Gandhi went to Calcutta and after a series of consultations with the Swarajist leaders drew up what is now known as the Gandhi Swarajist Pact by which Mr. Gandhi agreed to suspend the non-co operation movement and to recognise the Swarajists as the accredited representatives of the Congress on legislative bodies while in return the Swarajists agreed to his spinning franchise which laid down 2,000 yards of hand spun yarn every month as the subscription to Congress membership instead of the four annas a year as decided by the Nagpur Congress.

The Congress which met at Belgaum during Christmas week under Mr. Gandhi's presidency endorsed the Bengal Pact. Among the other resolutions passed by the Congress was one suspending the non-co operation programme. Thus the movement received its final burial at the hands of the very author of its being. The policy of the Congress executive during the first half of 1924 was one of aimless drift. The death of Mr. C. R. Das demoralised the Swarajists. Mr. Gandhi promptly went to their rescue and at the end of the year the Swarajist political programme was formally adopted by the Cawnpore Congress. Of a more far-reaching character was the split that occurred in the ranks of the Swarajists themselves at Cawnpore. Messrs. Jayakar and Kelkar from Bombay and Dr. Muzumdar from the C. P. registered their emphatic protest and resigned their seats on the Legislatures professing thereby to liberate themselves from the Swarajist obligations and desiring to be free to propagate their own cult of Responsive Co-operation and acceptance of office.

The Responsive Co-operators, who had in the meanwhile strengthened their position and secured appreciable support to their creed of co-operation when possible and opposition when necessary led the country's attack on the Swarajists.

The elections came and went. Generally speaking the Swarajists were ousted. What with the defeat sustained by the Congress nominees in the elections and the growing

strength of the communal organisations the premier political organisation in the country namely the Congress lost its prestige considerably.

It was in this atmosphere that the 41st session of the Congress was held in Assam during Christmas week in 1924. After much heated discussion the Congress set its face against the acceptance of ministries or other offices in the gift of the Government and approved of the policy of rejection of budgets and refusal of supplies, unless response to the national demand was forthcoming. The hardy attitude in the shape of a resolution setting complete independence as the goal of the country was opposed by Mr. Gandhi himself and turned down by a large majority. The Congress fought shy of Hindu-Muslim discussions although they had assumed serious proportions during the year and relegated them to the working Committee of the Congress.

Congress in 1927

The year's Congress activities bore distinct traces of the character of the President Mr. S. Ponnappa Iyengar—in particular his inordinate ambition to glorify his presidency by the achievement at any price of communal and political unity and his general weakness resulting from a desire to placate opponents' humour, friends and please all. It was an impossible task and impossible it proved to be. The decision of the Calcutta Congress against the acceptance by Congressmen of ministries definitely alienated the Responsivists. The Liberals were claiming the Responsivists who were still in the Congress but not of it. While the political influence of the Congress in the country was confined to the handful of Swarajists with their dull and destructive tariffs, the communal tension was worsening day by day leading to alarmingly frequent outbreaks of riots and minor disturbances. Every Hindu procession particularly in Northern India and every Mahomedan festival became a head-line event and it was with much relief that one realised that it passed off quietly. This communal antagonism was doubtless a disquieting feature of the country's advance and the leaders were not blind to it. But frantic efforts were made of no more than pious paper resolutions which were broken before the ink had dried. The year was full of such instances.

The first move of importance in the direction of communal unity was what were known as the Delhi proposals which a body of leading Mussulmans gathered at Delhi offered at the instance of Mr. Jinnah to the Hindu community. It was thought that the quarrels between the two communities were ultimately traceable to the existence of separate electorates. Hence it was sought to abolish them. Although a minority community the Mahomedans according to the Delhi proposals agreed to joint electorates with reservation of seats provided. Sind was constituted a separate province and reforms were introduced in the N. W. F. Provinces and Baluchistan. The proposals met with mixed reception, opinion being divided even inside the

Congress Camp. The Responsivists almost all of whom are ardent supporters of the Hindu Mahasabha principles were unwilling to accede to the conditions under which the separate electorates were surrendered. Their attitude stiffened up the wavering Mussalmans into withdrawing the offer. Ultimately, however, the proposals were formally accepted by the All India Congress Committee which met in Bombay not without mental reservation on the part perhaps of everyone concerned. The leaders called it a red letter day in the Congress annals declared that Hindu-Muslim unity had been achieved and faucid Swaraj was within reach. A short while later riots broke out. If only to demonstrate the hollowness of the pact.

More contentions than this was the issue of political unity which Mr. Iyengar had set himself to establish. Early in the year he found Maharshtia, the stronghold of Responsivism and was evidently impressed with their argument that acceptance of ministry would be to the good of the country. Presumably Mr. Iyengar himself shared that view inasmuch as he was anxious to secure the Congress seal for a course of action which Kwarajists in his own Province were denouncing for. It was clear that the Swarajists in the Madras Legislative Council were not inimical to the Independent Ministry which they had helped to bring into existence but which they were prepared to throw overboard and replace the moment the Congress was lifted. No wonder that the die-hards accused the Madras Swarajists not excluding the Congress President of being traitors to the Swarajist creed and of being Liberals in Congress cloak. Most of the Congressmen like the country had become sick of Swarajism and only too much aware of the futility of its practice and had come to realise that the next logical step was to try to work directly and show its unworkability to the Statutory Committee. The Congress President was vacillating but Pandit Nehru was a diplomat. Rather than risk a defeat at the hands of the die-hard Congressmen and incidentally rival to the country that he was dreading from the heroics and bravado of Swarajism the President chose to shelve the question of political unity with the connivance of the Responsivists but in the teeth of die-hard opposition. But this would not do for the smouldering fire of die-hard resentment against the President vacillation broke out into open attack. This was precipitated by a decision reached by the Congress Working Committee markedly Responsivist in tone on the question of the acceptance of ministry. The Assam Congress resolution was so modified that not only did uniform opposition to the ministry cease to be Congressmen's duty but the question whether Congressmen should support or oppose the ministry was also left to be decided by the Congress parties in the Legislatures concerned.

This was too much for the die-hards who though small in number were literally thirsting for the blood of the Congress President and those responsible for the above mentioned resolution. A requisition was got up to call a special session of the All India Congress Committee. The meeting was put off from time to time until it did meet in October at Calcutta. It was so late in the year and such a long time had elapsed

since the Working Committee's condonation of the Madras Swarajist support to the Independent Ministry that the issue was not pressed by the die-hards. The session was rendered lively by the feeling that was generated by the consideration of the conclusions arrived at by the unity conference held at the same place earlier. There was a bitter debate marked by a walk-out, several amendments and numerous points of order. Ultimately the resolutions were ratified and the era of communal peace hailed—but almost simultaneously riots broke out at Calcutta. As a result conversions and reconversions were to be allowed and so were music before mosques and cow sacrifice—subject of course to conditions. It is significant to note that important personalities like Dr. Moonj Lalajpatral and Pandit Mahatya refused to attend the Unity conference while Mr. Gandhi was not even invited.

All the talk and quarrel about the internal affairs of the Congress were set at rest by rumours of the exclusion of Indians from the personnel of the Royal Commission on Indian Reforms. The major issue drowned all petty controversies. Most of the leaders fancied that it would be an insult to India if Indians were not appointed members of the Commission. Even moderates repented for their sobriety and reasonableness affected extremism. As feeling ran high in the country the Viceroy thought it necessary to explain the reasons that induced the British Government to adopt the course—which he later announced—and to remove any misapprehension about the motives behind the decision. His Excellency cancelled a part of his autumn tour and went to India to interview almost all the accredited leaders of the land whom he had invited individually. What took place at the interview was a matter of speculation but it is evident from the statement which he issued subsequently and from the adverse comment which was made thereon that the Viceroy tried to explain the reasons for setting up a purely Parliamentary Commission but that the leaders persisted in thinking that it was a studied insult to India. The Viceroy's statement pointed out how it was impossible to secure adequate representation for the various and warring political and communal interests of India without making the Commission unwieldy, set out the advantages of an inquiry by eminent Parliamentarians free from prejudices and opinions formed earlier and explained the difficult position in which Parliament would find itself if confronted with conflicting reports which a mixed Commission was bound to lead to. Put the leaders would not listen to reason. The explanation in Parliament that the Government of India Act of 1919 contemplated the setting up only of a Parliamentary Commission was turned down as specious argument. Even an earnest attempt on the part of the ex-Labour Premier to show to Indians the unique and unprecedented advantage of their Legislatures being allowed not only to place their views before the Commission but also to offer their criticisms on the report before the joint Parliamentary Select Committee proved ineffective. For a few days but for a few days only the country seemed unanimous in condemning the composition of the Commission, Mussalmans the untouchable millions, Zemindars and a

growing section of the community at large found on cool consideration that it would be better to co-operate with the Commission.

Congressmen however thought otherwise. Boycott of Commission was the breath of their nostrils. Hindu Muslim unity their fond dream and the drafting of a Swaraj constitution for mutuating their political demands their pastime. Attempts had already been made at Delhi and Calcutta to solve the communal tension but the formulas evolved were acceptable neither to the Hindus nor to the Mussalmans. With boycott, unity and constitution making as their war cry Congressmen met at Madras during Christmas under the presidency of Dr M. A. Ansari. As President-elect he had made statements which indicated his future policy so that his presidential speech disclosed nothing new.

He deplored communal dissensions and asked both communities to accept the decision of the Congress. Seeking to make the Congress a truly national body he invited all communities and political parties to join it and urged those who desired to go to the Councils to form one people's Party of opposition on the basis of the Congress programme. He advocated a boycott of the Commission demanded a round table conference of Indian and British representatives to settle India's future and recommended the preparation of a constitution and its submission to a National Convention.

Of the many topics discussed informally and at the Working Committee and the Subjects Committee the Hindu Muslim unity proposal stood out prominent. It was a sure sign of the state of feeling that prevailed then and prevail now as these lines are being written that the Hindu Mahasabha leaders were opposed to the creation of communal provinces as a condition attaching to the introduction of joint electorates. A definite breach was imminent but thanks to Mr Gandhi a compromise was reached. The resolution was finally adopted by the open Congress stipulated the introduction of joint electorates with reservation of seats, the constitution of Sind, Karnatak, Andhra and Utkal as separate provinces and the introduction of the forms in the N. W. F. Provinces. On the question of music outside mosques and cow slaughter each community should respect the other's feelings without prejudice to the rights of the respective communities. Of course the Congress decided on a thorough boycott of the Commission including hartals and mass demonstrations. As expected the Working Committee was asked to draft a Swaraj constitution in consultation with other bodies and to place it before a National Convention to be convened at Delhi not later than March 1928. By far the most spectacular of the resolutions was that which declared the goal of the Indian people to be complete national independence which was carried after considerable opposition.

The National Liberal Federation.

The definite breach between the moderate and extremist elements in the Congress at its special session in Bombay in August 1918 (vide 1919 edition of this book) witnessed the birth of the National Liberal Federation which has since then been the platform of Indian moderate leaders. It held its first session in Bombay in 1918, Sir Surendranath Banerjee presiding. The Federation adopted for its creed the old Congress formula which was not said by the Nagpur Congress.

Those who had held the Federation in high esteem for its moderation, sobriety and balanced judgment suffered a rude shock in 1927 when the Liberal body and its leading lights proved the saying. If you scratch a Liberal you will find an extremist. Liberal leaders had good bye to their avowed principle of co-operation with the Government when they expressed their selves in favour of a boycott of the Royal Commission set up to inquire into the manner

and measure of the country's political advance. About the middle of the year the rumour got abroad that Indians would not be represented on the Commission. Sir Tej Bahadur Sapru started a controversy protesting against such a step. Academic discussions in the Press on the merits of the procedure went on for several weeks until the Viceroy invited all the leaders of the country to a personal interview at Delhi.

His advice fell on deaf ears and his announcement met with adverse criticism. He alluded to the difficulties of securing adequate representation of Indians on the Commission without making it unwieldy drew attention to the fact that the Parliamentarians who constituted the Commission were impartial and able men and formulated a scheme whereby the Legislatures of the country would appoint committees actively to associate themselves with the Commission's inquiry in India and later the Committee of the Central Legislature would have the unique oppor-

unity of placing its views on the Commission's report before the Joint Select Committee of Parliament. Ah but Indians had been excluded from the Commission and it was an insult to the country's honour. The Liberals thereon would have nothing to do with it. They refused to be convinced by the arguments advanced by Lord Birkenhead and others in Parliament in support of the composition of the exclusively Parliamentary Commission. Liberal leaders had committed themselves and the Federation followed them.

An interview given by Lord Sinha was published a few hours before the session actually opened in Bombay under the presidency of Sir T. B. Sapru. The danger of non-co-operation was emphasised by Lord Sinha, but Sir Chimanlal Setalwad (Chairman of the Reception Committee) declared: "The scheme as announced is unacceptable and we cannot take any part in it. He however added: "If fresh proposals or modifications are made we are prepared to consider them with an open mind." Sir Tej Bahadur declared: "The Liberal Party cannot be a party to anything which is inconsistent with the honour and self-respect of India and her moral right effectively to participate in the determination of her constitution; nor can it in its zeal for co-operation with the Government forget its duty to the country in a crisis of this character. Neither our self-respect nor our sense of duty to our country can permit us to go near the Commission."

An attempt on the part of a section of Liberals to dilute the threat of boycotting the Commission from the principal resolution was stifled and a show of unanimity was maintained.

An amendment was on the point of being moved in the open session but was withdrawn. Sir P. V. Sivaswami Iyer's resolution which was adopted unanimously—the opponents remaining neutral—ran: "The National Liberal Federation is strongly of opinion that the official announcement made about the constitution of the Statutory Commission and the functions of the Committees of the Indian Legislatures is unacceptable as it flagrantly denies the right of the Indian people to participate on equal terms in framing the future constitution of the country and that the Legislatures and Indians throughout the country should have nothing to do with the Commission at any stage or in any form." Sir Moropant Joshi, Jaidit, H. Kumar and Mr. C. Y. Chitambar were among the supporters of the resolution. The Federation also appointed a Committee to formulate non-co-operation with similar committees of other organisations in the country a scheme for responsible Government. The usual resolution urging communal unity and advocating joint declarations with reservation of seats for important minorities was adopted. The Federation endorsed a manifesto drafted by the leaders which while recognising Britain's right finally to settle India's constitution reaffirmed the latter's claim to a permanent and durable constitution capable of automatic growth. In winding up the proceedings the Amendment made a long, windy statement roundly accusing Government of non-co-operation with the constitutional party and declaring that the Liberals would have nothing to do with the Commission unless and until the constitution is so revised as to include an equal proportion of Indians and Englishmen.

The Moslem League

The All-India Moslem League came into being in 1906 out of the universal desire among leading Mussalmans at that time for an effective organisation to protect their communal interests. With a view to secure separate Muslim representation in the legislative bodies of the land under the Minto-Morley scheme of constitutional reforms then under discussion Indian Moslems who had been hitherto keeping aloof from politics organised the League. Its original objects were the promotion of loyalty to British Government, the protection of political and other rights of Mussalmans and to place their needs and aspirations before Government in appropriate language and to promote inter-communal unity without prejudice to the other

objects of the League. Moslem opinion slowly advanced and in 1913 the securing of self-government within the British Empire was included in the objects. The League was a powerful and influential body in 1916 and 1917, and what is known as the Lucknow pact of communal representation arrived at between the League and the Congress in 1916 was bodily incorporated in the Government of India Act 1919. The birth of the Khilafat Committee however overshadowed the League which from 1919 had almost disappeared till April 1923 when it met for a brief period under the presidency of the late Mr. Bhurgri but had to be adjourned for want of a quorum. In 1924 however, some influential Moslem leaders like

Mr M. A. Jinnah thought that the Khilafat Committee's functions having ceased in view of the Turkish deposition of the Khalifa decided to revive the League which met under Mr Jinnah's chairmanship at Lahore in May 1924. The Lahore session practically did nothing else save to reorganise the scattered branches of the League.

The Double session.—The 1925 and 1926 sessions of the League were noted for their virility and liveliness. The League gained in strength owing largely to the increased loyalty of Muslims to their communal organisation which has followed the rapid growth of the Hindu Mahasabha the rival Hindu communal organisation. A feeling of separation, distrust and even positive ill will grew up between the two communities which led to later communal riots which in turn aggravated the inimical relations—a veritable vicious circle. Propagandist distribution of the leaves and flies of ether on the political side and the questions of the Hindus playing music before mosques and Mahomedans killing cows on the religious side constituted the points of difference. Suspicion was in the air and communal disturbances were of frequent occurrence. It was in this state of affairs that Mr Jinnah and a few Mahomedans met at Delhi early in the year and offered in the name of the Muslim community to surrender its right to separate electorates in any future scheme of representative government provided certain seats were reserved for the minority community and Hind was constituted a separate province and reforms were introduced in the N. W. F. Provinces and Baluchistan. There was considerable opposition to this both on the part of the Hindus and the Mahomedans. In spite of this and several other paper schemes and compromises and attempts at communal unity plots continued to break out and heads to be broken.

The domestic affairs of the League were equally confusing. Sir Mahomed Shafi, who was elected to preside over the 1927 session agreed

to retire in favour of H. H. the Aga Khan. The latter provisionally accepted the presidency but on arrival in India declined it. Meanwhile the Statutory Commission on Indian Reforms had been set up with no Indians on it and a section of the Mahomedans led by Sir Ali Imam and Mr Jinnah was for boycotting the Commission while an influential section following Sir Mahomed Shafi and Mr A. K. Huznavi advocated co-operation. The boycotters thought that if the session of the League was held at Lahore, the stronghold of Sir Mahomed Shafi, the decision might go against them. A meeting of the League Council was therefore called by the Secretary—who by the way had resigned before calling the meeting—to select the venue of the session and the President. Amid the protests of those who favoured Lahore the Council decided to hold the session at Calcutta. Sir Mahomed Shafi refused to abide by the decision with the result that Mr Jinnah and his supporters including Sir Ali Imam, Sir Abdur Rahim and others held their own session at Calcutta under the presidency of Maulvi Mahomed Yakub, passed a resolution boycotting the Commission, adopted the Congress resolution as the basis of inter-communal unity and finally disavowed the Punjab branch of the League for the offence of refusing to abide by a decision which was held to be ultra vires. Simultaneously with the Calcutta session the All India Muslim League met at Lahore in keeping with the original decision of the League Council. Sir Mahomed Shafi presiding. It was decided to co-operate with the Commission in the Congress formula of communal peace was rejected because it did not properly represent Hindu opinion and agreement to give up separate electorates was made conditional upon the Hindus undertaking to accept their conditions regarding Hind etc. Since the disaffiliation of the Punjab—which was a re-enactment of an exactly similar episode ten years ago—a move is on foot to form a Punjab Provincial League which may be acceptable to the Jinnah League.

The Khilafat Committee.

The Central Khilafat Committee owed its origin to the reference shown by the All India Congress Committee in 1920 to the question of the Khilafat and Non-cooperation. Messrs. Gandhi and Shaukat Ali started this organisation with a view to educative propaganda throughout the country and if possible to capture the Congress. The object of the Committee was stated to be the righting of the Khilafat wrongs. As a result of intensive propaganda mainly led by Mr Gandhi himself prominent Indian publicists supported the view that the Indian Moslems being deeply concerned over the exploitation of the Holy Places of Islam, had a right to expect the Hindus to help them in securing their rights.

Soon after the Madras Khilafat Conference under the chairmanship of Mr Shaukat Ali unfolded a programme of progressive non-cooperation and appealed to the country for support. The Khilafat Committee with the huge funds at its disposal was able to draft in a large number of delegates to the Calcutta special Congress in 1920 when the non-cooperation programme was accepted by that body with two more objects added to it namely, the obtaining of Swaraj and the righting of the Punjab wrongs.

With the deposition of the Khalifa by the Kemalists and the revival of the Moslem League the Committee's activities have been considerably restricted. Recently the Com-

mittee sent a deputation to Nejd to intervene and settle the dispute between the warring elements. Though the Government of India were willing to permit a deputation of the Committee to Turkey, the Turkish Government did not quite like the idea which had consequently to be abandoned.

The 1925 session of the Khilafat Conference was rendered lively by Mr. Hazrat Mohani whose speech strongly criticising Sultan Ibn Saud was subsequently expunged. The resolution adopted by the conference under the Presidentship of Mr. Abdul Kalam Azad condemned the British policy in Iraq and the League's decision on Mosul and declared that if the Turks went to war on the latter issue the Conference would deem it its duty to help them.

Since then we heard little about the public activities of the Committee although many of its domestic quarrels engaged the attention of the public. Funds, however, continued to be collected for the activities of the Committee which could hardly in specified things dragged on until the latter half of 1927 when the leaders found the Khilafat organisation a useful tool for purposes of their propaganda for boycotting the Statutory Commission on Indian Reforms. The visit to India of the King and Queen of Afghanistan lent some importance to the Khilafat Committee which took a leading part in welcoming Their Majesties. Flushed with the enthusiasm which characterised their

reception to King Amanullah—who, by the way after the removal of the Khilafa from his exalted position was proclaimed "King of Islam"—the Khilafists proceeded to Madras to attend the All India Khilafat Conference. Held as it was in the Congress camp, it bore visible traces of the extremist influence of the latter political body. Indeed the professional politicians so arranged things that the Khilafat organisation professed to speak in the name of the Muslims of India—and that at a time when the All India Muslim League itself was rent asunder by a schism—resolved to accept the Simon Commission. The hollowness of its claim to voice the opinion of the community was proved by the first words of the President of the session, Moulvi Mahomed Shafi M. A. who pleaded for keeping the Khilafat Committee alive. Mr. Mahomed Ali urged the need of reviving the Khilafat activities namely the religious, social, political, educational and economic uplift of the community and the safeguarding of the interests of Islam throughout the world. The conference welcomed the Afghan King's suggestion to form an Islamic League, advocated the revival of the Khilafat movement, approved of the efforts made to establish Hindu Muslim unity and above all questioned Britain's right to settle India's destiny and to demand to boycott the Statutory Commission. Thus ended the nearly stage-managed one-day session of the conference.

The Indian Legislature

The Annual Bill session of the Indian Legislature in 1927 commenced in the new Council House on 19 January. His Excellency having on the preceding day opened that the pile of new buildings. The first business was the swearing in of members after the recent general election and the next the election of President and Vice-President. Mr. V. J. Patel, who had been returned unopposed by the Gujarat constituency in which his home is situated was re-elected to the chair and Maulvi Mahomed Yakub was elected Vice-President in succession to Diwan Bahadur T. Rangachariar who had not been returned to the new House.

His Excellency the Viceroy delivered an inaugural address in the Assembly Chamber on 24th January. Lord Irwin informed the Legislature and the country of the despatch of a brigade of British and Indian troops from India to Shanghai showing that the Government of India had in accordance with convention assented to this

step before a decision to adopt it was taken by His Majesty's Government. His Excellency especially dwelt in his address with the Indian constitutional problem. He said he was not infrequently told that the British problem in India was psychological and that many of its difficulties would disappear if once India could be convinced that the British people were sincere in their professed intention of giving India responsible self-government. To carry such conviction to those who remained unconvinced was His Excellency recognised a very difficult task but he told the Assembly that the very instincts of the British led them no alternative but to open to India the path in which they had themselves been pioneers and along which they had led and were still leading their people wherever the British flag was flown. He also pointed out that the British people had pledged before the world their intention to carry out the promises contained in the historical announcement of August 1917. The Viceroy

reiterated that the restraints placed upon the Bengal political detainees had no relation with the question of constitutional advance for the maintenance of law and order was the inalienable duty of every Government however constituted. The detainees were kept under restraint in order to prevent terrorist outrages and would be released the moment Government were satisfied that their release would not defeat this object.

The Viceroy specially referred to the charge of insincerity based on the method of approach which the British Parliament had adopted towards the problem of Indian constitutional development and declared that Parliament was not inspired by any selfish desire to retain power but by a genuine belief that the drum-sticks of history had laid upon it the duty of guiding and assisting India and by a sense that it would be definitely defaulting on these obligations if it surrendered the chance before it was satisfied that it could safely be entrusted to other hands. When Parliament invites India to co-operate in the working of the Reformed Constitution it does not invite any Indian party as it was authoritatively stated the other day to lay aside for the time being its demand for swaraj. It does not desire that any part or individual should frigate the freest and fullest right of criticism and constitutional opposition to any action that it or anyone may take. But it does invite Indian political parties to show whether or not the ultimate structure which Parliament is seeking to erect is unsuitable to Indian conditions and Indian needs. If it sees any large section of Indian opinion however vocal in its desire to further the cause of Indian self-government steadily undermining to the determination to do nothing but obstruct the machinery with which India has been entrusted Parliament is more likely to see in this evidence that the application of western constitutional practice to India may be mistaken than proof of the wisdom of the immediate surrender to India of all its own responsibility. Refusal to play the game because the players did not like the rules would have little effect on Parliament's mind which would on the other hand certainly be influenced if it found legislatures extending responsibilities albeit limited in a spirit of service and tacitly assuming always that their real responsibility was greater than that expressed in the statute.

The question of political detainees has been taken up in the Assembly before His Excellency's address because one detainee, Mr. Satyendra Chandra Mitra, had been elected to the House while a prisoner under the Bengal Criminal Law Amendment Act the Act which was passed to replace the Bengal Ordinance under which a large number of Bengal politicians were placed under restraint by Lord Reading. Pandit Motilal Nehru as leader of the Congress party who were present in strength moved the adjournment of the House on 21 January to call attention to what he termed Government's refusal to allow a regularly elected member to take his seat. He pointed out that detention under the Bengal Act or the Regulation III of 1818 was not a disqualification for election and he asked what would happen if such an incident as he was referring to occurred in England.

The Home Member showed that the Indian Legislature had not the same code of power, privileges and immunities as the legislatures in some other parts of the British Empire and a strong and influential committee which had considered the point concluded that such possible ultimate provisions would at the present time be premature while the Legislature itself only a year ago passed a Bill to regulate such questions and specifically and only exempted a member of any legislative body constituted under the Government of India Act of 1919 from inability to serve as jurors or assessors and from arrest and detention in prison under civil process at the time of meeting of such body or of such committee thereof and during the fourteen days before and after such meeting or sitting. The Home Member referred to the incarceration of Messrs. Dillon Parnell and others under the Protection of Prisons and Property Act 1881 and said it had never been contended that that was a breach of the privilege of the House of Commons. The Congress party pressed the matter to a division and with the help of the parties on the inner left and in the left centre secured a majority of 18.

The general question of political detainees was raised on 3rd February by a Congress member's resolution for the repeal of Regulation III of 1818 and similar enactments and for the release of detainees on amnesty. Pandit Motilal Nehru moved an amendment demanding that all detainees be released or brought to trial. The Home Member reminded the House that such an amnesty as now demanded was given in 1920 with the result that there was a recrudescence of revolutionary crime. He showed how crime of the kind had continued and increased until the passing of the Bengal ordinance of 25th October 1924 since when revolutionary crime had practically ceased though the recent discovery of bombs in Calcutta showed that it was only scotched and not killed. He quoted H. E. the Viceroy's recent statement to the House on the subject and reiterated it as an expression of Government's policy. The debate was continued at considerable length and with some wild speeches one speaker declaring that if he had the power he would stir up every young man to become a revolutionary conspirator and the amendment was finally carried by a majority of 18.

Movements of and efforts to move the adjournment of the House developed into a habit. Mr. Srinivasa Iyengar, President of the Congress, gave notice of such a motion to call attention to the despatch of troops to China a step which had come under much criticism. The President ruled it in order but the Governor General disallowed it under the Rule which prohibits discussions affecting relations with any foreign state. On 2nd February an attempt to move the adjournment on the ground that the non-publication of the Fiji Committee's report was an urgent matter was ruled out by the President because the report was three years old. On 8th February a motion of the kind criticising the Government's ordering of business for the session was carried by 7 votes. On 16th February another concerning the B. N. R. strike at Bhangpur was talked out.

The main items of legislative business during the session were four in number namely a new Steel Protection Bill, a Bill providing for the maintenance of the rupee ratio at 144 gold to the railway budget and the general budget. The current bounty cum tariff protection of the Indian steel industry being due to expire on 1st March 1927 Government instituted a timely inquiry by the Tariff Board with a view to the attainment of future protective measures and the Board reported before the Delhi session recommending a new system of protection for a period of seven years from 1st April 1927 the protection to be by means of increased import duties rather than by the continuation of bounties as the latter would be too costly to maintain. Government introduced a new Bill giving effect to the recommendations and providing for a further inquiry at the end of the seven year period. Its most noteworthy feature for present purposes was its differentiation between Standard and Non Standard steel which in effect is the same as differentiation between British and non-British steel. British steel being Standard and non-British non Standard. The political party members inveighed against this differentiation on the ground as they alleged that it constituted an effort to give British steel makers preference an allocation which Government plainly denied. The Select Committee introduced into the Bill a new provision enabling Government to increase but not to reduce the duties on British steel so as to ensure the continuance of effective protection and the Congress party leading the attack against what was called preference to Britain moved to refer the Bill back to Committee. The effort was defeated in the division lobby after two days debate and after another two days debate was carried without amendment.

The annual Railway Budget showed that the final figures for the year 1926-27 were better than expected but that the revised estimates of the financial results of 1926-27 were disappointing since there had been an appreciable decrease in earnings from passenger traffic and a still larger decrease in earnings from goods traffic. This latter falling off was due to severe floods in Burma and elsewhere to partial failure of the Punjab cotton crop and to the late movement of cotton in Bombay and elsewhere. Hence instead of the originally estimated net surplus of 871 lakhs rupees the surplus now expected was 594 lakhs. The figures made reductions of fares and freight impossible. A memorandum circulated with this budget showed that if the Bill for fixing the rupee ratio at 144 were amended so as to reduce the rupee to 164 the net railway income would be reduced by 61 crores per annum and that the reduction in 1927-28 would exceed 3 crores and convert the estimated surplus of 162 lakhs into a deficit of 160 lakhs. The main criticism of the budget was political namely in support of the demand for the appointment of Indians as members of the Railway Board. The Government reply was that the Board members are technical experts and that there are yet no Indians of the superior railway staff sufficiently knowledgeable and experienced for appointment. A bad feature of the debates was the efforts of the political parties to support their Indian

isation demand by contentions that the Board as at present constituted was guilty of gross mismanagement and that the attack was a gross mistake because its main allocation was in regard to a statement by the Chief Commissioner that at one period of the current year there was a surplus of 30,000 wagons. The critics fastened on to this as an example of unbusinesslike extravagance though the word surplus is a technical expression concerning the day-by-day reserve of rolling stock and in the present case it only meant that on a certain day the traffic return showed that owing to the slackness of traffic noted in the financial statistics wagons to the number mentioned were unemployed. The House carried by 59 votes to 1 a motion to cut the Railway Board vote on the ground of these surplus wagons.

The General Budget for the ensuing financial year was presented to both Houses of the Legislature on 25 February and for the month of March the session showed a surplus the amount of the surplus this time being 370 lakhs rupees a balance which would if the rupee were fixed to 164 be converted into a deficit of 158 lakhs. The report on the Way and Means position was satisfying. It enabled Government to calculate on financing their entire capital programme involving an expenditure of 27 crores rupees and also that of the Provincial Governments and to redeem maturing debt with under 10 crores of new money which it was hoped would be forthcoming on favourable terms. Government were further able to calculate on the avoidance of external borrowing as had been the case since 1913. The Finance Member proposed various changes in the import tariff which at a cost of 6 lakhs loss in revenue would considerably ease the movement of trade and thereafter concentrated the bulk of the surplus to reduction of Provincial contributions. These were accordingly wiped out in perpetuity except as regards 181 lakh and that amount Sir Basil Blackett said should be admitted for the ensuing year by the utilisation of part of the surplus revealed by the final figure of revenue and expenditure for the financial year 1926-27.

The particular ground for criticism of Government which the political parties in the Assembly found in the Budget scheme lay in the inter-connection of the ratio question and the Budget upon one another. As the Budget stood or fell with the 144 ratio the advocates of 164 condemned Government for placing the Legislature on the horns of a dilemma by making it choose between the remission of Provincial Contributions and the lowering of the rupee. The Budget was finally passed in the form in which it was presented subject only to comparatively minor amendments.

The voting of demands for grants was as usual made the occasion for a debate on the general constitutional question. Mr. M. H. Jaisankar a new comer in the Assembly and a Responsive Co-operator moved for the refusal of the demand for a grant to cover the travelling expenses of the Governor General Executive Council. The debate which followed served to emphasize the political communal differences existing between Hindu and Muslim and otherwise concerned the inconveniences of the existing constitution rather than steps which could usefully be taken.

to improve it. There was from the unofficial benches much criticism of the extent to which the Executive Government could disregard the majority votes of the Assembly and of the sense of irresponsibility which this could be held to vitiate on the unofficial side of the House. The Home Member Sir A. P. Muddanani in his reply specially dealt with the latter complaint and said: "No constitution and no country can be run where the Legislature is in permanent conflict with the Executive—something has got to break somewhere and that is the justification and the real justification for the existence of these residuary powers. And that brings me on to the further point which is that the more you force on a Government constituted as we are the exercise of these residuary powers conferred on that Government the more you weaken yourselves and the more you weaken us. You make the exercise of residuary power a thing which you yourselves regard as a very small matter and what is worse you deprive the Government which exercises them of their corresponding sense of the gravity of exercising those powers in the ordinary course of administration. The Jayakar motion was carried by a majority of 4 votes."

The Assembly on the Finance Bill carried by 50 to 48 a Sweigart motion to reduce the **Salt Tax** by half. This would have upset the whole Budget scheme. The Council of State restored the Bill to its original condition and the Assembly concurred in the amendment by 52 to 41. The Assembly divided equally on the Budget proposal to abolish the export duty on hides and the President gave his casting vote in favour of the maintenance of the status quo.

The **Rupee Rate Bill** came on for effective debate and vote during the negotiation of the Finance Bill. Its main provision was to fix the rupee at a ratio equivalent to 8.4751 grains of gold that is the equivalent of 16½ to the rupee and the efforts to reduce the ratio to the equivalent of 16½ gold produced a keener fight than any on the Budget. The leaders of the movement for the depreciation of the rupee were Sir Purshottamdas Thakurdas and Sir Victor Sassoon the former following in this respect his dissent from the majority of the Royal Commission on whose recommendations the Bill was based and Sir Victor being the founder and leader of the Indian Currency League formed for the main purpose of compelling Government to reduce the rupee level. The critical vote resulted in a victory for Government by 74 votes to 85 the largest division list ever recorded in the history of the Assembly. Other divisions were forced by the same opponents of the Bill but the Government majority increased as they proceeded.

There was a noteworthy debate representing Indian interest on the part of unofficial members

of the Nationalist Party on the development of civil aviation in India and the session witnessed the passing or advancement of a quantity of official legislation of other than first rate general interest. The Gold Standard and Reserve Bank Bill implementing the recommendations of the Royal Commission on currency for the institution of an Indian Reserve Bank was introduced and referred to Select Committee.

Private members resolutions were interesting for the feeling of a demand for the establishment of a Supreme Court in India so as to avoid appeals to the Privy Council—though this was only carried by a majority of one vote for the considerable volume of opinion which they revealed in favour of the redistribution of provincial boundaries so as to give more homogeneous provinces and for the insistence of the Council of State on tightening of firm censorship so as to provide better protection of the moral of the people. The parties on the left of the Assembly desired to move a resolution regarding their demand for the immediate grant of full responsible self government but their leaders were not able to ensure a majority vote for it and the matter accordingly allowed to slide. An important unofficial resolution passed by the Council of State was for the appointment of an inquiry into road development throughout India and to this Government assented. Another moved in the Council of State by Sir Kanai Lal Sarkar recommended the undesirability of further constitutional development pending the settlement of the communal question on the basis of common electorates. This met with strong Muslim opposition and was thrown out. With it went a Muslim amendment insisting on communal electorates as a *sine qua non* of further progress.

The outstanding business of the autumn session of the Legislature held in Simla was the passing of legislation for the assistance of the Cotton Textile Industry. Its main provisions were for the free admission of imports of mill stores and machinery a tariff amendment estimated to cost the central exchequer a loss of 84 lakhs of Customs revenue per year and the imposition of a new discriminating duty on yarn imports so as to assist Indian spinning mills in face of acute competition from Japan and China. It was the Viceroy inaugurated the Simla session with an address urgently appealing to the Hindu and Muslim communal leaders to compose their differences and offering to assist them with his personal help if representations inviting him to do were addressed to him. The communal leaders had already summoned a conference on the problem for the following few days and were unprepared to let the initiative pass out of their hands. Advantage was therefore not taken of His Excellency's offer. (The unofficial conference failed.)

The Calendars

A full Calendar will be found at the beginning of this book. Below are given details of the other Calendars in use in India.

The *Jewish* Calendar is in accordance with the system arranged A.D. 358. The Calendar dates from the Creation which is fixed as 3760 years and 8 months before the beginning of the Christian Era. The year is Lunar.

The *Mohammedan*, or era of the Hejra, dates from the day after Mahomet's flight from Mecca which occurred on the night of July 15 622 A.D. The months are Lunar.

The *Fash* year was derived from a combination of the Hejra and Samvat years by the order of Akbar. It is Lunar-solar. The *Hejra's* year seems also to have been related at one time to the Hejra, but the fact of its being Solar made it lose 11 days each year.

The *Samvat* era dates from 57 B.C. and is Lunar-solar. The months are divided into two fortnights—*sadi*, or bright and *badi*, or dark. Each fortnight contains 15 tithis which furnish the dates of the civil days given in our calendars.

PUBLIC HOLIDAYS IN 1928

Parsee (Shehenshahi)

Jamshedi Naoroz	March	-1
Avan Jashan	April	1
Adit Jashan	May	14

BENNETT, COLEMAN & CO S PUBLICATIONS**"DRAINAGE PROBLEMS
OF THE EAST."***(Second Edition)*

BY

C. C. JAMES**Price per set Rupees 25 Post and V P P Re 1-4**

MEMBER of the Institute of Civil Engineers, Fellow of the Royal Meteorological Society, Fellow of the Royal Sanitary Institute. Member of the Incorporated Association of Municipal and County Engineers, Examiner in Sanitary Engineering to the University of Bombay, Author of "Oriental Drainage," "Notes on Sewage Disposal" and "Further Notes on Sewage Disposal." This work issued in two volumes has been thoroughly revised and brought up to date. Mr Carkeek James had the unique opportunity of seeing practically all the large drainage schemes carried out in Bombay and consequently this new edition is almost certain to win the widespread approval of all engineers dealing with kindred problems anywhere East of Suez.

A WONDERFUL ADVANCE
OF GREAT IMPORTANCE TO
FARMERS, LANDOWNERS and ESTATE MANAGERS.

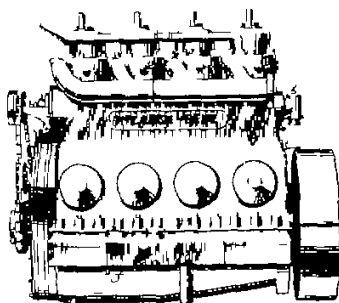

THE CULTIVATING TACKLE THAT HAS REVOLUTIONISED THE
WHOLE AGRICULTURAL WORLD

Cultivating
with
McLAREN
Patent Diesel
Oil
ENGINE
WIND-
LASSES
(Cable System)

Cost per Acre One-third that of any other system

A Light-Weight High-Speed Diesel Oil Engine with Extraordinary
Flexibility

McLAREN BENZ
Diesel Oil Engine

10 B.H.P. at 800 R.P.M.

Weights —

Cast Iron 2,000 lbs. Aluminium 1,600 lbs.

Also a similar Engine 2 cylinders 30
B.H.P. weight 1,200 lbs.

These Engines are mainly suitable for
ELECTRIC GENERATING DRIVING
PUMPS DRIVING AIR COMPRES-
SORS CRANES LIGHT LOCOMO-
TIVES RAIL COACHES MARINE
PURPOSES Etc.

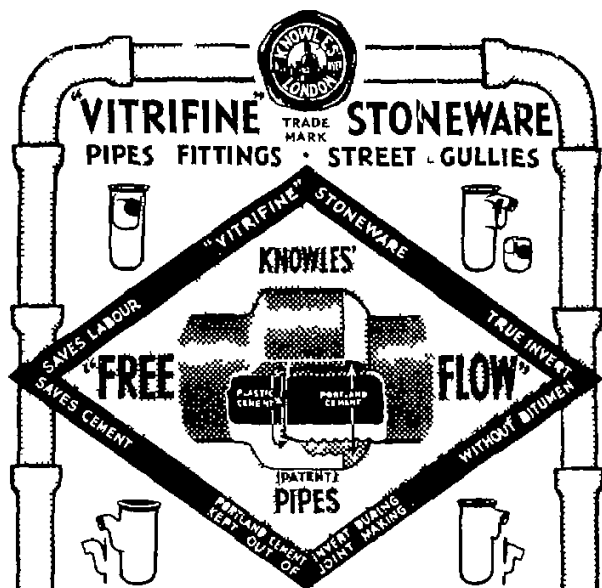

and can also be fitted to our Tractor
Engines and Hauling Tackles

Fuel Consumption Well under $\frac{1}{2}$ Lb per B.H.P. Hour

TYPE COMPOSITION ' COSTS

The initial cost of a machine has to be met by the total value of its product, and this in turn is controlled by the diversity, quality and quantity of output

THE "MONOTYPE"

(The All-purpose Type-Composing Machine)

produces the best quality of composition, of a variety unattainable by any other method it consequently produces for printers the greatest output and highest profits

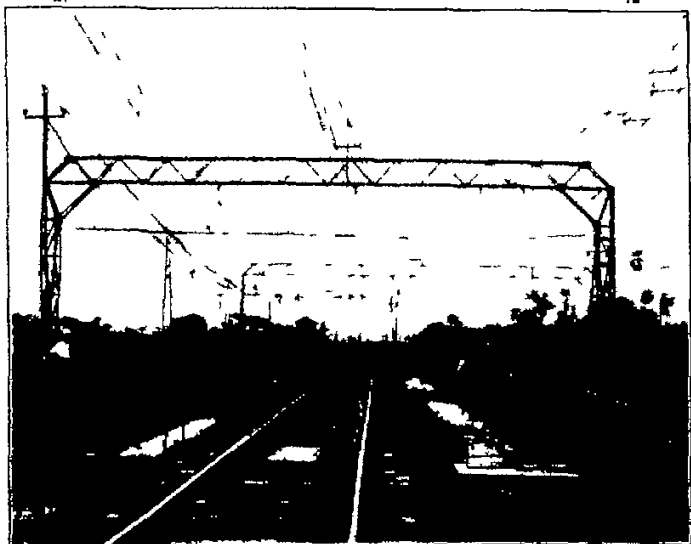

THE LANSTON MONOTYPE CORPORATION
LIMITED

43 and 44 Fetter Lane, London, E C 4

Representative — W J QUIXLEY 27 Waterloo Street,
Calcutta, and P O Box 305, Bombay

Set in ' Monotype Series Nos 110 and 214

Electrification of the Bombay-Baroda & Cen. India Rly.

A further development in the electrification of the suburban railway lines of India was marked by the formal opening, early this year, of the electrified suburban lines of the Bombay Baroda & Central India Railway Co

The contract for both overhead equipment and underground cable was carried out by

BENNETT, COLEMAN & CO'S PUBLICATIONS

**WORKS BY
C. A. KINCAID, C.V.O., I.C.S.**

The Hindu Gods

THE object of this little work is to supply a want which is widely felt among Europeans resident in India, namely a simple little guide book, which will help them to tell at a glance to what God a temple is dedicated or what the little brass images on their own and their neighbours' drawing-room tables represent.

BABU PICHE LAL IN EUROPE

SECOND EDITION

BY THE AUTHOR OF "WAKILI SNIPS AND SNAPS"

Few writers have succeeded so well in caricaturing without offence the idiosyncracies and inconsistencies of the average Indian Babu. Piche Lal is one of the most humourously delightful figures in modern fiction. Europeans and Indians alike will find his eccentricities most entertaining.

Price **Rs 20** By V P P **Rs 26**

SIMLA PAST & PRESENT

By E. J. BUCK, C.B.E.

CRITICISMS ON 2nd EDITION

The Earl of Reading The book will remain on my table among those which I like to contemplate when my eye roves around. The book is full of interest to all lovers of Simla.

The Earl of Lytton A most valuable book of reference.

A valuable book of absorbing interest. The Photographs form a notable feature. (*Pioneer*)

The new edition is by no means a reprint. There are many illustrations and lists of new good stories. (*Statesman*)

Bristles with anecdotes and contains over 90 illustrations. A volume certain to prove a deserved success and a work which should be of lasting value both to the Government and the public. (*Englishman*)

There can be nothing but praise for the tact and good taste Mr Buck has displayed throughout. The whole book is full of good stories from beginning to end and the photographs are excellent. No happenings of importance in Simla's existence remain unrecorded. (*Civil & Military Gazette*)

A fascinating history of Simla. The pages are full of humour and decorated with a long succession of illustrations some beautifully reproduced and clever old cartoons which give lively impressions of the hill life in the old days and of the jokes made about it then as now. A book handsomely printed and bound and very cheap at the price. (*The Times of India*)

NEARLY 100 ILLUSTRATIONS.

Price Rs. 15. V P P Rs. 16

MAPS.

LOWNDES' MAP OF SALSETTE.

CORRECTED UP TO 1913

ENGINEERING, SANITATION, ETC.

THIRD EDITION

SANITATION IN INDIA.

By J A TURNER, CIE, MD, DPH

Late Executive Health Officer Bombay Municipality and

B K GOLDSMITH, MB, DPH, with CONTRIBUTIONS

By S C HORMUSJI LRCP, MRCS, MD, DPH

K B SHROFF LM & S, DPH, DTM, AND

L GODINHO, LM & S, MD, DPH

“THE issue of a third edition of this well-known book will be welcomed by sanitarians in India. Considerable additions have been made in many sections and extensive alterations have been made in the chapters dealing with plague, turbercle, leprosy and influenza, so as to embody the latest discoveries in connection with the etiology treatment, etc., of these diseases. Dr Turner's book is the only one yet published on Municipal sanitation in India of any real value, and no Assistant Director of Public Health or Municipal Health Officer should be without a copy.”—The PIONEER

BIOGRAPHY.

IN TWO VOLUMESTHE LIFE OF
SIR PHEROZESHAH MEHTA.

By H P MODY

The only authoritative work on the life of Bombay's great political leader. The Foreword is written by H H The Aga Khan

Price Rs. 12. By V P P Rs. 13-3 0

Some Press Opinions

Mr H P Mody has written a life of Sir Pherozeshah Mehta which is not merely a valuable biography of a great Indian. It is in addition an important contribution to the political history of modern India."

Manchester Guardian

"The biography is something more than the political career of a great Indian leader. It is a clearly related story of the domestic politics of the country."

The Englishman (Calcutta)

The volumes are provided with life like portraits of Sir Pherozeshah. They are heralded by a brief but most appreciative foreword by His Highness the Aga Khan, who gives his concentrated eulogy on this 'Parsi of Parsis'. They are inscribed to the memory of Mr Mody's deceased brother. To the friends and admirers of the Parsi Knight they are a possession for ever. To the young Indian politician they constitute a healthy guide. To the general reader they afford a most compendious history of our own times limning the imperceptible process of coalescence of East and West."

The Advocate of India (Bombay)

Mr Mody's monograph gives the picture with clearness and illumination for the man of affairs to neglect its lesson were a dereliction of sad consequence."

"THE TIMES OF INDIA ILLUSTRATED WEEKLY" has long been acknowledged to be one of the best edited and most attractive journals in the East. Notwithstanding the high standard attained in the past, the publishers have recently introduced many new features and broadened the scope of the paper generally.

Prominence is given to Indian and other News of more than ordinary interest to India, and these together with the general News of the World are presented in a fully illustrated and most attractive way. Authoritative articles on current politics and kindred matters constitute a regular feature.

Sport and the Drama are ably dealt with by experts. The increasing activities and interests of ladies are given the fullest publicity.

Each issue contains upwards of 100 illustrations reproduced in a style comparable only with the best.

The "Illustrated Weekly" maintains its place as the recognised leading periodical of the East. It is indispensable to those whose interests centre on India and Indian affairs.

If you are not already a subscriber fill in the attached form and forward it to us together with a remittance covering the period for which you desire to subscribe.
